Portugal

Use

In addition to the general functions, there are country/region-specific functions available that comprise a range of features to meet legal requirements and common business requirements in Portugal. These all support you in effectively carrying out your daily business and are explained in detail in this section of the product assistance for Portugal.

i Note

Please consider the following Portugal-specific information for processing your payments/account clearing:

- During payment/account clearing processing, you must use only one customer ID in a payment document.

If more than one customer ID is used in the same payment document, the system stores the different customer IDs at item level in the payment document items, and does not identify a customer ID at document header level.

In such a case, when you generate the SAF-T file, the system will not be able to identify which customer ID to insert in the XML file from item level, and does not find an ID in the document at header level either. In this case, the system leaves the field empty in the XML file, which results in a validation error.

- Do not use the same business partner ID as a customer ID and a supplier ID in the same document.

If you use a business partner ID as customer ID and supplier ID in the same document for payments/account clearing, a validation error comes up when you try to generate the SAF-T file. When you create a payment document during payment/account clearing processing and you use a BP as a customer and also as a supplier, the system creates two BP lines in the payment document. In this case, the BP data is saved at item level. However, when you generate the SAF-T file, the system won't be able to find a BP ID in the payment document header to include in the XML file. In this case, the system leaves the field empty in the XML file, which results in a validation error.

You can use a business partner ID either as customer or as supplier, but not for both in the same document.

- Do not use more than one customer ID or a supplier ID and a customer ID assigned to the line items in the same document.

When the journal entry contains more than one line item, the line items cannot have different customers assigned; or a customer to one line item and a supplier to the other line item. We suggest that you post these items as separate journal entries, not as line items of the same journal entry.

Finance

Taxes (FI-AP/AR)

Customizing

To customize **Taxes** (FI-AP/AR) for use in Portugal, you carry out the activities specific to Portugal in Customizing, using the information provided in the following.

Tax Number

Definition

Use

All companies in Portugal have their own tax number, the NIF number . You use this number for reporting to the tax authorities and you have to display it, along with the company address, on all tax-related documents.

i Note

You have to maintain:

- The NIF number of your vendors in field **Tax Number 1** in your vendor master records
- The NIF number of your customers in field **Tax Number 1** in your customer master records
- The NIF number of your company code in field **VAT registration no.** in your company code global data

Structure

The NIF number has nine digits without any gaps. In Local Version Portugal a check rule has been set for the field **Tax Number 1** . In Customizing for **General Settings** , choose ► **Set countries** ► **Set country-specific checks** ► . **Select** ► PT and choose **Details** .

Taxes on Sales/Purchases

In Portugal, taxes are levied on expenditure. However, exceptions are made for expenditure relating to:

- Exports
- Goods transfer within the European Union
- Education
- Insurance
- Financial services
- Postal services

Tax Code

When you create a company code using the template for Portugal, the system sets up sample tax codes for the calculation procedure TAXPT.

You can either use the tax codes provided or create your own tax codes using them as examples. To create your own tax codes, go to Customizing for **Financial Accounting** under ► **Financial Accounting Global Settings** ► **Tax on Sales/Purchases** ► **Calculation** ► **Define Tax Codes for Sales and Purchases** ► .

i Note

When you customize your tax codes, bear in mind the requirements of your VAT declarations.

Sample Tax Codes for TAXPT

Tax code	Description
A0	IVA suportado aquisição bens CEE 0%

A1	IVA suportado aquisição bens CEE 5%
A2	IVA suportado aquisição bens CEE 17%
E5	IVA suportado 5%
E7	IVA suportado 17%
GA	IVA gasoleo
GS	IVA gasoleo (vsr)
L0	IVA liquidado 0%
L1	IVA liquidado 5%
L2	IVA liquidado 17%
N1	IVA não dedutível 5% (NVV)
N2	IVA não dedutível 17%
ND	IVA não dedutível 5% (NaV) gasole
R0	Regularizações 5%
R1	Regularizações 17%
S0	IVA suportado 0%
S1	IVA suportado 5%
S2	IVA suportado 17%

Related Information

[VAT Declaration](#)

Calculation Procedure

Use

The system calculates taxes on sales and purchases in Portugal using calculation procedure TAXPT, which is supplied with the standard system.

You can either use the control data provided or you can define your own using the data provided as examples. To define your control data, in Customizing for **Financial Accounting**, choose **Financial Accounting Global Settings** > **Tax on Sales/Purchases** > **Basic Settings** > **Check Calculation Procedure** > **Define Procedures** > **Control Data** >

VAT Refund Report

Use

In Portugal, all businesses that are liable to pay value-added tax (VAT) are able to claim a VAT refund from the tax authorities, in accordance with article 2 of the **Despacho Normativo** 342/93 and 470/94. A refund is possible when the VAT that the business has paid and declared is greater than EUR 50,000.

The report, which you submit to the authorities to claim this refund, consists of:

- The [Nota Justificativa do Reembolso](#) , which details all VAT regularization operations that result in you getting a VAT refund
- The [Anexo](#) , which details your company's vendors and customers, and the base amounts and VAT amounts of the relevant purchase and sale transactions

You can use the [Portugal: Income VAT Refund](#) to create the necessary VAT refund report, which you can then submit to the authorities.

Prerequisites

You have maintained your [tax codes](#) , in order to identify the tax rates and VAT types relevant to your company.

Activities

To access the report, from the SAP Easy Access Menu choose ► [Accounting](#) ► [Financial Accounting](#) ► [General Ledger](#) ► [Reporting](#) ► [Tax Reports](#) ► [Portugal](#) ► [Input Tax Refund \(Portugal\)](#) ►

Enter your company code and the fiscal year. If required, enter a document number range

Selection

The selection screen includes the following fields:

- [General selections](#)
- - Enter the correct posting date interval in the fields [Posting date](#) so that the system is able to select the correct period, whether monthly or quarterly
- [Selection of business partners](#)
- If a vendor is linked to another vendor through the field [Fiscal address](#) in the vendor master data, the items of both vendors are added together and listed under the name and tax number of the vendor you entered in the [Fiscal address](#)
- Bank charges
- If you select [Select account for bank charg.](#) , the report also selects payment documents if they contain postings to the bank charges account you enter in the field [Account for bank charges](#) . The amounts are listed under the name and tax number of the house bank that is assigned to the G/L bank account. Therefore, you must make sure that you have assigned a house bank ID to each G/L bank account and that the tax number is maintained for the house bank.
- If you also select [All items of these accounts](#) , the system lists all postings made to the selected G/L accounts, irrespective of whether they were made using the special bank charges functionality or they were posted manually
- [Further restrictions](#)

You can restrict the selected items further by entering minimum amounts. By law, you are allowed to exclude vendors with whom your business transactions amounted to less than EUR 150 during the selected period of time. However, total exclusions may not exceed 5% of the total purchases made during that period.

- For the [Anexo](#) , you define a minimum base amount per vendor and period in the field [Min. base Anexo \(per partner\)](#) , which must be reached before the corresponding vendor is listed. The sum of all amounts that are excluded is printed at the bottom of the [Anexo](#) .
- For the [Nota Justificativa](#) , you define a minimum amount per document in the field [Min. base Nota \(per doc.\)](#) , which must be reached before an item is listed. Items are skipped as long as the maximum amount for exclusions, which you enter in the field [Max. exclusion amount for Nota](#) , has not been reached.
- [Selection according to tax codes](#)
-

- In the field **Tax code for Anexo** , enter the tax codes of the relevant transactions with vendors so that the system selects the correct values, which correspond to the [VAT declaration](#) .
- In the field **Tax code regularization** , enter the tax codes of the relevant postings so that the system selects the correct values, which correspond to fields 40 and 41 of the VAT declaration

i Note

Any item that is listed in the **Nota Justificativa** is not added to amounts listed in the **Anexo** .

Output

For the **Anexo** :

- **Control information: Printout Anexo**
- The **Anexo** is printed on a SAPScript form. You can enter the name of the form in the field **Form for Anexo** . If you do not enter a name, the report uses the default form Forn_PT 1. You can view the output without actually printing the list, by choosing **Print preview** from the **Print** screen.
- If you enter a month in the field **Reporting month** , it will appear on the form, but does not affect the items selected.
- **Periodicity**
- An "X" appears on the form to indicate whether you selected **Quarter** or **Month**
- Direito à Dedução
- An "X" appears on the form to indicate your selections

For the **Nota Justificativa** :

- The list of regularization transactions is output as a standard ABAP list and can be viewed immediately. The **Nota Justificativa** lists only those items posted with the regularization tax codes that you entered under **Selection according to tax codes** .

VAT Cash Accounting Scheme

Use

In Portugal, all companies that have an annual sales volume less than an amount established by law have the option to register for the **VAT cash accounting scheme**. According to this scheme:

- A company that has registered has the privilege to defer the payment of VAT to the tax authorities until they receive payments from their customers and can deduct VAT only once they pay the customers for their services or goods.
- A company that has not registered, but issues invoices to a customer company that has registered for this scheme pays VAT only once they receive the payment.

Company registers for the VAT cash accounting scheme

If your company registers for the **VAT cash accounting scheme**, ensure that you perform the following settings:

- Make relevant settings in the company master by choosing Customizing for **Financial Accounting (New)** under **Financial Accounting Global Settings** > **Enter Global Parameters** . Choose the **Additional Data** push button and specify the value of **Indicator for VAT on Cash (PT)** field as X.

i Note

For this field to appear in the **Additional Data** section of company master, specify the parameter type PTCVAT and description **Indicator for VAT on Cash (PT)** in Customizing view V_T001I ([Parameter Types for Additional Company Code Specifications](#))

Company's customer registers for the VAT cash accounting scheme

If your company is not on the **VAT cash accounting scheme**, but a customer registers for this scheme, ensure that you make relevant settings in the **Maintain Business Partner**(BP) transaction for this customer, following these steps:

1. Create or change the data of the customer in the role FI Customer.
2. Click the **General Data** button and select the **Customer: Country-Specific Enhancements** tab.

i Note

The screen for VAT cash accounting scheme is displayed if the business partner is assigned to a company code which is located in Portugal or has a plant abroad in Portugal.

3. Create an entry with period during which the customer is on the VAT cash accounting scheme and select the **VAT Cash Accounting Scheme** checkbox.

Note that this setting is mandatory for reporting and for printing the payment receipt.

Deferred Taxes

VAT cash accounting scheme requires the use of deferred taxes. For companies on this scheme, this applies for all invoices received and posted. For companies not on this scheme, deferred taxes apply only for invoices for customers on VAT Cash Accounting Scheme. For more information regarding deferred taxes, refer to [Deferred Taxes](#)

Features

Once you make the **VAT cash accounting scheme** relevant settings in the system, you can perform the following activities:

- Report details of incoming payments from a customer, in the **Payments** section available in the output file generated by the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAFT) report (transaction code: FIEU_SAFT).
- Print payment receipts for customers using the **Payment Receipts: VAT on Cash (Portugal)** (FIEUAR_VAT_RECEIPT) report, once you receive payment from customers.

Related Information

[Creating SAF-T Files](#)

[Payment Receipts for VAT on Cash](#)

Payment Receipts for VAT on Cash

Use

You use the **Payment Receipt: VAT on Cash (Portugal)** (FIEUAR_VAT_RECEIPT) report to generate payment receipts for incoming customer payments.

This report is used to generate payment receipts in the following scenarios:

- When a company registers for **VAT on Cash** accounting scheme
- When a company's customers register for **VAT on Cash** accounting scheme

For more information, see the system documentation for this report.

Activities

To access this report, on the [SAP Easy Access](#) screen, choose [Accounting](#) [Financial Accounting](#) [Accounts Receivable](#) [Document Entry](#) [Country-Specific Functions](#) [Portugal](#) [Payment Receipt \(VAT on Cash\)](#).

More Information

[VAT on Cash](#)

Withholding Tax

In Portugal, withholding tax is levied on income from

- Royalties from intellectual or industrial property
- Technical assistance
- Use/transfer/sale of commercial, industrial or agricultural equipment
- Commission
- Other services, for example management services
- Rent from real estate
- Dividends and interest
- Other capital income

Some withholding taxes are only applicable to foreign residents.

To process withholding tax reporting, you can choose [Generic Withholding Tax Reporting](#) (report name: [RFIDYYWT](#)) in the **SAP Client**.

SAF-T

The [Standard Audit File for Tax Purpose \(SAF-T\)](#) report is an electronic exchange XML standard to report business transactional data between companies and external parties such as tax administrations, auditing systems and others.

In Portugal, companies are required to submit SAF-T on yearly or monthly basis as well as for shorter periods of time on request by the tax authorities.

The XML file contains master data and transaction data related to accounting, billing, payments, shipping, and other logistics related processes.

i Note

- This report supports the creation of the SAF-T file only for Portuguese company codes.
- If you are authorized to view the personal data of blocked business partners (BP), the system lets you generate the SAF-T even if blocked BPs are included in your selection criteria. The system also displays details of these blocked BPs in the output message log.
- If you are not authorized to view the personal data of blocked BPs, the system will not let you generate the SAF-T if at least one BP included in the selection is blocked. The system displays an error message and terminates the process.
- You must consider some Portugal-specific information for processing your payments/account clearing. These are explained in more detail in the 'Note' section in [Portugal](#).

[Before You Start](#)

Read this section before you start creating and processing the SAF-T file as it contains information that is prerequisite for the file creation.

[SAF-T File Structure](#)

Find information about the structure of the SAF-T file that can be generated using the SAF-T solution for Portugal.

[Customizing for SAF-T](#)

Find information about the Customizing settings required for using SAF-T functions for Portugal.

[Creating and Processing SAF-T Files](#)

Find information about the steps of creating and submitting the SAF-T file for Portugal and the reports available for managing SAF-T data in the system.

[Definition of Product Data for FI Invoices](#)

Invoices that are not created in the billing system (such as SD) do not have product data. This section explains how product data is collected for the SAF-T file for these invoices.

[Integration with Other SAP Modules](#)

Find out how you can report externally created documents, integrated in the SAP billing application, in the SAF-T file.

[Special Scenarios](#)

Describes special scenarios for SAF-T reporting in Portugal.

[Transaction Type](#)

In accordance with legal requirements in Portugal, in the SAF-T Accounting File and in the SAF-T Integrated File, you must classify journal entry postings based on the transaction type.

[Authorizations for SAF-T](#)

Find information about the authorization objects required for using the SAF-T functions for Portugal.

Before You Start

Read this section before you start creating and processing the SAF-T file as it contains information that is prerequisite for the file creation.

As part of legal requirements on managing accounting and billing procedures for companies that use computerized means (belonging to the Software Certification (Digital Signature) for Invoices and Delivery Documents), you are required to create a standard audit file for tax purpose (SAF-T) every month, or in the year-end closing process, or whenever the tax authorities request it. The creation and processing of SAF-T files in Portugal is not a standalone function, it has certain requirements that you need to fulfill during the fiscal year.

For more detailed information about the implementation of the feature, see the collective SAP Note [1981139](#) .

Before you start creating the SAF-T file, ensure that you have the following functions and processes set:

- You activated the digital signature function in your SAP system.

For details about the function, its prerequisites, Customizing requirements and the supported processes, see [Digital Signature of Invoices](#).

- The ATCUD code is assigned to the relevant documents.

For more information, see [ATCUD in SD and FI Print Layouts](#) and the ATCUD-related Customizing settings in [Customizing for Digital Signature of Invoices](#).

- The QR code is added to the relevant documents.

For more information, see [QR Code in SD & FI Print Layouts](#).

- If your company has self-billing scenarios, the function is set and also the digital signature function is configured for it.

For more information, see [Customizing Digital Signature for Self-Billing Documents \(MM\)](#) and [Self-Billing SAF-T Files](#).

- If special scenarios apply to your company, for example, plants abroad, the digital signature function is set.

For more information, see [Reporting Data on Foreign Companies with Portuguese VAT Registration Number \(Plants Abroad\) in SAF-T](#).

- The SAF-T file can collect data from other SAP modules that are integrated.

For more information, see [Extracting SAF-T Data](#).

For more information about the modules that you can integrate, see [Integration with Other SAP Modules](#).

- In Portugal, specific rules apply to the G/L accounts. So that you can ensure that all your G/L accounts fulfill the requirements, we strongly recommend that you run the **G/L Account Validation** report that checks if the accounting information that is going to be included in the yearly accounting SAF-T file is correct. Run the report even before you close a fiscal year to ensure that the SAF-T file does not contain any incorrect accounting data.

You can access the report, on the **SAP Easy Access** screen, by choosing ► **Accounting** ► **Financial Accounting** ► **Reporting** ► **Standard Audit File for Tax Purposes (SAFT)** ► **GL Account Validation** ► or see SAP Note (KBA) [2907360](#) .

SAF-T File Structure

Find information about the structure of the SAF-T file that can be generated using the SAF-T solution for Portugal.

The SAF-T file is an XML file with different sections that contain data from different areas, for example, accounting, billing, master data, and so on. The content of the file could vary depending on the purpose of the file generation. This means that not all sections may be always included in the generated file.

When creating the SAF-T file, you must be aware of the purpose for which the file is created.

For Portugal you can generate the following files:

- Annual Report for Audit Purposes
- Annual Accounting SAF-T File – this file may be delivered on request
- Monthly File for Invoice Reporting (E-fatura) - this file may also be delivered for periods shorter than one month on request

i Note

The file structure is contained in the official XSD file structure provided by the tax authorities.

The **GeneralLedgerEntries** file section must contain the complete financial accounting data of the company in one file. The file must not be split in smaller files. The **SourceDocument** file section can be split into smaller files.

[Annual Report for Audit Purposes](#)

Find information about the different files that you can generate for the annual report for auditing purposes.

[Annual Accounting SAF-T File](#)

Find information about the annual accounting file that you can generate for year-end reporting purposes.

[Monthly File for Invoice Reporting \(E-Fatura\)](#)

[Special Scenarios](#)

[Transaction Type](#)

[Authorizations for SAF-T](#)

Annual Report for Audit Purposes

Find information about the different files that you can generate for the annual report for auditing purposes.

The annual data shall be provided to the tax authorities upon request and it is part of the year-end closing activities.

The report can be generated in two ways:

- As a single integrated file that contains the complete accounting and billing data (source documents are sales invoices, proforma invoices, payments, movement of goods) in one place, including both transaction and master data.
- As several separate files, for example:
 - An accounting file that contains only accounting data, including both transaction and master data.
 - A billing file that contains only billing data, including both transaction and master data.

i Note

There are different types of billing files according to the issuer of the invoice, for example, standard customer invoices, invoices issued on behalf of a third-party, and self-billing invoices.

You can split the data in the billing file into time periods. The information in the file should cover a whole year and can be further split into separate files.

The table below shows the content of the file according to the type of file:

File Sections

No.	Section	Sub-Section	Description	Belongs to file type (X=included)		
				Integrated	Accounting	Billing
1.1	Header		File header	X	X	X
2.	MasterFiles		Master data*	X	X	X
2.1	MasterFiles	GeneralLedgerAccounts	G/L account master data	X	X	
2.2	MasterFiles	Customer	Customer master data	X	X	X
2.3	MasterFiles	Supplier	Vendor master data	X	X	X
2.4	MasterFiles	Product	Products/services master data	X		X

No.	Section	Sub-Section	Description	Belongs to file type (X=included)		
				Integrated	Accounting	Billing
2.5	MasterFiles	TaxTable	Tax Master Data	X	X	X
3.1	GeneralLedgerEntries	GeneralLedgerEntries	Accounting documents	X	X	
4.	SourceDocuments	SourceDocuments	Source documents	X		X
4.1	SourceDocuments	SalesInvoices	Billing documents	X		X
4.2	SourceDocuments	MovementOfGoods	Delivery/transport documents	X		X
4.3	SourceDocuments	WorkingDocuments	Secondary documents to customers	X		X
4.4	SourceDocuments	Payments	Receipts/payment documents	X	X	X

* master data may be shown as transaction-dependent.

Parent topic: [SAF-T File Structure](#)

Related Information

[Annual Accounting SAF-T File](#)

[Monthly File for Invoice Reporting \(E-Fatura\)](#)

Annual Accounting SAF-T File

Find information about the annual accounting file that you can generate for year-end reporting purposes.

You can use the SAF-T report to generate the annual file that contains accounting data for the whole fiscal year in one file, including both transaction and master data.

The file can be delivered and submitted to the tax authorities upon request.

The file structure is as follows:

File Sections

No.	Section	Sub-Section	Description	Relevant for IES (X=included)
				Accounting
1.1	Header	Header	File header	X
2.	MasterFiles		Master data*	X
2.1	MasterFiles	GeneralLedgerAccounts	G/L account master data	X
2.2	MasterFiles	Customer	Customer master data	X
2.3	MasterFiles	Supplier	Vendor master data	X
2.4	MasterFiles	Product	Products/services master data	
2.5	MasterFiles	TaxTable	Tax master data	X
3.1	GeneralLedgerEntries	GeneralLedgerEntries	Accounting documents	X

No.	Section	Sub-Section	Description	Relevant for IES (X=included)
				Accounting
4.	SourceDocuments		Source documents	
4.1	SourceDocuments	SalesInvoices	Billing documents	
4.2	SourceDocuments	MovementOfGoods	Delivery/transport documents	
4.3	SourceDocuments	WorkingDocuments	Secondary documents to customers	
4.4	SourceDocuments	Payments	Receipts/payment documents	X

* Master data may be shown as transaction-dependent.

Parent topic: [SAF-T File Structure](#)

Related Information

[Annual Report for Audit Purposes](#)

[Monthly File for Invoice Reporting \(E-Fatura\)](#)

Monthly File for Invoice Reporting (E-Fatura)

Find information about the monthly file that you can generate for invoice reporting purposes.

You can use the SAF-T report to generate files with monthly invoice data for tax purposes. The data may be generated in one file or split into separate files, depending on the data volume.

i Note

The monthly file structure follows the structure of the billing file, and that is why by default the generated file contains more data than requested by the tax authorities.

You can submit the generated files every month to the tax authorities by uploading them to the E-Fatura portal. The portal validates the submitted data, discards the data that isn't relevant, and stores only the simplified data.

The table below shows the structure of the monthly file that applies the billing file structure. The sections that are not relevant for the tax authorities are marked as n/a:

File Sections

No.	Section	Sub-Section	Description	Belongs to Billing file type x=included in E- fatura; n/a=not relevant for E- fatura
1.1	Header	Header	File header	X
2.	MasterFiles		Master data*	X
2.1	MasterFiles	GeneralLedgerAccounts	G/L account master data	
2.2	MasterFiles	Customer	Customer master data	X

No.	Section	Sub-Section	Description	Belongs to Billing file type x=included in E-fatura; n/a=not relevant for E-fatura
2.3	MasterFiles	Supplier	Vendor master data	n/a
2.4	MasterFiles	Product	Products/services master data	n/a
2.5	MasterFiles	TaxTable	Tax master data	X
3.1	GeneralLedgerEntries	GeneralLedgerEntries	Accounting documents	
4.	SourceDocuments		Source documents	X
4.1	SourceDocuments	SalesInvoices	Billing documents	X
4.2	SourceDocuments	MovementOfGoods	Delivery/transport documents	n/a
4.3	SourceDocuments	WorkingDocuments	Secondary documents to customers	n/a
4.4	SourceDocuments	Payments	Receipts/payment documents	X

*The complete master data is included in the E-fatura file and when the file is submitted to the tax authorities, the master data which is not relevant is automatically discarded by the portal.

Customizing for SAF-T

Find information about the Customizing settings required for using SAF-T functions for Portugal.

Before performing activities for SAF-T reporting in the system, you must carry out a number of Customizing settings to ensure that the correct data is collected, the correct file format is generated and the correct filling rules are applied.

The settings described in the sections below are prerequisites for using the SAF-T solution for Portugal.

[Making Generic Settings for SAF-T](#)

Learn about the Customizing settings that must be performed for SAF-T functions in Portugal.

[Making Portugal-Specific Settings for SAF-T](#)

Learn about the Customizing settings that are required for SAF-T functions and are specific to Portugal.

Parent topic: [SAF-T](#)

Related Information

[Before You Start](#)

[SAF-T File Structure](#)

Making Generic Settings for SAF-T

Learn about the Customizing settings that must be performed for SAF-T functions in Portugal.

Context

Make the generic settings for the **Standard Audit File for Tax Purpose** (SAF-T) generation in Customizing for **Financial Accounting** under **General Ledger Accounting** > **Periodic Processing** > **Report** > **Statutory Reporting: Portugal** > **Standard Audit File for Tax Purposes (SAFT)** > **Specify Generic Settings for SAF-T** (view cluster: FIEUVC_SAFT, transaction code: S_ERX_29000040).

For more details about the settings, see the Customizing documentation in the system.

Procedure

- Enter 'PT' as the country ISO code

First specify the country under the **Generic Settings** node of the **Dialog Structure**, and then make the relevant settings on the following screens based on your company's business requirements.

- **Specify Generic Information** (this task is mandatory)

On this screen, you specify generic information that you want to include in various sections of the output XML file.

- **Map Document Type to Invoice Type (FI Invoice)**

i Note

The settings in this activity are applied only for those documents that were posted **before** January 1, 2026!

Do not create mappings in this Customizing activity for invoices that were posted on or after January 1, 2026. The system checks the document types that are assigned to number ranges in the **Assign SAF-T Document Types to Number Ranges (FI)** (maintenance view: SIPT_NUMBR_FI_V2) for the invoice data collection into the <SalesInvoice> section in the SAF-T file.

For more details, see the Customizing documentation in the system.

- **Map Material Type to Product Type**

On this screen, you make settings to classify products according to their type: product, service, tax like product, or others, according to the SAF-T definitions.

- **Specify Material Master Data**

On this screen, determine the product master data for the FI invoices if the master data does not exist.

- **Define Material Numbers Based on G/L Accounts**

On this screen, determine the product ID for FI invoices, in case it does not exist.

- **Map Sales Category to Invoice Type**

i Note

The settings in this activity are applied only for those documents that were posted **before** January 1, 2026!

Do not create mappings in this activity for sales documents that were posted on or after January 1, 2026. The system checks the document types that are assigned to number ranges in the [Assign SAF-T Document Types to Number Ranges \(SD\)](#) (maintenance view: SIPT_NUMBR_SD_V2) for the invoice data collection into the <SalesInvoice> section in the SAF-T file.

For more details, see the Customizing documentation in the system.

- [Specify Sales Organizations](#)

On this screen, you can select those sales organizations from which your company's operations are done and whose invoices you want to include in the SAF-T file.

Next Steps

When you completed this task, continue the Customizing with the Portugal-specific settings as described in [Making Portugal-Specific Settings for SAF-T](#).

Task overview: [Customizing for SAF-T](#)

Related Information

[Making Portugal-Specific Settings for SAF-T](#)

Making Portugal-Specific Settings for SAF-T

Learn about the Customizing settings that are required for SAF-T functions and are specific to Portugal.

Context

Make the Portugal-specific settings for the [Standard Audit File for Tax Purpose](#) (SAF-T) generation in Customizing for [Financial Accounting](#) under [General Ledger Accounting](#) > [Periodic Processing](#) > [Report](#) > [Statutory Reporting: Portugal](#) > [Standard Audit File for Tax Purposes \(SAFT\)](#) >.

For more details about the settings, see the Customizing documentation in the system.

Procedure

- Specify business cases (this task is mandatory)

In the [Specify Business Cases](#) (transaction code: S_ERX_29000061, maintenance view: FIEUV_BC_PT) activity, specify the relevant business cases for companies that use the [Standard Audit File for Tax Purpose \(SAFT\)](#) (RPFIEU_SAFT) report to generate the SAF-T file.

- Specify tax code details (this task is mandatory)

In the [Specify Tax Code Details](#) (transaction code: S_ERX_29000062, maintenance view: FIPTV_TAX_DATA) activity, specify tax-relevant information that the system inserts in the XML file according to the SAF-T requirements. The system inserts the tax data in the [MasterFiles](#) / [TaxTables](#) tags and also in the [SalesInvoices](#) section of the SAF-T file.

Note that the SAFT_PT_TAX_DATA maintenance view has been replaced by the FIPTV_TAX_DATA maintenance view. For more information, see SAP Note [3502545](#) .

- Display taxonomy codes

Choose [Taxonomy Codes](#) > [Display Taxonomy Codes](#) > (transaction code: S_ERX_29000076, maintenance view: FIPTV_TAXOCODE). In this activity, you can display the taxonomy codes that indicate the accounting standard associated with each code. Note that you cannot change the data in this activity, you can only display the data.

- Assign taxonomy codes to G/L accounts

Choose [Taxonomy Codes](#) [Assign Taxonomy Codes to G/L Accounts](#) (transaction code: S_ERX_29000077, maintenance view: FIPTV_TAX0ACC). In this activity, you can specify which taxonomy codes apply to the G/L accounts of your company codes.

- Define number ranges for working documents

i Note

The settings in this activity are applied only for those documents that were posted before January 1, 2026.

Do not define number ranges for working documents in this activity for SD invoices that were posted on or after January 1, 2026. The system checks the document types that are assigned to number ranges in the [Assign SAF-T Document Types to Number Ranges \(SD\)](#) (maintenance view: SIPT_NUMBR_SD_V2) for the invoice data collection into the <WorkingDocuments> section in the SAF-T file.

- Define document types for outbound deliveries as invoices

Choose [Source Documents](#) [Define Document Types for Outbound Deliveries as Invoices](#) (transaction code: S_ERX_29000078, maintenance view: FIPTC_INV_SHIPT0). In this activity, you can define which billing types are considered as outbound deliveries. In addition, you can also specify the ship-to partner function that is associated to the outbound delivery.

- Map payment methods to payment mechanisms

Choose [Source Documents](#) [Map Payment Methods to Payment Mechanisms](#) (transaction code: S_ERX_290000101, maintenance view: FIEUD_PAYM). In this activity, map the payment methods customized in the system (specified in an invoice) to the payment mechanism indicators as requested for the SAF-T file.

- Specify details for tax-like materials

Choose [Source Documents](#) [Specify Details for Tax-like Materials](#) (transaction code: S_ERX_29000102, maintenance view: FIPTV_IMAT). In this activity, define special tax conditions for SAF-T reporting.

Note that the SAFTPT_IMAT maintenance view has been replaced by the FIPTV_IMAT maintenance view. For more information, see SAP Note [3735536](#).

- Define down payment documents in FI

Choose [Down Payments](#) [Define Down Payment Documents in FI](#) (transaction code: S_ERX_29000079, maintenance view: FIEUC_FI_DOWNPAY). In this activity, define the document types that you want the system to use as a down payment invoice or a down payment clearing document.

- Define down payment documents in SD

Choose [Down Payments](#) [Define Down Payment Documents in SD](#) (transaction code: S_ERX_29000080, maintenance view: FIEUC_SD_DOWNPAY). In this activity, define which pricing conditions apply to the SD down payment clearing item in an invoice.

- You can use user exits to modify the system logic for the SAF-T data collection

For the details, see [Enhancement Options for SAF-T](#).

Next Steps

If self-billing applies to your company, make settings for self-billing as described in [Setting Up Self-Billing](#).

[Setting Up Self-Billing](#)

Learn about the Customizing settings that are required for setting up self-billing for SAF-T reporting in Portugal.

[Enhancement Options for SAF-T](#)

Enhancement options are available to modify the system behavior while generating the SAF-T file.

Task overview: [Customizing for SAF-T](#)

Related Information

[Making Generic Settings for SAF-T](#)

Setting Up Self-Billing

Learn about the Customizing settings that are required for setting up self-billing for SAF-T reporting in Portugal.

Context

Make the self-billing-related settings for the **Standard Audit File for Tax Purpose (SAF-T)** generation in Customizing for **Financial Accounting** under **General Ledger Accounting > Periodic Processing > Report > Statutory Reporting: Portugal > Standard Audit File for Tax Purposes (SAFT) > Self-Billing**.

For more details about the settings, see the Customizing documentation in the system.

Procedure

- Specify destination for XML file storage

Choose **Self-Billing > Specify Destination for XML File Storage** (transaction code: S_ERX_29000118, maintenance view: FIEUC_SBXML_PATH). In this activity, specify the file path where you want the system to store the generated self-billing SAF-T files for each vendor.

- Generate self-billing files

Choose **Self-Billing > Generate Self-Billing SAF-T Files** (transaction code: S_ERX_29000119, maintenance view: FISAFTPTC_SBINFO). In this activity, specify document types and transaction codes you use when you create self-billing invoices for your suppliers and which are to be reported in the self-billing SAF-T file.

- Specify alternative fiscal year variant (FYV) for self-billing

Choose **Self-Billing > Specify Alternative FYV for Self-Billing** (transaction code: S_ERX_29000120, maintenance view: FIPTV_SB_FYV). In this activity, specify a fiscal year variant that is applicable for a given supplier.

Task overview: [Making Portugal-Specific Settings for SAF-T](#)

Related Information

[Enhancement Options for SAF-T](#)

Enhancement Options for SAF-T

Enhancement options are available to modify the system behavior while generating the SAF-T file.

You can use the **BAdI: User Exits for SAF-T** (FIEU_SAFT_USER_EXIST) Business Add-In (BAdI) to update or modify the default values reported in the XML file generated by the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAFT) report as per customer-specific requirements. This BAdI is called when you execute the report.

For more information about the BAdI and the available methods, see the detailed system documentation in transaction SE18.

You can also access the BAdI and the relevant Customizing documentation in Customizing for **Financial Accounting** under **General Ledger Accounting > Periodic Processing > Report > Statutory Reporting: Portugal > Standard Audit File for Tax Purposes (SAFT) > Business Add-Ins (BAdIs) > BAdI: User Exits for SAF-T** (transaction code: S_ERX_29000125, BAdI definition: FIEU_SAFT_USER_EXIST).

i Note

The BAdI is used for the SAF-T file generation for both Luxembourg and Portugal.

Extracting SAF-T Data

Find information about extracting data necessary for generating the SAF-T file for Portugal.

Prerequisites

- You have made the required Customizing settings as described in [Customizing for SAF-T](#).

- If the RPFIEU_SAFT tables are filled with data from a previous run for the same or for an overlapping period of time, you must first delete it before running the extraction you need, unless they contain the data that you need.

Context

The first step in the SAF-T process is to extract data from your financial and billing system. Data can be extracted for a specific company and for a given time period. This data extraction allows the SAF-T solution to later generate the SAF-T-compliant XML file. Data extraction reads the company's data and writes the selected data to so-called 'extraction tables', which store data to later generate the SAF-T file.

To extract data, you use the [Standard Audit File for Tax Purpose \(SAF-T\)](#) (RPFIEU_SAFT) report.

You can extract the data to the extraction tables for a single period, for the complete fiscal year or for a freely defined interval within the fiscal year. The data extracted includes the following:

- FI transactional data (invoices, credit memos and debit memos)
- SD transactional data (billing documents and deliveries)
- MM transactional data (self-billing)
- FI-CA transactional data (invoices, credit memos and debit memos)
- RE-FX transactional data (invoices, credit memos and debit memos)
- SM transactional data (invoices, credit memos and debit memos)
- IS-M (invoices, credit memos and debit memos)

i Note

- The master data to fill the [Masterfiles](#) section is read directly from the system tables during XML file generation; no specific RPFIEU_SAFT extraction tables are used in this case. Once you delete data from the database tables, the data (including transactional data) is no longer available in the extraction tables. Master data creation is dependent on the transactional data. Thus, if needed, create the XML files before deleting data.
- During extraction, the report also calculates the total values (total entries, total debit and credit).
- If the data volume is high, execute the report in background mode.
- If the tables already contain extracted data, you can only extract data for a specific date interval in order to add data. You cannot run the extraction for overlapping date ranges.
- Your selection for [Extraction Date](#) depends on your Customizing settings for dates ([Specify Business Cases](#) Customizing activity). For more information, see [Making Portugal-Specific Settings for SAF-T](#).

You must adjust the extraction dates to the XML creation date interval you will use. The extraction date interval must match the period of the fiscal year that is reported.

Caution

You can extract the data for a reporting period in separate extractions. But it should cover the whole reporting period without any gaps.

- The SAF-T file for Portugal is always created based on a fiscal year, not on a calendar year. If you use a fiscal year that is different from the calendar year, you must be aware that you cannot create a file based on a calendar year, if the fiscal year goes across years.

Procedure

1. On the [SAP Easy Access](#) screen, go to [Accounting](#) > [Financial Accounting](#) > [Reporting](#) > [Standard Audit File for Tax Purposes \(SAFT\)](#) > [Generate SAFT](#) . Alternatively, you can call the FIEU_SAFT transaction.

2. On the selection screen, under **Options**, choose **Extract Data**.
3. Select the **Extract** radio button to extract data from the database or from the archives, to SAF-T specific tables. The system extracts data to the application tables that are linked to the specified extract module.

Note that the report only supports the extraction of archived data from modules 1 (GL Entries/FI Invoices) and 2 (SD Invoices).

4. In the **Module Selection** group box, specify the relevant extract module based on the type of data (for example, accounting data, billing data) that you want to extract.
5. In the **General Selection** group box, enter the following details:

- Company code for which you want to extract data
- Date range for extraction

If you have already extracted data for a specific module for a company code, then those extraction date ranges will be available in the input help of this field.

- Fiscal year for which you want to extract the data

The SAF-T file can contain data only for one fiscal year.

6. In the **Data Source** group box, specify the relevant source from which data needs to be extracted (**Database** or **Archive**). Sometimes data that needs to be extracted resides both on the database and the archive. In such cases, select the **Database** radio button along with the **Include Archive** checkbox.

7. You can check the generated application log.

The system creates a log that is displayed right after the execution of the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAF-T) report. However, all logs are stored in the system, which you can check later any time. To view the log, use the standard **Analyze Application Log** (SLG1) transaction and define selection parameters. For more details, see [Explanation to Application Log](#).

[Selection Logic for Data Extraction](#)

Selection Logic for Data Extraction

Find information about the type of documents that the system collects to extract and insert in SAF-T report, and the restrictions that apply to them.

Type of Document or Scenario	Description	Exceptions
Digitally signed billing documents and delivery documents	All billing documents and delivery documents must be digitally signed, reported in the SAF-T file, and communicated to the tax authorities. i Note Digital signature is mandatory for all invoice documents. For the extraction, all relevant documents must be digitally signed. If the digital signature is not active for all relevant	Some documents are excluded from the SAF-T file: Reversals Reversal documents of FI and SD invoices are internal documents, not representing a commercial transaction. They are therefore excluded from the SAFT file – file section 4.1. Only the

Type of Document or Scenario	Description	Exceptions
	documents, the data extraction is terminated with an error and the SAF-T file cannot be created.	reversed document is shown in the file with the respective invoice status ('A'). i Note Reversal documents must not use the same number range and document type as the billing documents. - Internal SD documents that are not posted in Accounting These documents are identified by their Posting Status equal D (VBRK - RFBSK) and are automatically excluded from the SAF-T file – file section 4.1. A dedicated number range must be assigned to these documents. - Rebate agreement credit memos These documents are internal and are never printed or issued to a Customer. Therefore, they are excluded from the SAF-T file – file section 4.1, based on their Billing Category equal B or C (VBRK - FKTYT). - Delivery documents replaced by invoices In cases when invoices are sent together with goods shipment, the invoices replace the delivery documents, which are then considered internal documents. Therefore, they are excluded from the SAF-T file - file section 4.2. These documents are automatically excluded if the necessary settings are set up. - POS documents POS documents are automatically excluded (VBRK-FKTYT = 'W') from the Billing SAF-T file, because they must be reported from the POS system in which they are created. - All documents that contain a foreign tax number and belong to foreign companies/company codes that do not have a Portuguese VAT registration number. - All documents that contain a foreign tax number and belong to the foreign plants of a Portuguese company/company code.
Working documents	Some SD documents are automatically reported as Working Documents (file section	

Type of Document or Scenario	Description	Exceptions
	4.3) and not as Sales Documents: - Proforma Invoices identified based on their Document Category equal U (VBRK - VBTP), are automatically included in file section 4.3- WorkingDocuments. No further customizing is needed. Do not customize such documents in the Define Number Ranges for Working Documents (transaction code: S_ERX_29000063, maintenance view: FIPTC_DOC_EXC) activity as this will lead to error. - Working documents according to the settings in the Define Number Ranges for Working Documents (transaction code: S_ERX_29000063, maintenance view: FIPTC_DOC_EXC) activity are considered as Working Documents. If, however, such documents don't have a customer line, they are also excluded from file section 4.3. Only their accounting document is then reported in the SAF-T Accounting file, if applicable.	
Vendors as Customers	When filling the MasterFiles section for Customers (file section 2.2) the program may select data related also to Vendors, provided the respective settings have been done, in order to reflect the Vendors as Customers scenario.

Related Information

[Making Portugal-Specific Settings for SAF-T](#)

Deleting Data Extraction

Find information about removing data from the extraction tables.

Prerequisites

You have made the required Customizing settings as described in [Customizing for SAF-T](#).

Context

You can remove previously extracted data from the extraction tables. You may need to delete extracted data, for example, in the following situations:

- You need to re-extract data that was incorrectly extracted.
- You need to remove gaps from your extraction periods.

- New documents have been posted in the previously extracted period after data in RPFIEU_SAFT was last extracted.
- Customizing settings have been changed and a new extraction is needed with the new settings.
- You have previously created an extraction with incorrect selection criteria.
- Extraction data is no longer needed.
- The table size has reached the storage limits.

To remove entries of extracted SAF-T data from the extraction tables, use the [Standard Audit File for Tax Purpose \(SAF-T\)](#) (RPFIEU_SAFT) report.

For information about how to use the report for deletion, see the field helps (F1) and the system report documentation available under the [Program Documentation](#) button on the selection screen.

i Note

When deleting RPFIEU_SAFT data, you must define the same dates that you used when performing the extraction. Partial deletion is not possible, you can select extracted dates from the input (F4) help.

Procedure

1. On the [SAP Easy Access](#) screen, go to ► [Accounting](#) ► [Financial Accounting](#) ► [Reporting](#) ► [Standard Audit File for Tax Purposes \(SAFT\)](#) ► [Generate SAFT](#) . Alternatively, you can call the FIEU_SAFT transaction.
2. On the selection screen, under [Options](#), choose [Extract Data](#).
3. Select the [Delete](#) operation and specify additional selection criteria as required.

Task overview: [Creating and Processing SAF-T Files](#)

Related Information

[Extracting SAF-T Data](#)

[Creating SAF-T Files](#)

[Downloading SAF-T Files](#)

[Self-Billing SAF-T Files](#)

Creating SAF-T Files

Find information about generating the SAF-T file in accordance with the requirements of the tax authorities in Portugal.

Prerequisites

- You have made the required Customizing settings as described in [Customizing for SAF-T](#).
- You have extracted SAF-T data as described in [Extracting SAF-T Data](#).

Context

When generating the SAF-T file, the system uses previously extracted data to create a compliant SAF-T XML file, ready for submission to the tax authorities.

To create the SAF-T file, you use the [Standard Audit File for Tax Purpose \(SAF-T\)](#) (RPFIEU_SAFT) report.

For yearly reporting, you must create one file, which covers the entire year. Billing files may be created in multiple smaller files, for example, separated per period.

The **annual file** is created either at year end closing or upon request by the tax authorities and must cover the following:

- MasterFiles: GeneralLedgerAccounts, Customer, Supplier, Product, TaxTable
- SourceDocuments: SalesInvoices (Billing and FI Invoices), MovementOfGoods, WorkingDocuments, Payments*
- GeneralLedgerEntries

The file must be handed over to the tax authorities. The deadlines for submission depend on when the file is created – at the end of the year or upon a special request.

Every month a **monthly file** (E-fatura) must be created, which covers the following:

- MasterFiles: Customer and Taxes
- SourceDocuments: SalesInvoices*, Movement of Goods, Payments**

* The 'SalesInvoices' section includes invoices from all applications where invoices are posted, from example, SD and FI.

**Under the 'Payments' section, VAT On Cash (VOC) payments and printed payment receipts are included. For more information, see SAP Note [2377059](#) or in [VAT Cash Accounting Scheme](#).

i Note

When creating a SAF-T file:

- Ensure that you have no extraction gaps for the reporting period.
- You do not need to perform one large extraction for the reporting period, for example, you can have 31 daily extractions for a 31-day month. Check if you have extracted data that covers all the reporting period days.
- You can reuse the extracted data if it is relevant for other reporting files, for example, you can use the extracted data from the E-fatura monthly report for your yearly audit file.

Additionally, ensure that you performed the extraction for:

- A complete period
- The relevant modules
- The relevant data sources (Database/Archive).

Procedure

1. On the [SAP Easy Access](#) screen, go to ► [Accounting](#) ► [Financial Accounting](#) ► [Reporting](#) ► [Standard Audit File for Tax Purposes \(SAFT\)](#) ► [Generate SAFT](#) ►. Alternatively, you can call the FIEU_SAFT transaction.
2. On the selection screen, under [Options](#), choose [Create File](#) and specify additional selection criteria as required, such as the company code, date, fiscal year, tax entity, tax accounting basis, header comment in the generated XML file, or the name of the file to be stored on the application server.

You can only select the following values for [Tax Accounting Basis](#), which determines the data to be included in the SAF-T file:

- C- Accounting

If you select this option, only accounting information is included in the SAF-T file:

- Master data for G/L accounts with the opening and closing balance
- Master data for customers
- Master data for suppliers
- Master data for tax table

- General Ledger entries
- I-Integrated Accounting and Billing

If you select this option, all data is included in the SAF-T file:

- Master data for G/L accounts with the opening and closing balance
- Master data for customers
- Master data for suppliers
- Master data for tax table
- Master data for products
- General Ledger entries
- Source documents (SalesInvoices, MovementOfGoods, WorkingDocuments, Payments)
- F- Billing and P-Partial Billing

If you select this option, only billing information is included in the SAF-T file:

- Master data for customers
- Master data for products
- Master data for tax table
- Source documents

For specific tax accounting basis scenarios, see [Self-Billing SAF-T Files](#), [Reporting Data on Foreign Companies with Portuguese VAT Registration Number \(Plants Abroad\) in SAF-T](#).

You must consider specific rules for the **File Name** field, if you have maintained a directory set in transaction FTWP (see customizing details for FTWP Directory Set). Only the file name (without file path) should be provided, otherwise the XML will be generated in the specified path but will not be accessible from the FTWP transaction. An entry would be present in the transaction FTWP for the file.

Transaction FIEU_SAFT uses the logical path FI_SAFT_FILE_PATH, defined for logical file FI_SAFT_XML_FILE_NAME.

[Explanation to Application Log](#)

Explanation to Application Log

Learn how to check the logs after the creation of SAF-T files, which shows the number of entries created for each master data section as well as for the transaction data

Once the file has been created, the system creates a log that is displayed right after the execution of the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAFT) report. All logs are stored in the system and can be checked later any time. To view the log, use the standard **Analyze Application Log** (SLG1) transaction and define selection parameters as follows:

Field	Value
Object	RPFISAF-T_LOG
Subobject	PT
External ID	You can leave this field blank
From (Date/Time)	Start date of the period for which the RPFIEU_SAF-T report is executed.
To (Date/Time)	End date of the period for which the RPFIEU_SAF-T report is executed.
User	If known, enter the username of the user who executed the report.
Transaction Code	* for any transaction
Program	RPFIEU_SAF-T
Log Class	All Logs
Log Creation	Any
Log Source and Formatting	Format Completely from Database

Once you execute, the report displays a list of all application logs that correspond to the selection criteria.

You can click on an execution to see more details about it, such as terminations, errors, warnings, and information.

Parent topic: [Creating SAF-T Files](#)

Downloading SAF-T Files

Find information about downloading the SAF-T file to your file system.

Context

After you have created your SAF-T file, you can download the SAF-T file to your file system. To do that, you use the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAF-T) report.

Procedure

1. On the **SAP Easy Access** screen, go to **Accounting > Financial Accounting > Reporting > Standard Audit File for Tax Purposes (SAF-T) > Generate SAF-T**. Alternatively, you can call the FIEU_SAF-T transaction.
2. On the selection screen, under **Options**, choose **Download Files** and select the file size under the **Download File** group box that appears.

The system downloads the file using the method you choose and saves the file on your local system. When you choose the **Download File** button, the system automatically selects the default download option **File Size < 300 MB**. If you want to change the download method, choose the **Back** button and specify a suitable download option.

You can select one of the following file size options:

- **File Size < 300 MB** for small to medium files

If you select this option, the system automatically calls report RFASLDPC. To download the SAF-T file, enter data on the selection screen as follows:

Field	Value
Source File	

Field	Value
Source File	This field is prefilled with the generated file, which you can change if required. In this field, you can enter the name that you specified in the File Name field when creating the SAF-T file.
File type	Fill with **
Delete source file	Select if you want to delete the file from the server.
Copy source file	Select if you don't want to remove the file from the server.
Change Byte Order	Leave this field empty
Target File	
Target disk drive	Choose the target drive or choose the Selection of Path and File button.
Subdirectory (hard disk)	Define the target directory
Target file	Define the target file name
Character Set Conversion	
No Character Set Conversion	Select only this radio button from the available options

- o **File Size < 1 GB** for larger files

If you select this radio button, the system automatically calls transaction CG3Y. To download the SAF-T file for Portugal, enter data in the dialog box as follows:

Field	Value
Source file on application server	This field is prefilled with the generated file, which you can change if required. In this field, you can enter the name that you specified in the File Name field when creating the SAF-T file.
Target file on front end	Enter the target path and file name on your local file system.
Transfer format for data	BIN
Overwrite file	Select if you want to overwrite a file that was saved earlier with the same name.

- o **File Size > 1GB** for very large files

If you select this option, the system automatically downloads the file using the DART tool - FTWN. The download is performed based on your Customizing settings and the data you defined when creating the file.

The output shows a log with the directory set you defined and you can find your file under the relevant fiscal year folder. Choose **Export to local File** to download your file to your local file system.

i Note

If downloading the file is not possible due to size issues you can also get it directly from the server.

Task overview: [Creating and Processing SAF-T Files](#)

Related Information

[Extracting SAF-T Data](#)

Self-Billing SAF-T Files

Find information about the concept of self-billing in Portugal and the structural setup of the self-billing SAF-T file.

Self-billing invoices are invoices that a company issues to itself on behalf of the supplier. The self-billing invoices need to be reported in a SAF-T file, in file section **4. SourceDocuments – 4.1 SalesInvoices**.

According to legal requirements of the SAF-T file, the SAF-T file must always be created in the system where the data is created and the documents to be reported are issued.

A company can issue self-billing invoices only when an agreement exists between the seller and the buyer. The self-billing invoices are issued by the buyer in this scenario, however, in practice, sales invoices shall be reported by the seller.

Since the self-billing invoices are created in the buyer's system, the buyer (the issuer of the self-billing invoices) is obliged to create the self-billing SAF-T file. Once the file is created, the buyer sends the file to the supplier who eventually submits it to the authorities.

i Note

If you are a buyer, you need to create one separate SAF-T file for each self-billing supplier for a reporting period. Each file contains the self-billing invoices, product data and vendor data that belongs to the selected supplier.

The self-billing SAF-T file shall not be integrated with any other SAF-T file.

File Structure

The monthly and the yearly file structures differ only very little from the standard billing SAF-T file, the 'F' file (TaxAccountingBasis = F). Except for the differences, the same rules apply as for the billing SAF-T files.

The monthly and yearly self-billing SAF-T files include the following file sections:

- File section 1: Header (data of the supplier company)
- File section 2: Master Data
 - File section 2.2: Customer (data of the invoice issuer – only one entry)
 - File section 2.4: Product (only the products mentioned in the invoices)
 - File section 2.5: TaxTable (only the tax information from the included invoices)
- File section 4: SourceDocuments
 - File section 4.1 – SalesInvoices (self-invoices issued on behalf of the particular supplier mentioned in the Header)

[Creating and Processing Self-Billing SAF-T Files](#)

Find out how you can extract self-billing data and create the self-billing SAF-T file.

Parent topic: [Creating and Processing SAF-T Files](#)

Related Information

[Extracting SAF-T Data](#)

[Deleting Data Extraction](#)

Creating and Processing Self-Billing SAF-T Files

Find out how you can extract self-billing data and create the self-billing SAF-T file.

Prerequisites

Complete the following tasks:

- Define vendors as self-billing vendors

To define a vendor as a self-billing vendor, in the vendor's master data, ensure that the [AutoEvalGRSetmt Del.](#) and [AutoEvalGRSetmt Ret](#) checkboxes are selected on the [Purchasing data](#) tab page.

- Create self-billing invoices **only** by using the transactions considered by the certification for Portugal, listed below.

When the self-billing SAF-T file is created, only those invoices are included in the file that were created with the following certified transactions. All invoices that were created in any other transaction are excluded.

- Vendor Invoice
 - MRRL: Evaluated Receipt Settlement
 - MRNB: Revaluation
 - MIRO: Enter Incoming Invoice
 - MRER: Auto. ERS Automotive
 - MRIS: Settle Invoicing Plan
- Consignment
 - MRK0: Settle Consignment/Pipeline Liabs.

- Make all the Customizing settings that are described in section [Setting Up Self-Billing](#).

Context

The following steps explain to you how you can extract data, create the file and download it. The process is very similar to the one that is explained in [Creating and Processing SAF-T Files](#), extended with some specific information relating to the self-billing files.

Procedure

1. Extract data for self-billing SAF-T file

Proceed as described in [Extracting SAF-T Data](#) and choose Extract Module **9 (Self Billing)**.

After you entered the selection parameters, press **Enter** and the **Self-Billing Extraction Option** group box appears in which you can choose how the report shall extract vendor data:

- **Extract for Selected Vendor**

Choose this option if you want the report to extract data and create the file for specific vendors. If you select this option, also enter the vendor ID or a vendor ID range in the [Self-Billing Vendor](#) field.

- **Create data for All Vendors**

Choose this option if you want the report to extract data and create the file for all your self-billing vendors at once.

2. You can delete the extracted data

If after data extraction you want to delete the extracted data and re-extract it, proceed as described in [Deleting Data Extraction](#) and choose Extract Module **9 (Self Billing)**.

After you entered the selection parameters, press **Enter** and the **Self-Billing Deletion Option** group box appears in which you can choose how the report shall delete vendor data extractions:

- **Delete for Individual Vendor**

Choose this option if you want the report to delete extracted data for specific vendors. If you select this option, also enter the vendor ID or a vendor ID range in the **Self-Billing Vendor** field.

- **Delete for All Vendors**

Choose this option if you want the report to delete extracted data for all your self-billing vendors at once.

3. Create the file

Proceed as described in [Creating SAF-T Files](#) and enter **S (Self-Billing)** in the **Tax Accounting Basis** field.

When you choose **Enter**, the **Self-Billing File Creation Option** group box appears, in which you can choose to create the file for individual vendors or for all vendors.

If you choose **Individual Vendors**, also enter the vendor ID or a vendor ID range in the **Self-Billing Vendor** field. In addition, also provide a file name on the selection screen. If no path is specified, the report stores the file in the physical path location maintained as the logical file path DIR_HOME.

4. Download the file

Download the created file as described in [Downloading SAF-T Files](#).

Task overview: [Self-Billing SAF-T Files](#)

Definition of Product Data for FI Invoices

Invoices that are not created in the billing system (such as SD) do not have product data. This section explains how product data is collected for the SAF-T file for these invoices.

In certain cases, invoices are created and posted directly in the accounting system instead of the billing system. They are called FI invoices. These invoices must also be reported in the SAF-T file. Normally, the goods or services invoiced in FI are not taken from products/services databases, as it is the case in billing systems (such as SD). However, even for such documents the SAF-T file requires master data information of the invoiced product or service to be reported.

The scenario affects invoices posted in FI.

For such invoices, when the information about the invoiced product/service only exists in the document itself and not in a database, in order to adequately fill the respective fields in the SAF-T file, the information has to be derived from the data given in the invoice document.

When you run the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAFT) report, the product data is sent to the **ProductCode**, **ProductGroup**, **ProductDescription** fields in the SAF-T file, in section **MasterFiles**.

The following information regarding the invoiced product or service must be reported in the SAF-T file and must therefore be determined for each invoice.

Explanation of the fields in the XML file

Field in XML file	Explanation
ProductType	Indicator for the product type; for FI invoices, it is generally related to a service. Set 'P' for products, 'S' for services, and 'O' for others.

Field in XML file	Explanation
ProductCode	Unique code to identify the product
ProductGroup	Product group
ProductDescription	Product description
ProductNumberCode	EAN Code. If not available, the field is filled with the Product Code.

[Defining Product Data for FI Invoices](#)

Learn on how the system collects product data for FI invoices for the SAF-T file and what settings you need to make for this.

[Transaction Type](#)

[Authorizations for SAF-T](#)

Defining Product Data for FI Invoices

Learn on how the system collects product data for FI invoices for the SAF-T file and what settings you need to make for this.

Context

When FI invoices do not contain a material reference from the MARA table, the master data of the invoiced product or service can be derived from the revenue account that was posted.

For this scenario, the product data can be found in one of the following ways:

1. You can use the MARA table to maintain the product data needed to fill the MasterFiles/Product section of the SAF-T file, and map it to the respective account or account interval in the **Define Material Numbers Based on G/L Accounts** activity (table PTSAPT_MATACCNT). When creating the SAF-T file, the system finds the respective material master record based on the account posted.

For more information, see [Making Portugal-Specific Settings for SAF-T](#)

2. If the MARA table is not used to maintain the product data, you can use the **Specify Material Master Data (FI Invoices)** activity (table SAFTPT_FIMD) to store the relevant product information for the SAF-T file. You can define all the required information related to the respective account or account interval.

For more information, see [Making Portugal-Specific Settings for SAF-T](#)

i Note

When FI invoices are posted with reference to the product/service master record (MARA-MATNR), the material number field is filled in the document and all product data is called from the MARA table.

i Note

Always be sure to define the product ID in a way to prevent the creation of duplicates to the ones defined in MARA.

Procedure

1. Create invoices
2. The system calls the product code from the PTSAFT_MATAACCNT or from the SAFTPT_FIMD table

❖ Example

When the PTSAFT_MATAACCNT table is used:

FI invoice is posted to the 720020 revenue account.

Entry in the PTSAFT_MATAACCNT table:

Company Code (BUKRS)	GL Account (GLACCOUNT)	Material Number (MATNR)
ABCD	720020	SEC020

Entry in the MARA table:

Material Number	Material Description	Material Group
SEC020	Building Security	Security

Based on the material number, the system searches for the relevant product data in the MARA table.

❖ Example

When SAFTPT_FIMD table is used:

FI invoice is posted to the 720020 revenue account.

Entry in the SAFTPT_FIMD table:

Company Code	GL Account From	GL Account To	Product Code	Product Type	Product Group	Product Description
ABCD	720020	720021	SEC020	S	Security	Building Security

3. The system sends the product data to the SAF-T XML file when you run the **Standard Audit File for Tax Purpose (SAF-T)** (RPFIEU_SAF-T) report.

❖ Example

When the PTSAFT_MATAACCNT table is used:

Product:

- ProductType: S
- ProductCode: SEC020
- ProductGroup: Security
- ProductDescription: Building Security

- ProductNumberCode: SEC020

❖ Example

When the SAFTPT_FIMD table is used:

Product:

- ProductType: S
- ProductCode: SEC020
- ProductGroup: Security
- ProductDescription: Building Security
- ProductNumberCode: SEC020

Task overview: [Definition of Product Data for FI Invoices](#)

Integration with Other SAP Modules

Find out how you can report externally created documents, integrated in the SAP billing application, in the SAF-T file.

When you create invoices in another module that shall be included in the SAF-T file, the system collects these data from the different modules as they are integrated. The following modules are integrated:

- Sales and Distribution (SD)

For more information, see [SAF-T for Delivery Documents](#).

- Billing and Revenue Innovation Management (FI-CA)

For more information, see [Standard Audit Files for Tax Purposes \(SAF-T\) \(Portugal\)](#).

- Flexible Real Estate Management (RE-FX)

For more information, see [Digital Signature of Invoices](#).

- Settlement Management

For more information, see [Processing Settlement Documents for SAF-T](#).

[Integration of External Documents](#)

Find out how you can integrate externally created documents in the SAF-T file.

[Integrating Manual Documents](#)

Find out how you can integrate manually created documents into the SAP system so that they can be included in the SAF-T file.

[SAF-T File Structure](#)

[Customizing for SAF-T](#)

[Creating and Processing SAF-T Files](#)

Integration of External Documents

Find out how you can integrate externally created documents in the SAF-T file.

Documents (for example, invoices) that are issued in another system (with the same or different software) and for business reasons are integrated in the reference billing system are considered as 'external documents'. They are digitally signed and reported in the SAF-T file of the source software.

The integration of such documents is required by the authorities (Despacho 8632/2014). In the SAF-T file, these documents must be identified as 'external documents'. The integration of external documents in the SAF-T file covers documents integrated in through the SD module that are then included in file section 4.1 or 4.3 in the SAF-T file.

i Note

Documents that are integrated in the target system directly in the Financial Accounting component are not relevant for this process.

The SAF-T solution does **not** cover the integration of external transport or delivery documents.

You can integrate external documents in the following ways:

- You can integrate the documents as an aggregated or summary document, for example, as one single document for a given day.
- You can integrate each document individually. In this case, a new target document is created for each source document in the SAP system, but some of the information for the original document is also integrated, such as the document dates, document number, and the digital signature.

[Integration of Aggregated External Documents](#)

Find out how you can integrate documents in the SAP system as one aggregated/summary document.

[Integration of Individual External Documents](#)

Find out how you can integrate documents in the SAP system that were created as external documents.

Parent topic: [Integration with Other SAP Modules](#)

Related Information

[Integrating Manual Documents](#)

[Processing Settlement Documents for SAF-T](#)

Integration of Aggregated External Documents

Find out how you can integrate documents in the SAP system as one aggregated/summary document.

You can integrate several invoices created externally as one single document in the SAP system, for example, by bundling the documents by date. In the SAP system, a new document is created (which is not a copy of any of the original documents) and is handled and identified as an original document in the SAF-T report.

i Note

These documents must have a specific number range and must be digitally signed. The configuration in the [Record Number Ranges for Digital Signature of Billing Documents \(SD\)](#) (SIPT_NUMBR_SD_V view) activity enables these documents to be digitally signed when they are posted. The information is stored in the [Portugal: Digital Signature for Billing Document](#) (SIPT_VBRK) database table.

These documents must not be printed as invoice documents.

The documents are included in the SAF-T file in file structure **4.1 Source Documents** and are identified as a summary document representing documents from another system in the [InvoiceStatus](#) field by filling it with the value 'R'.

To pass this information in the SAF-T file, use BAdI method SET_INVOICE_STATUS_SD. For more information about the BAdI and its methods, see the system documentation of BAdI FIEU_SAFT_USER_EXIST in the system.

Parent topic: [Integration of External Documents](#)

Related Information

[Integration of Individual External Documents](#)

Integration of Individual External Documents

Find out how you can integrate documents in the SAP system that were created as external documents.

Before you start:

- To identify the document type of the individual external documents, maintain the [Define Special Scenario Document Types \(SD\)](#) Customizing activity (view SIPT_SDT_SD_V).

You can access the activity in Customizing for [Sales and Distribution](#) under [Billing](#) > [Billing Documents](#) > [Country/Region-Specific Features](#) > [Country-specific Features for Portugal](#) > [Digital Signature](#) > [Printout Settings](#).

- Ensure that the [Interface Document](#) checkbox is selected in the [Specify Business Cases Customizing](#) activity.

When you choose to integrate each external document one by one, the system creates a new document in the SAP system for each. Although new documents are created, the system integrates the following data from the original documents: document dates, document number, and digital signature. This is necessary to report these documents correctly in the SAF-T file.

However, due to restrictions and validations (legally required for Portugal) in SAP, some differences or validation issues might appear, such as rounding differences between the original and the target document, or validations regarding the chronology and sequencing of the invoice numbering may fail. In such cases, adjustments are needed. For more information, see SAP Note [2166344](#).

Note the following:

Use a specific number range to post these documents. All validations performed on invoices in the SAP system also apply to the invoices that are originated from external documents.

However, for these cases, some of the validations can be switched off using a configuration and a BAdI (see SAP Note [262678](#)). Thus, issues deriving from the chronology of dates and the digital signature can be overcome, provided that the digital signature-relevant information of the original document is integrated in the SAP system using the BAdI.

- If you use the BAdI to fill out the [Portugal: Digital Signature for Interface Billing Document](#) (SIPT_IF_VBRK) database table, do not enter any data manually in the database table.
- If you choose not to use the BAdI, the external documents will be redundantly signed when being replicated in the SAP system. This digital signature will be ignored for SAF-T reporting as only the original information is relevant. If you use this option, you need to fill out the [Portugal: Digital Signature for Interface Billing Document](#) (SIPT_IF_VBRK) database table as follows.

To guarantee that the relevant original data is properly reported in the SAF-T file, ensure that the SIPT_IF_VBRK table is filled with the necessary information from the original document. Check the content of the table below:

OUR_VBELN *	SAP Billing Document
VBELN	Original Billing Document
BUKRS *	Company Code
NRRANGENR	Number Range Number
LEAD_DOCTYPE	Signature PT: Original Leading Billing Document Type
SERIES	Signature Portugal: Original Series
INV_DATE	Signature PT: Original Invoice/Billing Date (Format: YYYY-MM-DD)
SY_DATE	Signature PT: Original System Entry Date and Time
INV_NO	Signature PT: Original Invoice Number
GROSS_TOTAL	Signature PT: Original Gross Amount
PREVPRINT_CHAR	Signature PT: Original Print Characters from the previous invoice
PRINT_CHAR	Signature PT: Original Print Character
CERT_ID	Signature PT: Original Certification ID
KEY_VERS	Signature PT: Original Encryption Key Version
CREAUSER *	Signature PT: Original Created By User
CREADATE *	Signature PT: Creation Date
CREATIME *	Signature PT: Creation Time
CHANUSER *	Signature PT: Changed By User
CHANTIME *	Signature PT: Changing Time
SIGNATURE	Original Digital Signature
INVOICE_STATUS	SAFT: Original Invoice Status
VBELN_LONG	Signature PT: Billing Document - Long
INV_NO_LONG	Signature PT: Invoice Number - Long
ATCUD	ATCUD Code
INVOICE_TYPE	SAF-T Document Type

(*) The marked fields do not need to be filled if you use the BAdI.

In the SAF-T file, the integrated external documents are identified accordingly and some of the fields are filled differently by the program. These are the following:

- The **InvoiceNo** field is filled with the original invoice number from the external system.
- The **HashControl** field in file sections 4.1 and 4.3 is filled by the following logic: certificate number from the original software + dot + version of the certificate of the original software.

❖ Example

9999.1 where 9999 is the certificate and 1 is the certificate version key

- The **Hash** field is filled with the digital signature created in the original software.
- The **SourceBilling** field is filled with value 'I'.
- In case the original software is not certified, the **Hash** field must be filled with 0' (zero) and the **HashControl** field with the expression 'Não certificado'.

Correction documents for external invoices

The external documents must always be corrected in the original system. In the SAP system, the correction invoices (for example, credit memos) are subject to validations and must refer to the invoice they correct. If the corrected invoice is an external document, it is the original information that must be included in the SAFT file as the reference document. The SAFT report checks this in the SIPT_VBRK or in the SIPT_IF_VBRK tables.

If the corrected invoice does not exist in the SAP system at all, its number must be maintained in the **Long external References to Credit memo** (SIPT_CM_EXT_REF) database table so that the validation of the correction invoice (credit or debit memo) does not fail.

Parent topic: [Integration of External Documents](#)

Related Information

[Integration of Aggregated External Documents](#)

Integrating Manual Documents

Find out how you can integrate manually created documents into the SAP system so that they can be included in the SAF-T file.

Context

Documents that are created manually outside of the billing system (paper invoice), for example in case of system downtime, are considered as manual documents that must be integrated into the system so that they can be included in the SAF-T file. The following steps explain what you need to consider to integrate such documents into the SAP system.

Procedure

1. Use a specific number range for the integration
2. Activate the digital signature function
3. Follow special rules during the integration

Fill out the **HashControl** field in file sections 4.1 (**SourceDocuments - SalesInvoices**) and 4.2 (**SourceDocuments - Movement of Goods**) with the following: certificate key version + hyphen + the SAF-T document number, and add value 'M' at the end of the document type (which is part of the SAF-T document number).

❖ Example

1-FTM abc/00995

Where:

- '1' is the certificate key version
- 'FT' is the document type
- 'M' is the added value that identifies the document as 'manual document'
- 'abc' is the series
- '00995' is the sequential number

Task overview: [Integration with Other SAP Modules](#)

Related Information

[Integration of External Documents](#)

[Processing Settlement Documents for SAF-T](#)

Processing Settlement Documents for SAF-T

Find information on how you can include settlement document data in the SAF-T file.

Context

According to legal requirements in Portugal, settlement documents that you create shall contain a digital signature as well as an ATCUD code. These are also essential so that the system can collect the relevant settlement documents when the SAF-T file is created.

Complete the following steps when you create and post settlement documents in Portugal that you then need to include in the SAF-T file. The settlement documents are included in the **Source Documents** section, **SalesInvoices** sub-section as standard billing documents.

Procedure

1. The digital signature function is active

For more information about the function, see [Digital Signature of Invoices](#).

2. Define number ranges for the settlement documents to be digitally signed

You can define number ranges in the [Maintain Number Ranges for Settlement Documents](#) (maintenance view: SIPT_NUMBR_SET_V, transaction code: S_ER9_52001790) Customizing activity.

Note that each document type (invoice, debit memo, credit memo, reversals) must have a unique number range assigned. This ensures that there is no gap in the sequential numbering of the settlement documents.

You can access the activity in Customizing for **Logistics - General** under ► **Settlement Management** ► **Settlement Documents** ► **Country/Region-Specific Settings** ► **Portugal** ►.

3. Assign number ranges to document types and activate digital signature by company code and document type

You can indicate which number range intervals that are used for settlement document types need digital signatures in the [Record Number Ranges for Settlement Documents](#) (maintenance view: SIPT_NUMBR_SET_V, transaction code: S_ER9_52001790) Customizing activity.

You can access the activity in Customizing for **Logistics - General** under ► **Settlement Management** ► **Settlement Documents** ► **Country/Region-Specific Settings** ► **Portugal** ►.

4. Assign SAF-T document types to number ranges of settlement documents

You can assign SAF-T document types to number ranges for which you require a validation code from the tax authorities in the [Assign SAF-T Document Types to Number Ranges of Settlement Documents](#) (maintenance view: SIPT_NUMBR_SETV, transaction code: S_ER9_52003434) Customizing activity. This validation code is part of the ATCUD.

You can access the activity in Customizing for **Logistics - General** under ► **Settlement Management** ► **Settlement Documents** ► **Country/Region-Specific Settings** ► **Portugal** ►.

5. Create and post settlement documents during the fiscal year

You can post settlement documents with a condition contract or as standalone documents. You can use the standard processes and transactions.

In Portugal, when you post settlement documents, the system checks the following:

- The documents are sequentially and chronologically numbered
- There is no negative value in any of the documents
- The date of credit and debit memos are not earlier than the contract start date

You can check the signature of the settlement documents in the [Portugal: Digital Signature for settlement document](#) (SIPT_WBRK) database table.

6. Create a SAF-T file

Follow the instructions that are described in [Creating and Processing SAF-T Files](#).

[Reporting Documents for Portuguese Sales Organizations with Foreign Company Codes](#)

Find out how to report data belonging to Portuguese sales organizations with foreign company codes.

Parent topic: [Special Scenarios](#)

Reporting Data on Foreign Companies with Portuguese VAT Registration Number (Plants Abroad) in SAF-T

Find out how to report data in the SAF-T file on companies that have a foreign company code but also have a Portuguese VAT registration number (plants abroad function).

Prerequisites

To allow the system to collect SAF-T relevant data in a non-Portuguese company code, ensure that the following settings are completed:

- The digital signature function is enabled for non-Portuguese company codes.

For more information, see [Digital Signature for Portugal with Plants Abroad \(SD Only\)](#). You can find more information about the settings for plants abroad in SAP Notes [3000350](#) (relevant for SAP ERP) and [3000401](#) (relevant for SAP S/4HANA).

- The plants abroad function for foreign company codes with a Portuguese VAT registration number was activated for the fiscal year. This is part of the Customizing settings for the digital signature function for plants abroad.
- The ATCUD and QR codes are assigned to your documents that belong to the non-Portuguese company code.

For more information, see the relevant sections in [Customizing for Digital Signature of Invoices](#), [ATCUD in SD and FI Print Layouts](#), and [QR Code in SD & FI Print Layouts](#). The collective SAP Note for ATCUD is [3154599](#).

- In the **Specify Tax Code Details** (maintenance view: FIPTV_TAX_DATA, transaction code: S_ERX_29000062) Customizing activity, define the company code country/region for the relevant tax codes.

Context

As of July 2021, foreign companies with a Portuguese VAT registration number (plants abroad) must report their data in a billing SAF-T file. The plants abroad function in SAF-T allows you to define a local name, address, and VAT number that are different from the ones that are available at company code level. This information is then used to build the SAF-T header. Additionally, the appropriate scope for digital signatures is defined for the related documents, which guarantees consistency between all relevant reporting.

Note that the non-Portuguese scenarios are enabled only for SD and Settlement Management.

Procedure

- Call the **Standard Audit File for Tax Purposes (SAFT)** report

On the **SAP Easy Access** screen, choose **Accounting** > **Financial Accounting** > **General Ledger** > **Reporting** > **Standard Audit File for Tax Purposes (SAFT)** > **Generate SAFT** (transaction code: FIEU_SAFT).

- Extract the plants abroad data

On the selection screen of the report, choose the **Extract Data** radio button, and choose **P (Plants Abroad)** in the **Extract Module** field in the **Module Selection** group box. The whole data extraction procedure is described in [Extracting SAF-T Data](#).

- Create the SAF-T file with the plants abroad data

On the selection screen of the report, choose the **Create File** radio button, and in the **Tax Accounting Basis** field choose either **V - Partial Billing (Plants Abroad)** for partial billing or **W - Billing (Plants Abroad)** for full-year billing.

When the file is generated, the system translates the tax accounting basis into the standard parameters that the tax authorities defined.

SAF-T Selection Period	Tax Accounting Basis	Tax Accounting Basis in the SAF-T File
	The tax accounting basis that you can select on the report selection screen:	The tax accounting basis is translated into the following standard parameters in the SAF-T file as defined by the tax authorities:

Shorter time period than a fiscal year	V	P
Complete fiscal year	W	F

The following sections are filled in the billing SAF-T file:

- [Header](#)
- [Customer](#)
- [Products](#)
- [Tax Table](#)
- [Sales Invoices](#)

The whole file creation procedure is described in [Creating SAF-T Files](#).

Task overview: [Foreign Company Codes \(SD Only\)](#).

Related Information

[Reporting Documents for Portuguese Sales Organizations with Foreign Company Codes](#)

Reporting Documents for Portuguese Sales Organizations with Foreign Company Codes

Find out how to report data belonging to Portuguese sales organizations with foreign company codes.

Prerequisites

To allow the system to collect the data for the Portuguese sales organizations with foreign company codes and insert them in the SAF-T file, ensure that the following settings are completed:

- In the [Specify Generic Settings for SAF-T](#) (view cluster: FIEUVC_SAF-T, transaction code: S_ERX_29000040) Customizing activity, navigate to the **Specify Sales Organizations** sheet.

Enter the country/region of the foreign company code, the foreign company code, and assign a Portuguese sales organization to it.

- In the [Specify Tax Code Details](#) (maintenance view: FIPTV_TAX_DATA, transaction code: S_ERX_29000062) Customizing activity, enter the country/region of the foreign company code and enter all the tax details for the relevant tax codes.
- The digital signature function is enabled and set up at sales organization level for non-Portuguese company codes. This ensures that all documents that belong to the relevant Portuguese sales organizations are digitally signed.

For more information, see [Digital Signature Generation for Sales Organizations in Foreign Company Codes \(SD\)](#), and [Special Scenarios for Activating Foreign Company Codes \(SD Only\)](#).

Context

Companies shall include document details in the SAF-T file that belong to foreign company codes. So that you can do so, you need to specify Portuguese sales organizations in your SAP system and assign the foreign company codes to them. This way you will be able to include the relevant document details in the SAF-T file.

Note that the non-Portuguese scenarios are enabled only for SD. All documents posted under the identified sales organization are considered as relevant for the Portuguese tax authorities.

Procedure

1. Call the **Standard Audit File for Tax Purposes (SAFT)** report

On the **SAP Easy Access** screen, choose **Accounting > Financial Accounting > General Ledger > Reporting > Standard Audit File for Tax Purposes (SAFT) > Generate SAFT** (transaction code: FIEU_SAFT).

2. Extract the data

On the selection screen of the report, choose the **Extract Data** radio button, and choose **2 - SD Invoices** in the **Extract Module** field in the **Module Selection** group box. The whole data extraction procedure is described in [Extracting SAF-T Data](#).

3. Create the SAF-T file

On the selection screen of the report, choose the **Create File** radio button, and in the **Tax Accounting Basis** field choose either **F - Billing** or **P - Partial Billing**.

The whole file creation procedure is described in [Creating SAF-T Files](#).

Task overview: [Foreign Company Codes \(SD Only\)](#).

Related Information

[Reporting Data on Foreign Companies with Portuguese VAT Registration Number \(Plants Abroad\) in SAF-T](#)

[Making Generic Settings for SAF-T](#)

[Making Portugal-Specific Settings for SAF-T](#)

[Creating and Processing SAF-T Files](#)

Transaction Type

In accordance with legal requirements in Portugal, in the SAF-T Accounting File and in the SAF-T Integrated File, you must classify journal entry postings based on the transaction type.

The transaction type value must be entered in the <TransactionType> field of the SAF-T file for the relevant journal entry.

You can define the transaction type using one of the following options:

- You can create your implementation for the FIEU_SAFT_USER_EXIST Business Add-In (BAI) using the BAI method SET_TRANSACTION_TYPE (**Set Transaction type**).
- When using Fiori apps on the SAP Fiori launchpad:
 - When creating incoming invoices, outgoing payments or when you post general ledger entries, you can enter the transaction type value in the **Trans.Type** field of the following apps:
 - **Create Outgoing Payments**
 - **Create Incoming Invoices**
 - **Post General Journal Entries**
 - You can also change this value in the **Manage Journal Entries** app.
- When creating incoming invoices and outgoing payments using single-screen transactions in the SAP Client, you can enter the transaction type value in the **Trans.Type** field of the transactions:
 - **Enter Vendor Invoice** (FB60)
 - **Enter Customer Invoice** (FB70)

When the system generates the SAF-T file, it uses the following procedure to determine the value to be filled in the **TransactionType** field:

1. It checks if the transaction type value is defined in the implementation of the SET_TRANSACTION_TYPE (**Set Transaction type**) BAI method of BAI FIEU_SAFT_USER_EXIST.

2. If the transaction type is not defined in the BAdI implementation, the system checks if there's a transaction type value defined in the **Trans.Type** field of the apps or transactions.
3. If the system does not find any values there, it checks the fields of the relevant journal entry and sets the value of the **TransactionType** field in the SAF-T file to **A** in case either of the following conditions apply:
 - It refers to a closing operation (BKPF - BSTAT field is equal to J).
 - It refers to a posting in a non-leading ledger (BKPF - BSTAT field is equal to L) AND it is a year-end closing posting (BKPF - SUBSET field is equal to GLYC)
4. If none of the above conditions apply, the system sets the value of the **TransactionType** field in the SAF-T file to **N**.

Authorizations for SAF-T

Find information about the authorization objects required for using the SAF-T functions for Portugal.

Ensure that the authorizations are set in the profiles/roles of the users executing SAF-T as follows:

Authorization Object: F_SAFT_BUK

This object enables you to control the authorizations for the execution of SAF-T activities for a specific company code. An authorization check of this object is carried out when the user executes any task involving a company code.

- Fields
 - **BUKRS** - Company Code
 - **ACTVT** - Activity
- Activities
 - **03** - Display
 - **16** – Execute

Authorization Object: F_SAFT_OPR

This object enables you to control the authorizations for extracting and deleting SAF-T data. An authorization check of this object is carried out when the user executes data extraction or deletion.

- Fields
 - **BUKRS** - Company Code
 - **ACTVT** - Activity

- **MODULE** - Extraction Options
- Activities
 - **01** - Extract
 - **06** - Delete

Authorization Object: F_SAF-T_XML

This object enables you to control the authorizations for creating SAF-T files for a specific company code and tax accounting basis. An authorization check of this object is carried out when the user executes any task involving a company code and tax accounting basis.

- Fields
 - **BUKRS** - Company Code
 - **ACTVT** - Activity
 - **ACCBASIS** - Tax Accounting Basis
- Activities
 - **01** - Create or generate

Annual Declaration

In Portugal, companies are required by law to submit the annual declaration and attachments ([Declaração Annual e Anexos](#)) to the authorities before June 30 for the previous year or six months after the end of the fiscal year. The declaration is based on the following laws:

- CIRC (articles 96-A, 105-A, 114)
- CIRS (article 114, no. 1c)
- CIVA (article 28, 1 d) e) f)

The purpose of the declaration is to provide the authorities with comprehensive accounting and fiscal information for fiscal and statistical monitoring.

It consists of a front page and attachments A to P:

- **IRC Anexo A Elementos contabilísticos e fiscais**
- IRC Anexo B Elementos contabilísticos e fiscais
- IRC Anexo C Elementos contabilísticos e fiscais
- IRC Anexo D Elementos contabilísticos e fiscais

- IRC Anexo E Elementos contabilísticos e fiscais
- IRC Anexo F Benefícios fiscais
- IRC Anexo G Benefícios fiscais
- IRC Anexo H Operações com não-residentes
- IRS Anexo I Elementos contabilísticos e fiscais
- IRS Anexo J Rendimentos pagos
- IVA Anexo L Elementos contabilísticos e fiscais
- IVA Anexo M Operações realizadas em espaço diferente da sede
- IVA Anexo N Regimes especiais
- IVA Anexo O Mapa Recapitulativo Clientes
- IVA Anexo P Mapa Recapitulativo Fornecedores

All components can be delivered on paper, via electronic data transfer, or on disk. However, if one of the attachments contains more than one page you can only deliver the declaration via electronic data transfer or on disk.

The SAP System includes reports for the following parts of the declaration:

- [Anexo A IRC Elementos Contabilísticos e Fiscais](#)
- Anexo J IRS Rendimentos Pagos
- Anexo L IVA Elementos Contabilísticos e Fiscais
- Anexo O IVA Mapa Recapitulativo Clientes
- Anexo P IVA Mapa Recapitulativo Fornecedores

You can use the reports either directly in file format or to generate data, which you then need to transfer manually to the form.

Additionally, you can use standard SAP reporting tools such as the Report Painter and the Report Writer to retrieve the data you require to fill out the remaining appendices.

i Note

The complete annual declaration for delivery on disk is produced outside the SAP System. This means that you have to insert the files that can be produced in the SAP System into the declaration. Additionally, for those reports that can be produced in the SAP System but not in the correct file format, you have to transfer the data retrieved either by download or manually.

Withholding Tax Report

Use

In Portugal, businesses provide the authorities with a withholding tax report in the form of appendix J of the annual declaration ([Rendimentos pagos](#)). You can use the [Human Resources](#) (HR) program [Annual Income Declaration](#) to create this report. The program creates a file providing the data you need to complete the official form.

The [Annual Income Declaration](#) provides the General Direction of Taxes ([Direcção Geral dos Impostos](#)) with a list of all payments made and the tax amounts withheld for every employee. The data for income types-dependent work (category A) and pensions (category H) are created in the HR application component. The data from other income types is created in the [Financial Accounting](#) (FI) application component by the generic withholding tax report and stored in table QSTRE. From there the data is exported to HR and integrated with the data provided by HR. (See also the documentation for the [Annual Income Declaration](#) .)

Prerequisites

Make sure that you have defined the valid income types for Portugal. Once you have done this, you assign these codes to the withholding tax codes you have defined in the withholding tax table.

Define the process type and output group.

Features

The generic withholding tax report creates a list of withholding tax withheld for the various income types in FI. Additionally, it stores the necessary data in table QSTRE, from where it is retrieved by the [Annual Income Declaration](#) program.

Activities

To access the generic withholding tax report, from the [SAP Easy Access](#) menu, choose [Accounting](#) > [Financial Accounting](#) > [Accounts Receivable](#) > [Accounts Payable](#) > [Withholding Tax](#) > [Generic Withholding Tax Reporting](#)

In the group box [Output Groups](#) enter the process type and output group that already defined before.

In the group box [Mandatory Selections](#) enter country key PT for Portugal and the reporting period for which you want to declare the data.

Selection

When you have entered the country indicator PT, choose [Enter](#) to display an additional button for entering country-specific selections.

Under [Country specific selection](#), you can enter specific information, which is necessary for the file to be created for the Portuguese withholding tax declaration.

- [QSTRE update](#)

Enter an X if you want to update QSTRE table, otherwise leave it blank.

- [Payment doc. date/Invoice doc. date](#)

You can choose which date of the selected documents will be stored in QSTRE as the posting date (BUDAT). You can choose either the payment clearing date, posting date, or document date, or the invoice posting date or document date. Remember that you can only enter the dates of documents, which will be selected according to your output group settings.

- [Tax department](#)

If necessary, enter the responsible tax department.

- [Ordinary declaration](#)

You can choose which type of declaration you are submitting: ordinary declaration, substitute declaration or supplementary declaration.

- [Declaration ID](#)

Enter the number of the declaration as provided by the tax authorities.

- [Prv. declaration ID](#)

Enter the number of the previous declaration, which you submitted to the tax authorities.

- [NIF of W/T agent](#)

Enter the tax ID of the withholding tax agent.

- [Name of W/T agent](#)

Enter the name of the withholding tax agent.

- [Telephone number](#)

Enter the telephone number of the contact person.

VAT Declaration

Use

In Portugal, all businesses that are liable to pay value-added tax (VAT) must submit a VAT declaration ([Declaração de IVA](#)) to the authorities on both a monthly and annual basis, in accordance with article 28, number 1, sections c) and d) of the VAT code.

- The annual declaration must be submitted by the end of June each year for the previous year's operations. This VAT declaration constitutes [Anexo L](#) of the annual declaration ([Declaração Anual](#)).
- The monthly declaration is submitted once a month during the second month after the transactions have been made. They can also be submitted every quarter.

You use the [Advance Return for Tax on Sales/Purchases: Portugal](#) (RFUVPT00) report to generate the data relevant for either the monthly VAT declaration or the annual VAT declaration, and transfer this information to the VAT declaration forms provided by the Portuguese authorities. You can also use the program to create a correction declaration if you need to replace a declaration form that you submitted previously

i Note

As of June 2007, due to the new IES ([Simplified Company Information - Informacao Empresarial Simplificada](#)) you are required to create simplified annual VAT declarations and group relevant VAT reports in one cluster. You can group Appendix O, P, L, and M and generate an XML file with this report that is required by tax authorities.

As of January 2010, with the new legal regulation Portaria 988/2009, the VAT Declaration was changed as to include more detail regarding particular operations subject to VAT. This leads to more fields and to more record types in the file. The other impact is that the Anexo I (EC-Sales List) has been decoupled from the VAT Declaration being now an independent report.

As of October 2013, according to the legal regulation Portaria nº 255/2013, you must submit two annexes for fields 40 and 41 with the monthly VAT declaration. The annexes report all VAT amounts resulting from VAT corrections per VAT ID. The VAT corrections are documents identified by special tax codes. You must Customize these special tax codes so that corrections are assigned to the external tax groups used in annexes 40 and 41. Fields 40 and 41 show the total amounts per VAT ID from the annexes.

As of July 2017, according to the information published in the tax authority portal, customers can no longer submit the .txt files generated by the report for the monthly declaration. The tax authorities now only accept XML formats. Both the monthly and annual return generate files in XML format. Also, the .txt files from the [VAT Refund](#) report (RFIDPTF010) are now integrated in this report, to create a complete XML.

For more information on how to create simplified VAT declarations with this report, see [Creating Simplified Annual VAT Declarations](#)

Prerequisites

Ensure that you have maintained the following settings:

- Maintained your tax codes, in order to identify the tax rates and tax types relevant to your company
- Grouped your tax balances in Customizing for [Financial Accounting \(New\)](#) under [General Ledger Accounting \(New\)](#) [Periodic Processing](#) [Report](#) [Sales/Purchases Tax Returns](#) [Group Tax Balances](#) [▶](#)
- Assigned external tax group to internal tax group in Customizing for [Financial Accounting \(New\)](#) under [General Ledger Accounting \(New\)](#) [Periodic Processing](#) [Report](#) [Sales/Purchases Tax Returns](#) [Assign External Tax Group to Internal Tax Group](#) [▶](#)

- Maintained article code details in Customizing for **Financial Accounting (New)** under **General Ledger Accounting (New) > Periodic Processing > Report > Sales/Purchases Tax Returns > Country- Specific Settings > Portugal > Maintain Article Codes**
- Maintained tax code details in Customizing for **Financial Accounting (New)** under **General Ledger Accounting (New) > Periodic Processing > Report > Sales/Purchases Tax Returns > Country- Specific Settings > Portugal > Maintain Tax Code Details**
- Maintained special G/L indicators for bad debts in Customizing for **Financial Accounting (New)** under **General Ledger Accounting (New) > Periodic Processing > Report > Sales/Purchases Tax Returns > Country- Specific Settings > Portugal > Maintain Special G/L Indicators for Bad Debts**

Features

Selection

On the selection screen, specify the company code and the fiscal year. If required, enter a document number range.

You can specify additional parameters in the following set of group boxes:

- General Selections

Specify the posting date to define the reporting period

- Mess. Type

- If you wish to generate a list of documents with tax codes that you have not designated in Customizing as relevant for the monthly or the annual declaration, select **List without Tax Return**
- If you wish to generate data for your annual VAT declaration, select **Annual** return and enter the tax grouping version required in the field Version for annual return
- If you wish to generate data for your monthly VAT declaration, select **Monthly** return and enter the tax grouping version required in the field Version for monthly return

- Tax Group Versions

Specify the tax group version that you created for Appendix L and M (for annual VAT declaration)

i Note

You have the following tax group versions for Portugal VAT Declaration Detail (DPIVA):

- DPIVA (record type 04) – detail 1
- DPIVA (record type 05) – detail 2
- DPIVA (record type 06) – detail 3
- DPIVA (record type 07) – detail 4
- DPIVA (record type 30) – detail 5
- DPIVA (record type 31) – detail 6
- DPIVA (annex 40)
- DPIVA (annex 41)

You have the following tax group versions for Appendix R detail, Region 1

- Region -1 (record type 10)
- Region -1 (record type 11)
- Region -1 (record type 12)
- Region -1 (record type 32)

- Region -1 (record type 33)

You have the following tax group versions for Appendix R detail, Region 2

- Region -2 (record type 10)
- Region -2 (record type 11)
- Region -2 (record type 12)
- Region -2 (record type 32)
- Region -2 (record type 33)

- Detail Parameters

To include FI-CA data in the VAT declaration, select the **Include FI-CA** checkbox. To establish a connection to a remote system that is outside your system landscape, enter the RFC destination.

- File Parameters

Specify the name and location of the VAT Refund report .txt file to be integrated into the XML output for the VAT Declaration:

VAT Refund File Name (Local)

VAT Refund File Name (Server)

- Output Type

Depending on the level of information you require, select any combination of the following:

- **Tax groups**, if you want the tax balances at tax group level in each frame
- **Tax code**, if you want the tax balances at tax code level in each frame
- **Documents**, if you want the tax balances at document level in each frame
- **NIF ANEXO 40 & 41**, if you want a detailed list output for annex 40 & 41
- **NIF ANEXO 40 & 41 (FI-CA)**, if you want a detailed list output of FI-CA data for annex 40 & 41

Some tax codes may not belong to any frame. Therefore, you should make sure that all entries have been made in the tables and check whether the tax codes in question are relevant for other tax declarations. If you need to submit a correction declaration, create the report as above and transfer the data to the relevant form for correction declarations.

Your tax balance groups appear in the respective fields of the XML file, which correspond to the official definition of the tax group version given by the tax authorities in an XSD file.

Activities

To access the report, on the **SAP Easy Access** menu, choose ► **Accounting** ► **Financial Accounting** ► **General Ledger** ► **Reporting** ► **Tax Reports** ► **Portugal** ► **Advance Return for Tax on Sales/Purchases** ►.

Grouping Tax Balances

Use

You have to group your tax balances by tax code and transaction key so that each group appears in a separate, numbered frame on your [VAT declaration](#), in accordance with Portuguese legal requirements.

Procedure

To group your tax balances:

1. In Customizing for **Financial Accounting**, choose **General Ledger Accounting** > **Business Transactions** > **Closing** > **Reporting** > **Sales/Purchases Tax Returns** > **Group Tax Balances**.
2. Enter country key PT.
3. Create a code for your **Tax grouping version**. The tax grouping version identifies different groups of tax codes and transaction key for your record types. You should create one version for the annual declaration and some separate ones for the monthly declaration.

For the monthly declaration, you need to create a separate version for each of the file segments that you need to include in the VAT declaration, for example Declaration Frontpage, Appendix R, Appendix I, List of Customers, and so on.

Tax grouping version A4: Annual declaration for mainland Portugal, Madeira, Azores
4. Enter the tax codes concerned in the field **Tx** and the relevant transaction keys in the field **Trs**. The system automatically enters the tax code description in the **Description** field.
5. In the field **Gp No**, enter a freely-definable, two-digit number to identify the tax group to which the tax code and transaction key belongs. This internal number represents a frame on your tax return. The system enters the balance of all the tax amounts belonging to this group in this frame.

You should enter 3-digit labels (tax group identifiers) on the declaration with only 2 digits (for example, enter 263 field with the 63 tax group identifier).
6. Enter either a plus sign or a minus sign in the field **ArithmOper** to indicate whether the tax value should be added to or subtracted from the other tax values belonging to the same group number.
7. Save your data.

i Note

Do not enter any values in the field **Bal**.

When you have made these settings, the system is able to fill out the respective fields of each tax balance group in the VAT declaration XML file.

You now assign the internal group numbers you defined in step 4 to official tax group numbers, which identify the frames on the actual VAT declaration form. To do this:

1. In Customizing for Financial Accounting, choose **General Ledger Accounting** > **Business Transactions** > **Closing** > **Reporting** > **Sales/Purchases Tax Returns** > **Assign External Tax Group to Internal Tax Group**.
2. Enter **Country key** PT and the relevant **Tax grouping version** (see step 2 above).

You should create one version for each tax grouping version you have created during tax balance grouping (see steps above).
3. In the field **Gp no**, enter each internal group number that represents a frame on the tax return (see step 4 above).
4. In the field **ExTxGrpNo**, enter the official three-digit tax group number to which you want to assign your internal group number.
5. In the field **Text**, enter a description of the frame contents and save your entries.

Result

When you make these Customizing settings, the system is able to display each tax balance group, along with its official tax group number, in a separate frame on the list.

Creating Simplified Annual VAT Declarations

Use

If you want to combine Appendices O, P, L, and M in one [VAT declaration](#), proceed as follows:

Procedure

1. Run the **Annual Sales Return to Tax Office → File** report.

To access the report, on the **SAP Easy Access** screen, choose **Accounting > Financial Accounting > General Ledger > Reporting > Tax Reports > Portugal > Annual Sales Return to Tax Office → File**.

In the **Output Control** group box:

- Enter the Data Medium Exchange Engine (DMEE) format tree PT_ANEXO_P_O
- Select the **File Output** indicator
- Specify the file name on which you want to save the generated output file
- Execute the report

2. Run the **Advance Return for Tax on Sales/Purchases** report.

To access the report, on the **SAP Easy Access** screen, choose **Accounting > Financial Accounting > General Ledger > Reporting > Tax Reports > Portugal > Advance Return for Tax on Sales/Purchases**.

Since you need to submit the simplified VAT declaration in XML format, in the **Annual File** tab page,

- Select the **XML File Output** indicator, and the report generates an XML file
- Enter the name of the output file you have generated with the **Annual Sales Return to Tax Office → File** report as described in step 1
- Enter the Data Medium Exchange Engine (DMEE) format tree PT_ANEXO_L_M

The report generates the VAT declaration in an XML format, which includes all the Appendices L, M, O, and P. You submit the file to the tax authorities using the application provided by the authorities for this purpose. This application also allows the validation of the file.

Annual Business Volume Report

In Portugal, all businesses that are liable to pay value-added tax (VAT) must report on business volume to the authorities in June every year, in accordance with article 28, number 1 section e) of the VAT code. This report (**Mapa Recapitulativo de Fornecedores e Clientes**) is part of the annual declaration (**Declaração Anual**).

It consists of the following:

- **Anexo O** detailing the amount of business conducted with customers
- **Anexo P** detailing the amount of business conducted with vendors

You can use the **Annual Sales Return to Tax Office (Portugal) -> File** to generate the relevant data for both **Anexo O** and **Anexo P** and transfer this information to the forms provided by the Portuguese authorities.

Prerequisites

You have maintained your [tax codes](#) in order to identify the tax rates and VAT types relevant to your company.

Features

You can specify whether the system calls only those transactions that are equal to or exceed a certain amount.

i Note

It is usual for businesses to list only those customers and vendors with whom the transactions subject to VAT have exceeded EUR 50,000.

Activities

To access the report, from the SAP Easy Access Menu choose ► **Accounting** ► **Financial Accounting** ► **General Ledger** ► **Reporting** ► **Tax Reports** ► **Portugal** ► **Annual Sales Return to Tax Office (Portugal)** -> **File** ►

Enter your company code and the fiscal year. If required, enter a document number range

Selection

The selection screen includes the following fields:

- **General selections**
- You can enter the **Posting date** or the **Reference number** to restrict your selection
- **Report parameters**
- If required, in the field **Tax office responsible** you can enter a code for the tax office to which you are reporting
- Select **Substitute return** if you wish to replace a form that you have previously submitted with a new one
- Enter the appropriate tax codes in the **Tax code** fields. This ensures that the system calls only VAT-related documents
- **Output control**
 - Depending on whether you wish to report on transactions with customers or on transactions with vendors, select either **Report customer sales** or **Report vendor sales**
 - To create a file, enter PT_ANEXO_P_0 in the **Format Tree** field.
- In the field **Amount limit (in thousands)** you can specify an amount so that the system selects only those transactions that are equal to or exceed this figure, and rounds off the amount to the nearest thousand
- All items and down payments that affect the value of the business are taken into account. If you want to exclude down payments, select **Ignore down payments**
- If you wish to write the output to a file, select **File output** and enter the name of the file in the field **Output file name**

i Note

If the output is written to a file, the path and the file name must be given in the correct format for the operating system of the application server.

Add Discount to Total Purchase Amount

You can use the Business Add-In **BAdI: Change Discount in Total Purchase** to add the discount to the total purchase amount when you have a payment document that clears both vendor invoice and vendor credit memo (including discount).

This BAdI definition contains the **ADD_VEND_CREDIT_MEMO_DISCOUNT** method that uses the exporting parameter **EV_FLAG_ADD_VALUE**. If this parameter has the value X, then the **Annual Sales Return to Tax Office (Portugal)** (RFUMPT00) report uses this value to add the discount to the total purchase.

You can execute the BAdI in Customizing for **Financial Accounting (New)** under ► **General Ledger Accounting (New)** ► **Periodic Processing** ► **Report** ► **Sales/Purchases Tax Returns** ► **Country-Specific Settings** ► **Settings** ► **Business Add-Ins (BAdI)** ► **BAdI: Change Discount in Total Purchase** ►

Include Documents in Annex 40 and Annex 41

You can use the Business Add-In [BAdI: Modify Annex 40 and Annex 41](#) to do the following:

- Retrieve details of special types of documents (these documents are not available in the standard SAP tables)
- Report these documents in the Annex 40 and Annex 41 sections of the output file generated by RFUVPT00 report.

The BAdI is called when you execute the [Advance Return for Tax on Sales/Purchases \(Portugal\)](#) report.

You can execute the BAdI in Customizing for [Financial Accounting \(New\)](#) under [General Ledger Accounting \(New\)](#) [Periodic Processing](#) [Report](#) [Sales/Purchases Tax Returns](#) [Country-Specific Settings](#) [Settings](#) [Business Add-Ins \(BAdI\)](#) [BAdI: Modify Annex 40 and Annex 41](#)

General Ledger Accounting

Central Bank Reporting

Use

You use the [Central Bank Reporting \(Portugal\)](#) (RFFOPT_CBR) report to generate an XML file for the Bank of Portugal (BoP). This XML file includes the following details:

- Account balances of your company's house banks, foreign customers, and foreign vendors
- Foreign payment transactions carried out by your company

For more information, refer to the system documentation for this report.

To access this report, on the [SAP Easy Access](#) screen, choose [Accounting](#) [Financial Accounting](#) [Banks](#) [Periodic Processing](#) [Portugal](#) [Central Bank Reporting](#) [Generate XML for Bank of Portugal](#).

Activities

To add your financial statement version (FSV), open transaction SM30 and add your entries in the FIAPPTV_FSV table.

BAdI: Include Additional Details in Output

You can use the Business Add-In [BADI_RFFOPT_CBR](#) to include the following details in the output file that the system generates on the execution of Central Bank Reporting (Portugal) (RFFOPT_CBR) report:

- G/L postings (foreign transaction details recorded in G/L accounts other than customer and vendor accounts)
- Values of the following fields:
 - NPC2: ID of the company that pays customers or vendors on behalf of your company
 - PAIS_ATIVO: Country of the financially active entity
 - ID_BANCO: First four characters of the house bank key

In addition, you can use this BAdI to include records associated with the followings scenarios in the output XML file:

- When multiple banks accounts are associated with a payment document
- When G/L postings happen through bank accounts

Assign SCB Indicators (Transaction Code: FIAPPT_BAL)

Use

You use this transaction to assign the **State Central Bank** (SCB) codes issued by the **Bank of Portugal** (BoP) to a company's foreign vendors, foreign customers, and house banks.

For each vendor account, customer account, and house bank ID, you can assign separate SCB indicators, one to identify the credit and the other to identify the debit to these accounts. While reporting the balances of your company's foreign vendors, foreign customers, and house banks, the system includes the SCB indicators assigned to these accounts in the output file. This is to comply with the BoP's requirement that only absolute values should be included in the output file.

Activities

To access this transaction, on the **SAP Easy Screen**, choose **Accounting** > **Financial Accounting** > **Banks** > **Periodic Processing** > **Portugal** > **Central Bank Reporting** > **Assign SCB Indicators** .

Example

Assign SCB Indicators to a Vendor Account

Company Code	Acc No	Acc Type	Debit/Credit	SCB Indicator
PT01	VEN1	Vendors	Debit	00164
PT01	VEN1	Vendors	Credit	00165

The above mentioned entries indicate the following:

- SCB indicator 00164 in the output file indicates a debit in the vendor account VEN1
- SCB indicator 00165 in the output file indicates a credit in the vendor account VEN1

Assign SCB Indicators to a Customer Account

Company Code	Acc No	Acc Type	Debit/Credit	SCB Indicator
PT01	CUS1	Customers	Debit	00167
PT01	CUS1	Customers	Credit	00168

The above mentioned entries indicate the following:

- SCB indicator 00167 in the output file indicates a debit in the customer account CUS1
- SCB indicator 00168 in the output file indicates a credit in the customer account CUS1

Assign SCB Indicators to a House Bank

Company Code	Acc No	Acc Type	Debit/Credit	SCB Indicator
PT01	HB01	G/L Account	Debit	00169
PT01	HB01	G/L Account	Credit	00170

The above mentioned entries indicate the following:

- SCB indicator 00169 in the output file indicates a debit in the house bank HB01
- SCB indicator 00170 in the output file indicates a credit in the house bank HB01

Assign Common SCB Indicator

Company Code	Acc No	Acc Type	Debit/Credit	SCB Indicator
PT01	*	Vendors	Debit	00184
PT01	*	Customers	Debit	00185
PT01	*	House Bank	Credit	00195

If you want to assign the same SCB indicator to indicate debit to all vendors in a company code, make entries as shown in the above table. The value * indicates that the assigned SCB indicator 00184 indicates debit and is valid for all vendors in company code PT01. However, in addition to the above entries, if you explicitly maintain SCB indicators for specific vendors (in the same company code), the system would consider these values for those vendors instead of the common SCB value.

Data Management in Central Bank Reporting

In this section, you can find the functions available for managing your data.

Related Information

[Data Management in SAP S/4HANA](#)

Archiving

Use

Data archiving removes from the database application data that is no longer required, and places it in archive files that can be accessed or deleted at a later date.

The system enables you to archive documents, in accordance with the Portuguese requirements for Central Bank Reporting. These documents are archived using archiving object FI_CBR_PT, which is supplied for Portugal. This archiving object always consists is used for archiving the data in the following tables:

- RFIAPPTD_RUNID: identification of the CBR (header)
- RFIAPPTD_TRANS: transaction details of the CBR
- RFIAPPTD_BALANCE: balance details of the CBR

Prerequisites

Ensure that you have executed any relevant workbench customizing for the archiving object (FI_CBR_PT) and ILM object (FILOC_ILM_CBR_PT).

Features

The system carries out checks for personal data within transaction and balance details within **Central Bank Reporting**.

Activities

From the SAP Easy Access menu, choose **Tools > Administration > Administration > Data Archiving**

Enter the object name FI_CBR_PT. You can then archive, delete, and read documents from the archive. To display archived accounting documents using the archive information system, you need an Archive Information Structure that was created based on field catalog SAP_FI_CBR_PT, provided by SAP.

To write data to the Archive, specify the Archiving CBR for PT criteria by filling in the relevant data.

Example

On the selection screen, specify the Archiving CBR for PT criteria and parameters, by filling in the relevant data:

- Under **Central Bank Reporting identification**, specify the **Company Code**, **Fiscal Year**, **Month** and **Run ID**.
- Under Further Selection Criteria specify the Run Date.
- Under ILM Actions, specify the purpose of the archiving by selecting the relevant radio button (Archiving, Snapshot or Data Destruction).
- Under Processing Options, specify the desired processing mode by selecting the relevant radio button (**Test Mode** or **Production Mode**).
- Specify the type of Detail Log by selecting the desired type from the drop-down box.
- Specify the type of Log Output by selecting the desired type from the drop-down box.
- In the Archiving Session Note, enter a description for the archiving session.

Closing and Reporting

VAT Pro-Rata Adjustment

Use

Companies or institutions with 'mixed businesses' (that is, companies that carry out both operations that are subject to VAT and deductible, as well as operations that are tax exempted and/or not deductible) can only deduct VAT at a percentage corresponding to the volume of deductible operations. These companies therefore have to apply the pro-rata VAT method in order to determine tax deduction.

The pro-rata VAT method consists in applying a coefficient to the legal deductible VAT rates for acquisitions. This coefficient is updated periodically and the one to be applied in the current period is the actual rate calculated at the end of the previous period. At the end of the current period, a new pro-rata coefficient is calculated, which may be different to the one applied. In this case, an adjustment correction document has to be posted with the difference between the two coefficients.

Furthermore, for asset acquisitions, it may also be necessary to calculate the difference between the pro-rata coefficient of the acquisition year and the coefficient of the following years. In this case, an adjustment variation document has to be posted for assets with the difference between the coefficients divided by the number of years for which this variation has to be calculated, as defined by local legislation.

The VAT Pro-Rata Adjustment solution enables companies to meet these requirements, by providing functions to:

- Register the VAT pro-rata coefficient

- Apply the VAT pro-rata coefficient when posting an invoice acquisition
- Calculate the difference between the applied coefficient on the posted invoice and the periodic or annual pro-rata execution coefficient, and post an adjustment correction document
- Calculate the difference for asset acquisitions between the DPR (definitive pro-rata percentage) of the acquisition year and that of the current year, and post an adjustment variation document. **Note:** This feature is not relevant for Poland.

i Note

The VAT Pro-Rata Adjustment solution can also be used with the Universal Parallel Accounting (UPA) business solution.

In this case, some additional adjustments may be necessary if you use BADIs [Change Parameters in Adjustment Variation Report](#) (RFID_PTVPR_BADI_010) or [Change Components for Pro-Rata Adjustment Calculation](#) (RFID_PTVPR_BADI_020).

For more details, see SAP Note [3302551](#) .

⚠ Caution

If the UPA business function is activated, you can't use asset under construction (AUC) with line item settlement.

For more information, see [VAT Pro-Rata Adjustments due to PR Calculation](#) and [VAT Pro-Rata Adjustments due to PR Variation](#) (**Note:** This feature is not relevant for Poland).

VAT Pro-Rata Adjustments due to PR Calculation

Use

You use the [Pro-Rata Adjustments due to PR Calculation](#) report (RFID_PTVPRADPRC00) to make adjustment postings for VAT when you apply the pro-rata method to determine tax deduction. In this case, you need to make an adjustment correction posting because the VAT pro-rata percentage applied when an invoice is posted is always provisional so, at the end of the year, when the actual pro-rata percentage is determined, the tax amounts have to be recalculated based on the new coefficient, the base amount, and VAT percentage for each FI document/tax code. This adjustment calculation can also be made periodically, if required, and applied in the system at regular intervals during the year. In this case, the pro-rata coefficient applied on invoice posting is compared with the periodical pro-rata coefficient and the difference is posted in a periodical adjustment.

Prerequisites

Before you run the [Pro-Rata Adjustments due to PR Calculation](#) report (RFID_PTVPRADPRC00), you have to carry out the following IMG activities in Customizing for [Financial Accounting \(New\)](#) by choosing [General Ledger Accounting \(New\)](#) > [Periodic Processing](#) > [Report > Tax on Sales/Purchases: Pro Rata Corrections](#) .

- [Pro-Rata Coefficient](#) 
 - [Define Pro-Rata Calculation Entity](#)
 - [Define Pro-Rata Period Type](#)
 - [Define Pro-Rata Periods](#)
- [Pro-Rata Validation Entity](#) 
 - [Define Pro-Rata Validation Entity](#)
 - [Define Pro-Rata Validation Entity Values](#)
- [Pro-Rata Posting Aggregation Methods](#) 
 - [Define Field Catalog Entries](#)

- [Define Pro-Rata Posting Aggregation Key](#)
- [Pro-Rata Transaction Key](#) [Define Pro-Rata Transaction Key](#)
- [Business Add-Ins \(BADIs\)](#):
 - [BAdI: Pro-Rata Adjustment Document](#)
 - [BAdI: Pro-Rata Adjustment Document Selection](#)
 - [BAdI: Pro-Rata Selection Document](#)
 - [BAdI: Change Components of Pro-Rata Adjustment Calculation Formula](#)

You also have to execute the transaction [Define Pro Rata Coefficients](#) in the SAP Easy Access menu, by choosing [Accounting](#) [Financial Accounting](#) [General Ledger](#) [Reporting](#) [Tax Reports](#) [General](#) [Tax on Sales/Purchases: Pro Rata Corrections](#) [Pro Rata Coefficients](#) [Define Pro Rata Coefficients](#).

Features

The [Pro-Rata Adjustments due to PR Calculation](#) report (RFID_PTVPRADPRC00) reads all acquisitions with the tax codes and other selection criteria that you specify on the selection screen, for the relevant year or period. Using the pro-rata execution coefficient that you specify in the [Define Pro Rata Coefficients](#) transaction (or if you have not executed this transaction, the system uses the entry you make in the [Pro-Rata Percentage](#) field on the [Adjustment Options](#) tab page on the report selection screen), the report then calculates the adjustments that have to be made and posts the relevant amounts (in local currency and using commercial rounding) using the customized posting aggregation key that you select on the [Posting Aggregation Methods](#) tab page.

i Note

If the difference between the tax amounts posted with the applied pro-rata coefficient on invoice posting and the tax amounts calculated with the annual or periodic pro-rata execution coefficient is positive, the adjustment is in favor of the State. If the result is negative, the adjustment is in favor of the company.

Output

You can execute the report as a test run with or without document creation or as an update run, depending on your selection on the [Posting Options](#) tab page. The results are output in a list, as defined by you on the [Output](#) tab page. This list contains the relevant information required for reporting purposes and can be submitted to the authorities, if necessary.

The system also generates a log entry for each process execution and records them in the relevant log report, [Display Pro-Rata DPR Adjustment Documents](#) (RFIDPTDCAD) or [Display Pro-Rata Periodic PPR Calculation Adjustment Documents](#) (RFIDPTPCAD), depending on whether the adjustment was annual or periodic. You can view these log reports, in the SAP Easy Access menu, by choosing [Accounting](#) [Financial Accounting](#) [General Ledger](#) [Reporting](#) [Tax Reports](#) [General](#) [Tax on Sales/Purchases: Pro Rata Corrections](#) [Corrections: Coefficient Calculation](#) [Definitive Pro Rata: Display Correction Documents](#) or [Periodic Pro Rata: Display Correction Documents](#).

i Note

The log reports register the document number of the adjustment posting and prevent double execution. To execute the report again for the same period, you have to reverse the adjustment document. To do this, in the SAP Easy Access menu, choose [Accounting](#) [Financial Accounting](#) [General Ledger](#) [Document](#) [Reverse](#) [Individual Reversal](#).

Activities

To access the report, in the SAP Easy Access menu, choose [Accounting](#) [Financial Accounting](#) [General Ledger](#) [Reporting](#) [Tax Reports](#) [General](#) [Tax on Sales/Purchases: Pro Rata Corrections](#) [Corrections: Coefficient Calculation](#) [Pro Rata Corrections Due to Pro Rata Calculation](#).

VAT Pro-Rata Adjustments due to PR Variation

Use

You use the [Pro-Rata Adjustments due to PR Variation](#) report RFID_PTVPRADPRV00 to make adjustment postings for VAT when you apply the pro-rata method with fixed assets. Since fixed assets remain in the company for several years and the DPR (definitive pro-rata rate) to be applied changes each year, adjustment postings have to be made to cover the variation in DPR from the year of acquisition to each of the subsequent years in the asset's useful life.

Prerequisites

Before you run the report, you have to ensure that tax adjustments resulting from definitive PR calculation have been made for the relevant assets in the years prior to the report execution year. You can do this by executing the [Pro-Rata Adjustments due to PR Calculation](#) report.

You also have to carry out the following IMG activities in Customizing for [Financial Accounting \(New\)](#), by choosing [General Ledger Accounting \(New\)](#) > [Periodic Processing](#) > [Report](#) > [Tax on Sales/Purchases: Pro Rata Corrections](#) >:

- [Pro-Rata Coefficient](#) > [Define Pro-Rata Calculation Entity](#) >
- [Pro-Rata Validation Entity](#) >
 - [Define Pro-Rata Validation Entity](#)
 - [Define Pro-Rata Validation Entity Values](#)
- [Pro-Rata Posting Aggregation Methods](#) >
 - [Define Field Catalog Entries](#)
 - [Define Pro-Rata Posting Aggregation Key](#)
- [Pro-Rata Transaction Key](#) > [Define Pro-Rata Transaction Key](#) >
- [Business Add-Ins \(BADIs\)](#) >:
 - [BAdI: Pro-Rata Adjustment Document](#)
 - [BAdI: Pro-Rata Adjustment Document Selection](#)
 - [BAdI: Pro-Rata Selection Document](#)
 - [BAdI: Change Parameters in Pro-Rata Adjustment due to PR Variation Report](#)

In addition, you have to execute the transaction [Define Pro Rata Coefficients](#) in the SAP Easy Access menu, by choosing [Accounting](#) > [Financial Accounting](#) > [General Ledger](#) > [Reporting](#) > [Tax Reports](#) > [General](#) > [Tax on Sales/Purchases: Pro Rata Corrections](#) > [Pro Rata Coefficients](#) > [Define Pro Rata Coefficients](#) >.

Finally, if you want to run the report for migrated assets for which you do not have the original FI document, you also have to execute the transaction [Display Pro Rata Asset Acquisition Value](#) and insert the required values for each asset. To do this, in the SAP Easy Access menu, choose [Accounting](#) > [Financial Accounting](#) > [General Ledger](#) > [Reporting](#) > [Tax Reports](#) > [General](#) > [Tax on Sales/Purchases: Pro Rata Corrections](#) > [Corrections: Coefficient Variance](#) > [Display Pro Rata Asset Acquisition Value](#) >.

Features

The [Pro-Rata Adjustments due to PR Variation](#) report determines the adjustment amounts due to DPR variation and makes the adjustment postings in the relevant years. When you execute the report, the system first compares the pro-rata coefficient that you specify in the [Define Pro Rata Coefficients](#) transaction for the acquisition year (or if you have not executed this transaction, the system uses the entry you make in the [Pro-Rata Percentage](#) field on the [Adjustment Options](#) tab page on the report selection screen) with the coefficient specified for the execution year. If an adjustment has to be made, the report selects the assets that are to be subject to adjustments due to PR variation, based on your entries on the [Customizing Options](#) tab page.

i Note

The report only considers assets with an individual acquisition value of greater than or equal to the amount specified in the **Individual Acquisition Value** field or with a useful life of greater than or equal to the number of years specified in the **Useful Life (Years)** field. It also only considers postings for an AUC after those postings have been transferred to a completed asset with a "Capitalized on" asset master data year greater than the execution year.

The report then calculates the deductible amount as if the selected asset has been acquired that year by applying the DPR of that year, which you have specified in the transaction **Define Pro Rata Coefficients**. It then subtracts this amount from the deductible amount that was calculated with the DPR of the acquisition year, and divides the result by number of years in the adjustment period for the relevant asset class, as specified in the **Adj Period Pers. Est** and **Adj Period Real Est** fields. The final result is the adjustment amount and this is posted (in local currency and using commercial rounding) according to the posting method that you select on the **Posting Aggregation Methods** tab page. If this result is positive, the adjustment is in favor of the State. If it is negative, the adjustment is in favor of the company.

Output

You can execute the report as a test run with or without document creation or as an update run, depending on your selection on the **Posting Options** tab page. The results are output in a list as defined by you on the **Output** tab page. This list contains the relevant information required for reporting purposes and can be submitted to the authorities, if necessary.

The system also generates a log entry for each process execution and records them in the log report **Display Pro-Rata DPR Adjustment Documents**. You can view this log report, in the SAP Easy Access menu, by choosing ► **Accounting** ► **Financial Accounting** ► **General Ledger** ► **Reporting** ► **Tax Reports** ► **General** ► **Tax on Sales/Purchases: Pro Rata Corrections** ► **Corrections: Coefficient Variance** ► **Definitive Pro Rata: Display Correction Documents** ►.

i Note

The log report registers the document number of the adjustment posting and prevents double execution. To execute the report again for the same period, you have to reverse the adjustment document. To do this, in the SAP Easy Access menu, choose ► **Accounting** ► **Financial Accounting** ► **General Ledger** ► **Document** ► **Reverse** ► **Individual Reversal** ►.

Activities

To access the report, in the SAP Easy Access menu, choose ► **Accounting** ► **Financial Accounting** ► **General Ledger** ► **Reporting** ► **Tax Reports** ► **General** ► **Tax on Sales/Purchases: Pro Rata Corrections** ► **Corrections: Coefficient Calculation** ► **Pro Rata Corrections Due to Pro Rata Variance** ►.

Asset Accounting (FI-AA)

Use

The **Asset Accounting** (FI-AA) component covers the most important laws and business practices specific to Portugal. The following documentation describes these aspects of the component. For generic information about FI-AA, see Asset Accounting (FI-AA) .

Features

Country-Specific Features

Local version Portugal includes a series of reports that enables you to prepare all required asset reporting forms (**mapas fiscais**) for revaluation of fixed assets, in accordance with the edicts issued by the Portuguese tax authorities.

Country Template

The country template for Portugal comes with a chart of depreciation prescribed by law.

Chart of Depreciation

Definition

See .

Use

When you create a company code using the country template for Portugal, the system assigns it chart of depreciation 1PT, which follows Portuguese accounting requirements.

Structure

Chart of Depreciation 1PT

Depreciation area	Use
01	Book depreciation
02	Special tax depreciation for APC in financial statement
03	Special reserves because of special tax depreciation
15	Tax balance sheet
20	Cost-accounting depreciation
30	Consolidated balance sheet in local currency
31	Consolidated balance sheet in group currency
32	Book depreciation in group currency
41	Investment support deducted from asset
51	Investment support posted to liabilities

Reporting Revaluation of Fixed Assets

Use

Since 1963, Portuguese companies have been allowed to revalue their fixed assets, according to the following edicts:

1. Portaria n.º 20 258, 28/12/63
2. Decreto-Lei n.º 126/77, April 2
3. Decreto-Lei n.º 430/78, December 27
4. Decreto-Lei n.º 24/82, January 30
5. Decreto-Lei n.º 219/82, June 2
6. Decreto-Lei n.º 399-G/84, December 28
7. Decreto-Lei n.º 118-B/86, May 27
8. Decreto-Lei n.º 111/88, April 2
9. Decreto-Lei n.º 49/91, January 25

10. Decreto Lei n.º 36/91, July 27

11. Decreto-Lei n.º 22/92, February 14

12. Decreto-Lei n.º 264/92, November 24

13. Decreto-Lei n.º 31/98, February 11

These edicts form the basis of the [asset reporting forms](#) companies need to submit to the Portuguese tax authorities.

Process

Once you have maintained all required Customizing settings, you can run the [Mapas Fiscais \(Portugal\)](#) report for retrieving the relevant information and subsequently printing the asset reporting forms.

Asset Reporting Forms

Use

The asset reporting forms (in Portuguese, [mapas fiscais](#)) should reflect the revaluation of your fixed assets according to the edicts.

Features

The following reporting forms are delivered ('E' denotes [Especial](#)):

Asset Reporting Forms

Form	Description
31.00	Report of tax profit and loss from assets sales/retirements
32.01	Non-revaluated assets (including those acquired "as is") Retired assets Retired assets having a net book value
33.01	Assets revaluated under the provisions of edict 20 258, of Dec. 28, and/or edict 126/77, of April 2, and not revaluated later
33.02	Assets revaluated under the provisions of edict 430/78, of Dec. 27, or edict 24/82, of January 30, and not revaluated later
33.03	Assets revaluated under the provisions of edict 219/82, of June 2, when totally reintegrated at the date referred to in the revaluation (December 31, 1981)
33.04	Assets revaluated under the provisions of edict 219/82, of June 2, when not totally reintegrated at the date referred to in the revaluation (December 31, 1981)
33.05	Assets revaluated under the provisions of edict 399-G/84, of December 28, when totally reintegrated at the date referred to in the revaluation (December 31, 1983)
33.06	Assets revaluated under the provisions of edict 399-G/84, of December 28, when not totally reintegrated at the date referred to in the revaluation (December 31, 1983)
33.07	Assets revaluated under the provisions of edict 118-B/86, of May 27, when totally reintegrated at the date referred to in the revaluation

	(December 31, 1985)
33.08	Assets revaluated under the provisions of edict 118-B/86, of May 27, when not totally reintegrated at the date referred to in the revaluation (December 31, 1985)
33.09	Assets revaluated under the provisions of edict 111/88, of April 2, when totally reintegrated at the date referred to in the revaluation (December 31, 1987)
33.10	Tangible fixed assets revaluated under the provisions of edict 111/88, of April 2, when not totally reintegrated at the date referred to in the revaluation (December 31, 1987)
33.11	Tangible fixed assets revaluated under the provisions of edict 49/91, of January 25, when totally reintegrated at the date referred to in the revaluation
33.11E	Tangible fixed assets revaluated under the provisions of edict 36/91, of July 27 and/or 22/92, of February 14, when totally reintegrated at the date referred to in the revaluation
33.12	Tangible fixed assets revaluated under the provisions of edict 49/91, of January 25, when not totally reintegrated at the date referred to in the revaluation
33.12E	Tangible fixed assets revaluated under the provisions of edict 36/91, of July 27 and/or 22/92, of February 14, when not totally reintegrated at the date referred to in the revaluation
33.14	Tangible fixed assets revaluated under the provisions of edict 264/92, of November 24, when totally reintegrated at the date referred to in the revaluation
33.15	Tangible fixed assets revaluated under the provisions of edict 264/92, of November 24, when not totally reintegrated at the date referred to in the revaluation
34.05	Tangible assets revaluation report referred to in #1 of Article 10 of edict 31/98 of February 11- Assets not totally reintegrated
34.06	Tangible assets revaluation report referred to in #1 of Article 10 of edict 31/98 of February 11- Assets totally reintegrated

The following reporting forms for **declining balances** are available:

Declining Balances Reporting Forms

Form	Description
32.02	Non-revaluated assets Retired assets Retired assets having a net book value
33.13	Tangible fixed assets revaluated under the provisions of edict 49/91, of January 25
33.13E	Tangible fixed assets revaluated under the provisions of edict 36/91, of July 27 and 22/92, of February 14
33.16	Tangible fixed assets revaluated under the provisions of edict 264/92, of November 24

33.17	Tangible fixed assets revaluated under the provisions of edict 31/98, of February 11, totally reintegrated at the date referred to in the revaluation
33.18	Tangible fixed assets revaluated under the provisions of edict 31/98, of February 11, not totally reintegrated at the date referred to in the revaluation
33.19	Tangible fixed asset revaluated under the provisions of edict 31/98, of February 11

i Note

For edicts 15 and above, the edict text must be in a way that the year of the free revaluation comes first. The first four letters are reserved for the free revaluation year.

For example:

Edict	Edict Text
15	2009 Free revaluation

Bank Accounting

Bank Master Data

Definition

See [Bank Master Data](#) .

Structure

In local version Portugal, you assign the bank number to the bank key . To do this:

1. In Customizing for **General Settings**, choose **Set countries** > **Set country-specific checks** .
2. In group box **Key for the bank directory** , set the **Bank Key** to the bank number.

The bank number and, therefore, the bank key have eight digits, without any gaps. The first four digits indicate the bank and the last four indicate the branch.

The bank account number has up to 11 digits, without any gaps.

The two-digit control key checks the combination of the bank number and the bank account number.

The bank number, the bank account number, and the control key together form the NIB code .

i Note

Local version Portugal supplies check rules for the bank master data (see [Checks for Bank Master Data](#)). The **Bank Data** indicator is selected to activate check routines, specific to Portugal, for the bank control key, bank number, and bank account number.

To ensure that the checks run correctly, you must use the ISO country code PT.

Example

This is custom documentation. For more information, please visit [SAP Help Portal](#).

Bank number	Bank account number	Control key	NIB Code
03505777	00006403900	30	035057770000640390030

Bank Directory

Definition

See [Bank Directories](#) .

In Portugal, you can obtain your bank directory on file from the Banco de Portugal. You can upload the information stored in this file to your system and adapt it to your needs.

Governance, Risk, and Compliance

Governance, Risk, and Compliance supports you in reviewing trading partners, complying with regulations on foreign trade, minimizing the risk of fines and financial penalties, and speeding up clearance of goods.

International Trade

International Trade supports you in the classification and compliance in international trade, as well as with managing Intrastat declarations.

Intrastat Declaration

You use Intrastat declarations to record goods movements that cross national borders between member states of the European Union.

You can create Intrastat declarations for Portugal.

Official Document Numbering for Contract Accounting

In Portugal, official document numbering (ODN) in **Contract Accounts Receivable and Payable** is used to ensure documents are numbered without any gaps.

ODN allows you to reuse number range intervals for different parameters such as the company code. To guarantee gapless numbering, the buffering of all number range objects is deactivated for ODN.

To use ODN, make all the settings described in [Customizing for Official Document Numbering](#).

Customizing for Official Document Numbering

To use official document numbering (ODN) in **Contract Accounts Receivable and Payable** for Portugal, you must configure the generic customizing activities for ODN as well as one country/region-specific activity for Portugal, as described below.

Context

For Portugal, it's recommended that you define **Official Document Numbering with Number Groups** if you use the application areas:

- Convergent Contract Accounting (C)
- Extended FI-CA (S)

For more information about official document numbering, digital signature and ATCUD in Convergent Invoicing, see the cookbook attached to SAP Note [3117942](#) .

Procedure

1. Make all generic settings described in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions > Postings and Documents > Document > Official Document Numbers > General Specification for Official Document Numbers > Configuration of Official Document Numbering](#).
2. Assign the following function modules:
 - FKK_EVENT_1190_XX_GEN to event 1190
 - FKK_EVENT_1191_XX_GEN to event 1191
 - FKK_EVENT_1192_XX_GEN to event 1192
3. Define the prefix of the official document number in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions > Postings and Documents > Document > Official Document Numbers > Specifications for Official Document Numbers in Portugal > Define ODN and SAF-T Invoice Number Structure](#).

If you want to have unique official document numbers in your client, specify a different official document number prefix for each entry line (V_FKKPT_NUM_RULE-NUM_PREFIX_ODN).

Master Data in Digitally Signed Invoices

[Series Registration](#)

Business Partner Master Data in Contract Accounting Documents

When the system creates a digital signature for a contract accounting document, changes to the business partner master data are restricted.

According to the legal requirements in Portugal, the following restrictions apply:

- When you create an invoice with a digital signature for a business partner, you can no longer change or delete the Portuguese VAT registration number (tax category [PTO](#)) for the business partner in the business partner master data.
- If the Portuguese VAT registration number of a business partner is invalid, you can't create an invoice with a digital signature. This restriction applies for creating individual invoices as well as for mass processing of invoices.

The system detects a changed registration number. To post documents with that business partner, you need to restore the number in the business partner master data. You can use transaction DISP_REG_TAX to get the original tax data of the business partner that you need to restore.

Prerequisites

You are using **Official Document Numbering with Number Groups** for Portugal. See [Customizing for Official Document Numbering](#).

Example

The following example shows how the system prevents changes to the VAT registration number of a business partner:

1. You create a business partner in the general role with a specific Portuguese VAT identification number for tax category **PTO** under **Tax Numbers** and save the business partner before assigning a **MKK Contract Partner** role to them.
2. For this business partner, you create a contract accounting document, for example, based on an invoice from Convergent Invoicing.
3. The system generates the required digital signature for the document.

After the first document with a digital signature is created, the business partner is registered with that specific PTO tax number. You can use transaction **DISP_REG_TAX** to check the registered tax and registered country/region of a business partner.

4. If you try to change or delete the number in the business partner master data, an error message notifies you that you can't make the changes.

Caution

If a business partner is already registered with a specific tax number, but the tax number is incorrect, you need to archive this business partner number and create a new one with the correct tax number.

Correction Invoices

[Invoice Correction Documents for IS-U](#)

[Manually Posted Correction Documents](#)

Invoice Correction Documents for IS-U

Use

For companies using **Contract Accounts Receivable and Payable** (FI-CA) for the Industry Solution Utilities (IS-U), the following is required by law.

- You are allowed to create invoices and invoice correction documents (debit and credit memos) only.
- Debit and credit memos must have a reference to the original invoice document that it is being corrected.
- Debit and credit memos should use different number ranges, be gapless and sequentially numbered, as well as be ordered chronologically according to the invoice issuing date.

Prerequisites

You are using official document numbering for Portugal. For more information, see [Official Document Numbering](#).

Features

This feature handles invoice correction documents created by adjustment reversals. IS-U invoices created manually are not covered by this solution.

You group the invoice correction documents for IS-U as credit memos or debit memos according to their correction invoice amounts:

- Invoice correction documents with positive or zero amounts (if configured so) are considered debit memos and get ND as Internal Code of the SAF-T InvoiceNo corresponding to this invoice correction document.
- Invoice correction documents with negative or zero amounts (if configured so) are considered credit memos and get NC as Internal Code of the SAF-T InvoiceNo corresponding to this invoice correction document.
- Regular invoices get FT as Internal Code of the SAF-T InvoiceNo.

You can use the event R431 to determine that invoices in IS-U with billing documents which have a reference to another billing document are considered as invoice correction documents.

The system uses the information about the invoice correction documents to be able to use different number ranges for invoices, credit memos or debit memos during the official document number generation. For more information, see SAP Note 1903368.

Activities

1. You check and assign the following function modules in the transaction FQEVENTS:

- Check event 1190: FKK_EVENT_1190_PT_2
- Check event 1191: FKK_EVENT_1191_PT_2
- Check event 1192: FKK_EVENT_1192_PT_2
- Assign event R431: ISU_EVENT_R431_PT
- Assign event R436: ISU_EVENT_R436_PT

2. You maintain number range intervals for a number range object. For more information, see SAP Note 1903367.

3. You define ODN and SAF-T Invoice Number Structure in Customizing for Contract Accounts Receivable and Payable ► [Basic Functions](#) ► [Posting and Documents](#) ► [Document](#) ► [Official Document Numbers](#) ► [Specifications for Official Document Numbers in Portugal](#) ► [Define ODN and SAF-T Invoice Number Structure](#) ►

In this activity you maintain the Internal Code and Series ID for a number range object and number range numbers for either invoice, credit memo or debit memo as showed in the example below:

❖ Example

Object	SubObject	NR	Year	El. ODN DG	CoCd	Year	Int.Code	Series	ODN Pref
FKK_ED12SY	PT01	21	2013	Eligible for ODN and Digital Signature	PT01	2013	FT	01	

Object	SubObject	NR	Year	El. ODN DG	CoCd	Year	Int.Code	Series	ODN Pref
FKK_ED12SY	PT01	22	2013	Eligible for ODN and Digital Signature	PT01	2013	ND	01	
FKK_ED12SY	PT01	23	2013	Eligible for ODN and Digital Signature	PT01	2013	NC	01	

Systems customized in this way generates the SAF-T Invoice Number as follows: FT 01/000000000023 for normal invoice, ND 01/000002000005 for debit memo, NC 01/000000300002 for credit memo.

4. Add the field CORRDOCN0 in the structure ERDZ (Table: Print Document Single Lines) to be able to print the original invoice document number in the correction invoice processed in the function module ISU_EVENT_R436_PT.

For more information, see SAP Note 1903367 and 1903368.

Manually Posted Correction Documents

Use

If you post correction documents manually using transaction FPE1, you must make sure the following requirements are adhered to:

- Separate number ranges

To differentiate between invoices and correction documents (debit memos and credit memos), separate number range numbers must be used. Each document type must be numbered without gaps with an official document number.

- Reference to original document

Debit memos and credit memos must contain a reference to the corrected document.

- SAF-T reporting

The correction document and the reference to the original invoice must be reported in SAF-T. The SAF-T file contains the following fields for correction documents:

- "InvoiceType" (SAF-T official field number 4.1.4.7) – type of the current invoice
- "Reference" (SAF-T official field number 4.1.4.18.9.1) – reference to the original document

Features

Manually Posting a Correction Document

When you post a correction document using transaction FPE1, you must enter the reference to the original document in the **Correction for Document** field. If you fill this field, the document that you create is identified as a credit memo or debit memo and the following applies:

- You cannot post a correction for this correction document. If you try to enter a reference to a correction document in the **Correction for Document** field, the system issues an error message.
- You cannot set a reference to a nonexistent document.

If posting is successful, the system stores the relationship between the original document and the correction document.

Determining the Document Number Range

To determine the relevant number range for a manually posted correction document, the system first determines the document type as follows:

Correction for Document Field	Document Amount	Determined Document Type for SAF-T
Not filled	Any	Invoice (FT)
Filled	Positive	Debit memo (ND)
Filled	Negative	Credit memo (NC)

Based on the document type, the system then determines the relevant document number structure by checking the **Invoice type** field in Customizing for **Contract Accounts Receivable and Payable** under **Basic Functions > Postings and Documents > Document > Official Document Numbers > Specifications for Official Document Numbers in Portugal > Define ODN and SAF-T Invoice Number Structure**.

To have separate numbering for invoices, credit memos, and debit memos, you must therefore enter separate number range numbers for each document type in this Customizing activity, for example, as follows:

Number Range Object	Subobject	Number Range Number	Invoice Type
FKK_ABC100	Company code	21	FT Invoice
FKK_ABC100	Company code	22	ND Debit note
FKK_ABC100	Company code	23	NC Credit note

Determining the Document Reference for SAF-T

When you generate the SAF-T file, if the document type is NC or ND, the system checks which application created the credit memo or debit memo. If the application is FI-CA only, the system reads the reference in the correct document to determine the original invoice. This reference is then used to retrieve the official document number (ODN) of the original invoice. If this is successful, the ODN is used as the reference number in SAF-T. If this is not successful, the original invoice number is used as the reference number.

VAT Declaration (Portugal)

Use

In Portugal, all businesses that are liable to pay value-added tax (VAT) must submit a VAT declaration (**Declaração de IVA**) to the authorities on both a monthly and annual basis.

You use the report **Advance Return for Tax on Sales/Purchases: Portugal** (RFUVPT00) to generate the data relevant for either the monthly or annual VAT declaration and to transfer this information to the VAT declaration forms provided by the Portuguese authorities.

Note the following:

- As of October 2013, according to the legal regulation Portaria nº 255/2013, you must submit two annexes for fields 40 and 41 with the monthly VAT declaration. The annexes report all VAT amounts resulting from VAT corrections per VAT ID. The VAT corrections are documents identified by special tax codes. You must Customize these special tax codes so that corrections are assigned to the external tax groups used in annexes 40 and 41. Fields 40 and 41 show the total amounts per VAT ID from the annexes.
- In **Contract Accounts Receivable and Payable** (FI-CA) the VAT amounts per VAT ID that result from VAT corrections must be derived from credit memos and debit memos created in FI-CA and IS-U Invoicing.

Prerequisites

- You have activated the recording of tax data using the generic tax reporting tool. For more information, see [Generic Tax Reporting](#).

To store the VAT ID in the tax recording table DFKKREP06 of the generic tax reporting tool, the function module FKK_PT_EVENT_0930 is used. You must assign this function module to event 0930 in transaction FQEVENTS, ideally at the same time as the activation of the generic tax reporting tool.

For information about the VAT ID assignment rules regarding the tax number category, see SAP Note [1884768](#). To populate the VAT ID in the tax recording table DFKKREP06 retroactively starting with the activation of the generic tax reporting tool, a migration report is provided. For more information, see the manual steps in SAP Note [2005966](#).

- You have made the following settings for annexes 40 and 41:
 - For FI-CA or IS-U documents that are created manually and are relevant for annexes 40 and 41, you have defined special tax codes for corrections so that these documents can be identified as VAT corrections.
 - For IS-U correction documents that are created automatically and are relevant for annexes 40 and 41, the system must change the tax codes of the documents that are generated automatically into special tax codes for corrections. For this purpose, you have assigned the function module ISU_EVENT_R413_PT to event R413.

IS-U documents are identified as correction documents relevant for annexes 40 and 41 if the corresponding billing documents have a reference to a previous billing document or they are credit memos (billing transaction [Credit memo / Backbilling](#) and calculation reason [Credit memo](#) or documents with a negative amount).

Activities

To access the report on the [SAP Easy Access](#) screen, choose ► [Accounting](#) ► [Financial Accounting](#) ► [General Ledger](#) ► [Reporting](#) ► [Tax Reports](#) ► [Portugal](#) ► [Advance Return for Tax on Sales/Purchases](#) ►. For more information, see [VAT Declaration](#).

If a business partner is blocked in the system and you do not have the required authorization to display blocked business partners (role SAP_CA_BP_DP_ADMIN), the business partner data and the relevant VAT registration numbers are not displayed in the report output.

For more information, see [Displaying Personal Data](#).

Parent topic: [Contract Accounting](#)

Related Information

[Contract Accounting Data in Statutory Reports](#)

[Processing Payments](#)

[Master Data in Digitally Signed Invoices](#)

[Correction Invoices](#)

[Standard Audit Files for Tax Purposes \(SAF-T\) \(Portugal\)](#)

[Series Registration](#)

Standard Audit Files for Tax Purposes (SAF-T) (Portugal)

Use

In Portugal, you are required to create a standard data export file called Standard Audit File for Tax Purposes (SAF-T) to store all tax-relevant data in XML format. You must submit this file on a monthly basis to the tax authorities.

Features

You can use the following report to generate the SAF-T XML file for data from systems with Contract Accounts Receivable and Payable (FI-CA):

- [Standard Audit File for Tax Purposes \(SAFT\) \(RPFIEU_SAFT\)](#)

You use this report to extract the data and generate the file.

If you use an integrated solution, that is, FI/SD and FI-CA run in the same system, you generate a consolidated XML file that contains data from both applications. For standalone FI-CA solutions, you generate an XML file only for data from systems with FI-CA.

Caution

Note for Industry Solutions using Contract Accounts Receivables and Payables (FI-CA)

You can generate SAF-T files only if you are using SAP Utilities or the Industry Component Contract Accounts Receivable and Payable. The SAF-T report can include documents created by the following:

- Invoicing in SAP Utilities, including deregulation scenarios
- Contract Accounts Receivable and Payable (FI-CA)
- SAP Convergent Invoicing

More Information

[SAFT-PT: XML File Creation Using RPFIEU_SAFT](#)

Parent topic: [Contract Accounting](#)

Related Information

[Contract Accounting Data in Statutory Reports](#)

[Official Document Numbering for Contract Accounting](#)

[Master Data in Digitally Signed Invoices](#)

[Correction Invoices](#)

[VAT Declaration \(Portugal\)](#)

[Series Registration](#)

SAFT-PT: XML File Creation Using RPFIEU_SAFT

Use

You can use the report [Standard Audit File for Tax Purposes \(SAFT\) \(RPFIEU_SAFT\)](#) to generate the SAF-T XML file for data from systems with Contract Accounts Receivable and Payable (FI-CA).

Prerequisites

- You have made the following settings in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions](#) > [Postings and Documents](#) > [Document](#) > [Official Document Numbers](#) > [Specifications for Official Document Numbers in Portugal](#) > [Define ODN and SAF-T Invoice Number Structure](#) :
 - You have defined the prefix for the official document numbers, and the internal code and series ID of the SAF-T invoice numbers.
 - To differentiate between invoices and correction documents in the SAF-T file, you have assigned different number range intervals to each invoice type.

For information about manually posted correction documents, see [Manually Posted Correction Documents](#).

- You have defined rules for selecting FI-CA objects that are to be reported in the XML files in table 4.1 “Sales Invoices”. You can define rules for the separate SAF-T file types billing, self-billing, and third-party billing. You do this in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions](#) [Standard Government Tax Audit Files](#) [Standard Audit Files for Tax Purposes \(SAF-T\)](#) [Standard Audit File for Tax Purposes \(SAF-T\) - Portugal](#) [Define Rules for Extracting Invoices for SAF-T Files](#).

i Note

To make sure that invoices are reported in only one type of file (that is, billing, self-billing, or third-party billing), you can check the extraction rules using the report [SAF-T FI-CA Customizing Consistency Check](#) (RFICA_SAF_T_CONSISTENCY_CHECK). You call the report using transaction SA38. For more information, see the report documentation in the system.

- You have run the report [SAF-T Portugal: Maintain Business Partners Requesting Receipts](#) (RFKKPTSAFT_BPRCT_MAINTAIN) in transaction SA38. You use this report to define business partners who require a receipt to confirm that payment has been made for a customer invoice. When a receipt is requested, the payment information must be reported in table 4.4 “Payment” of the SAF-T file.

Note that the payments must be the clearing documents of the invoices that are extracted according to the rules in the Customizing activity [Define Rules for Extracting Invoices for SAF-T Files](#).

- You have defined whether payment data for particular company codes is to be excluded from the optional payment fields of node 4.1.4.19.6 in table 4.1 “Sales Invoices” of the SAF-T file. You make this setting in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions](#) [Standard Government Tax Audit Files](#) [Standard Audit Files for Tax Purposes \(SAF-T\)](#) [Standard Audit File for Tax Purposes \(SAF-T\) - Portugal](#) [Define General Settings for SAF-T at Company Code Level](#).
- If required, you can adapt or replace the standard processing logic for extracting data and creating the SAF-T XML files in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions](#) [Standard Government Tax Audit Files](#) [Standard Audit Files for Tax Purposes \(SAF-T\)](#) [Standard Audit File for Tax Purposes \(SAF-T\) - Portugal](#) [Define Custom Logic for SAF-T Extraction and File Creation](#).
- You have made the necessary settings for requesting ATCUD for a self-billing vendor. For more information, see [Configuring ATCUD for Self-Billing Vendors](#).
- You have made the necessary settings for reporting ATCUD in SAF-T. For more information, see [Configuring ATCUD for Reporting in SAF-T](#).
- You have made the necessary settings for creating FI-CA payment receipts with ATCUD codes. For more information, see [Customizing FI-CA Payment Receipts for ATCUD](#).

Note that you must also make settings on the initial screen of the report. For more information, see [Activities](#).

Activities

You access the report on the [SAP Easy Access](#) screen by choosing [Accounting](#) [Financial Accounting](#) [General Ledger](#) [Reporting](#) [Standard Audit File for Tax Purpose \(SAFT\)](#) [Generate SAFT](#) (transaction FIEU_SAFT).

To generate the SAFT-PT file, select the radio buttons on the selection screen in sequence and make the required settings. The following settings are specific to FI-CA:

• Define Settings

Specify a business case for Portugal as follows:

- Choose [Country-Specific Settings](#) [Portugal](#) [Specify Business Cases](#).
- Specify a business case with the following values:
 - In the [Master Data](#) screen area, enter [Posting Date](#) in the [Document/Posting Date](#) field.
 - In the [Transaction Data](#) screen area under [Include FI-CA Data](#), select the [FI-CA Data](#) checkbox and define whether you want to generate the SAF-T file for an integrated system (FI-CA and FI) or for an FI standalone system.
 - Make the other settings for the business case according to your requirements.

If you create SAF-T files for self-billing invoices or third-party invoices, specify the storage location for the files under ► **Country-Specific Settings** ► **Portugal** ► **Self-Billing** ► **Destination for Storing XML Files for SAF-T Reporting** ►.

- **Extract Data**

In the **Operation Selection** screen area, specify the type of SAF-T file that you want to generate in the **Extract Module** field. You have the following options:

- **FI-CA**

The system creates the generic SAF-T file.

- **Self-Billing (FI-CA)**

The system creates one XML file per business partner (that is, per self-billing vendor).

- **Third-Party Billing (FI-CA)**

The system creates one XML file per vendor. One vendor can represent more than one business partner.

Note that you must also choose whether to extract new data or delete data that has already been extracted.

- **Create File**

Enter the tax accounting basis that corresponds to the module specified in the **Extract Module** field, that is, **Billing** (for module FI-CA), **Self-Billing**, or **Third-Party Billing**.

Make all other settings according to your requirements. For more information, see the report documentation in the system.

Data Protection

If the data selected for a SAF-T file includes blocked business partner data, you can create the file only if you have the required authorization (role SAP_CA_BP_DP_ADMIN). If you are authorized, the file is created, but a warning message is issued. If you are not authorized, file creation is canceled and an error message is issued.

For **third-party billing**, this applies only to files created in the following cases:

- The vendor for which you are creating the file is blocked.
- The vendor for which you are creating the file is not blocked, but one or more business partners related to the vendor are blocked. File creation continues as normal for vendors with no blocked data.

For **self-billing**, this applies only to files created for blocked business partners. File creation continues as normal for business partners with no blocked data.

If you are not authorized, you can use transaction BUP_REQ_UNBLK to request unblocking.

More Information

For general information that is not specific to FI-CA, see the following:

- Report documentation in the system
- See [SAF-T](#) in the Product Assistance

Configuring ATCUD for Self-Billing Vendors

The following steps guide you in setting up your system to request an ATCUD validation code for a self-billing vendor and to create one XML file per vendor.

Context

You can assign a separate contract account to an existing business partner to set him up as a self-billing vendor.

For example:

- Business partner A with contract account number 1000 is a regular customer.
- Business partner A with contract account number 2000 is a self-billing vendor.

Procedure

Run the **FI-CA Portugal Digital Signature NRRR Massive Maintenance** report (RFKK_PT_MASS_NRRR) to generate the required entries in the customizing views.

The report automatically creates entries in:

- **Define Number Groups for Official Document Numbering** (view V_TFK_ODNGRP)

You can access this customizing activity by going to **Contract Accounts Receivable and Payable** > **Basic Functions** > **Postings and Documents** > **Document** > **Official Document Numbers** > **General Specification for Official Document Numbers** > **Official Document Numbering with Number Groups** > **Define Number Groups for Official Document Numbering**.

- **Define ODN and SAF-T Invoice Number Structure** (view V_FKKPT_NUM_RULE)

You can access this customizing activity by going to **Contract Accounts Receivable and Payable** > **Basic Functions** > **Postings and Documents** > **Document** > **Official Document Numbers** > **Specifications for Official Document Numbers in Portugal** > **Define ODN and SAF-T Invoice Number Structure**.

- **Rules for Self-Billing: Additional Parameters** (view VFKKSAFTINV_SBA)

You can access this customizing activity by going to **Contract Accounts Receivable and Payable** > **Basic Functions** > **Standard Government Tax Audit Files** > **Standard Audit File for Tax Purposes (SAF-T)** > **Standard Audit Files for Tax Purposes (SAF-T) – Portugal** > **Define Rules for Extracting Invoices for SAF-T Files** > **Rules for Self-Billing: Additional Parameters**.

- Number Ranges Object FKK_ED06SY

For more information, see the report documentation.

Configuring ATCUD for Reporting in SAF-T

The following steps guide you in setting up your system to report the ATCUD validation code to Portugal's tax authorities.

Context

You as a key user can make these configuration settings to report the ATCUD in the SAF-T.

Procedure

- Request an ATCUD validation code.

For more information about the validation code, see **Customizing Digital Signatures for FI-CA Documents with ATCUD**.

- Store the validation code for your number range series in **Manage Series Validation Code – Portugal**.
- Make required settings in Customizing for **Contract Accounts Receivable and Payable** under **Basic Functions** > **Standard Government Tax Audit Files** > **Standard Audit File for Tax Purposes (SAF-T) - Portugal**.
- If necessary, add new **SAF-T Extension ID** with process type INUM (Extract Numeric Part from Invoice Number) in Customizing under (view VFKKSAFTINV_EXTN).
- Provide the custom function module created by copying SAP's function module FKK_SAFT_PROC_EXTRACT_INUM as reference.
- Ensure the created **SAF-T Extension ID** successfully links to the view VFKKSAFTINV_RULE.

Results

ATCUD is available after the SAF-T Generation in the **SAF-T Source Document: Header** table (DFKKSAFTINV_H) for invoices and in the **SAF-T Working Document: Header** table (DFKKSAFTWD_H) for the working document

Related Information

[Customizing Digital Signatures for FI-CA Documents with ATCUD](#)

[SAP Note 3117942](#) 

[SAP Note 3261766](#) 

Customizing FI-CA Payment Receipts for ATCUD

Find out which settings are required to create FI-CA payment receipts with ATCUD codes that comply with the legal requirements in Portugal.

Prerequisites

You must maintain business partners, including VoC (VAT on Cash) business partners, that request receipts in the report **SAF-T Portugal: Maintain Business Partners Requesting Receipts** (RFKKPTSAPT_BPRCT_MAINTAIN). Receipts requested by business partners require ATCUD information and must be printed out.

For more information, see the report documentation.

Context

According to the legal requirements, you must request a validation code for the relevant number range series of FI-CA payment receipts from the tax authorities. You must also print and report the ATCUD in the SAF-T report. You require an ATCUD code only for payment receipts printed for customers and VoC payment receipts.

i Note

The ATCUD comprises a validation code and the document number (without the prefix), separated by a minus sign, for example, 87654321-210000000001.

Procedure

1. Define document number ranges for the number range object FKK_BELEG in Customizing for **Contract Accounts Receivable and Payable** under **Basic Functions** > **Postings and Documents** > **Basic Settings** > **Maintain Document Number Ranges**  (transaction SNRO).

i Note

Separate number ranges are required for RG (**Other Payment Receipts**) and RC (**Payment Receipts in VAT on Cash Scheme**) payment receipts.

Caution

You must use dedicated number ranges to create FI-CA payment receipts that contain the ATCUD code. Using existing number ranges that have already been used to create payment receipts without the ATCUD code causes errors because of data inconsistencies.

2. Define the document types that you want to use for creating payment receipts in Customizing for **Financial Accounting** under **Financial Accounting Global Settings (New)** > **Document** > **Document Types** > **Define Document Types** .

Caution

Make sure to maintain the correct number ranges (as defined in step 1) in [Properties](#).

3. Assign document types to the number ranges that you defined for FI-CA payment receipts in step 1 in Customizing for [Contract Accounts Receivable and Payable](#) under [Basic Functions](#) > [Postings and Documents](#) > [Document](#) > [Maintain Document Assignments](#) > [Document Types](#) > [Maintain Document Types and Assign Number Ranges](#).
4. Assign a SAF-T document type to each number range in Customizing for [Contract Accounts Receivable and Payable](#) under [Business Transactions](#) > [Payments](#) > [Processing Incoming and Outgoing Payments](#) > [Receipt Management](#) > [Country/Region-Specific Settings](#) > [Portugal](#) > [Assign SAF-T Document Types to Number Ranges \(FI-CA Payment Receipts\)](#).

Enter your number ranges and assign a series ID and an invoice type to each of them. Make sure that you use each number range for only one company code.

i Note

To create FI-CA payment receipts with the ATCUD code, you must assign a series ID that starts with Q ([Payment Receipts FI-CA](#)) and adheres to specific naming conventions. The series must be unique within the company code.

Only number ranges that fulfill these requirements can be sent to the authorities to request the validation code for the ATCUD.

For more information about the naming conventions, see the documentation of the Customizing activity.

5. Maintain the validation code for the number range series in the [Manage Series Validation Code for Portugal](#) report (GLO_PT_SVC transaction).

The report retrieves and displays all series IDs that adhere to the naming conventions. You can then filter for business process Q ([Payment Receipts FI-CA](#)) to see the relevant series IDs with the corresponding series document type (for example, RG or RC). For new entries with the status **Initial**, enter the validation code that you received from the authorities. When you save, the status changes to **Active**.

i Note

You must request the validation code for fiscally relevant documents like payment receipts.

⚠ Caution

Once you have created your first FI-CA payment receipt with ATCUD, make sure that you don't change any settings for the corresponding number ranges in the Customizing activity [Assign SAF-T Document Types to Number Ranges \(FI-CA Payment Receipts\)](#). Changing the settings can cause data inconsistencies.

Results

When you generate the SAF-T report, the system retrieves the validation code from the report.

Series Registration

This feature enables you to register the series identifier to create a Unique Document Number or ATCUD for Delivery documents, Settlement documents, and SD Billing documents.

According to Portaria 195/2020, it's mandatory for all the companies to communicate the series identifier used in document numbering of invoices, deliveries, etc., to the tax authorities. The tax authorities will return a validation code for each communicated series identifier. This communication is done manually on the tax portal. Use the validation code to create a Unique Document Number or ATCUD. ATCUD is created by combining the validation code and the sequential document number. It is mandatory to print the ATCUD on documents, to report e-Invoices and SAF-T (PT) files and to include in the QR-Code.

Parent topic: [Contract Accounting](#)

Related Information

[Contract Accounting Data in Statutory Reports](#)

[Processing Payments](#)

Managing Series Validation Code for Portugal

You can register the number range series to the tax authorities using the [Manage Series Validation Code](#) app.

Prerequisites

In your configuration environment, use the search function to open the following activities:

- [Record Number Ranges for Digital Signature of Outbound Delivery](#)
- [Record Number Ranges for Digital Signature Solution for Settlement Management](#)

Context

Use the [Manage Series Validation Code](#) app to associate the series identifier with a validation code and to manage Registration, Cancellation, Finalizing of the series identifier.

The [Manage Series Validation Code](#) app saves the configurations and data associated with the series identifiers from all the relevant categories and structures the information as required for the registration process. Using this information, you can register the series identifier in the tax portal and, then update the validation code (received from the tax portal) along with its associated information in the [Manage Series Validation Code](#) app.

Procedure

1. On your Fiori launchpad, go to [Manage Series Validation Code](#) app for Portugal.

In the [Manage Series Validation Code](#) home page, you'll see the following filters:

- [VAT number](#)
- [Series Document Type](#)
- [Business Process](#)
- [Series Status](#)

2. Select relevant filters and choose [Go](#).

List with the following columns is displayed:

- [Series Identifier](#): Indicates the series identifier corresponding to a number range interval.
- [VAT Registration Number](#): VAT registration number (VAT reg.no.) of the Business Entity.
- [SAFT Document Type](#): Indicates the type of the documents corresponding to the series identifier.
- [Document Class](#): Indicates the classification of the according to the SAFT Document Type
- [Series Business Process](#): Indicates the SAP Business process to which the series identifier belongs to.
- [Series Start Number](#): The first internal sequential document number of the numbering interval corresponding to the series identifier.
- [Series Start Date](#): The date on which the validation code is activated for the series identifier.

- **Series Status:** Indicates the status code that the series identifier has during the communication process, which can have the following statuses:
 - **Initial:** This status represents that you have configured the series identifier in the views but has not been communicated in the back end.
 - **Active:** This status represents that you have already registered the series identifier and validation code is assigned.
 - **Finished:** This status represents the final status. This indicates that a series was valid for a set of documents, but that it will no longer be used from the last document communicated.
 - **Cancelled:** This status represents the final status. This cancels the communication of a series previously communicated by mistake.
- **Communication Method:** Indicates the communication method for performing the series registration, which is either manual or Web service update.
- **Series Validation Code:** The series validation code assigned by tax authority on registering a series identifier.
- **Certification ID:** Certificate of the billing software as granted by the tax authority.

i Note

If you are using the manual registration process, prior to the activity in the app, series identifier must be registered in the tax authority portal.

3. To register the series identifier, choose the entry for which you want to update the validation code manually.

You navigate to a page with details corresponding to the series identifier.

4. Choose **Edit**.
5. Enter the validation code received in the tax portal in the **Validation Code** field.

i Note

Validation codes must be at least eight characters long as per legal specification.

6. Enter the timestamp of series registration in the **Series Status Change Timestamp** field.
7. Choose **Save**.

Series identifier status is set to **Active** from **Initial** status.

i Note

You can edit, update, or enter the validation code manually only when the status of the series identifier is marked as **Active**, and when you have not posted any documents using the series identifier.

8. To mark the status of series identifier as **Finished**, perform the following actions for a series that is in **Active** status:
 - a. Select the series identifier, which you want to mark as **Finished**.
 - b. Choose **Finish**.
9. To mark the status of series identifier as **Cancelled**, perform the following actions for a series that is in **Active** status:
 - a. Select the series identifier that you want to cancel.
 - b. Choose **Cancel**.

i Note

After **Cancel** series action, there are no further actions possible on the series. **Cancel** action must be performed only if there are no documents posted and series was previously registered by mistake.

Convergent Invoicing

Use the Convergent Invoicing functions provided to meet business and legal requirements in Portugal.

[Business Partner Master Data in Digitally Signed Invoices](#)

When the system creates a contract accounting document based on an invoice from **Convergent Invoicing**, and it generates the required digital signature, changes to the business partner master data are restricted. For more information, see **Business Partner Master Data in Contract Accounting Documents** under **Related Information**.

[Integration with Sales Billing](#)

You can transfer SD billing documents from Sales and Distribution to Contract Accounts Receivable and Payable through Convergent Invoicing. For Portugal, the activation of this scenario affects digital signature generation, ATCUD, and official document numbering (ODN).

[Configuration for Tax Determination](#)

Set up your system to determine the tax amount for invoices in Convergent Invoicing for Portugal.

[Business Partner Master Data in Contract Accounting Documents](#)

Integration with Sales Billing

You can transfer SD billing documents from Sales and Distribution to Contract Accounts Receivable and Payable through Convergent Invoicing. For Portugal, the activation of this scenario affects digital signature generation, ATCUD, and official document numbering (ODN).

One of the required settings is to activate the **FI-CA-INV Active** flag for the relevant customer account groups and billing types in the Customizing activity **Define Settings for Transfer to Invoicing**. If you activate this flag, the system posts SD billing documents that have the specified combination of customer account group and billing type to Contract Accounts Receivable and Payable through Convergent Invoicing.

The following then applies:

- If the FI - CA - INV flag is active, the system doesn't generate a **digital signature** for an SD billing document that has the specified combination of customer account group and billing type. Instead, it generates the digital signature only for the corresponding contract accounting document. The contract accounting document is created when the invoice is created in Convergent Invoicing based on the SD billing document as the source document.
- You require an **ATCUD code** only for invoices, debit memos, and credit memos that are posted to Contract Accounts Receivable and Payable through Convergent Invoicing.

- You require a separate set of **official document numbers (ODN)** for invoices, debit memos, and credit memos that have the convergent invoicing header.

For more information about configuring this integration scenario, see the related links.

Defining Tax Codes for Correction Invoices in Convergent Invoicing

Define tax codes for correction invoices, such as credit and debit memos, that you post in Convergent Invoicing.

Prerequisites

- You have configured the FICA_TAX_EVENT_2612 function module in event 2612. For more information, see [Configuring the Function Module for Tax Determination](#).
- You have activated the relevant Business Configuration (BC) sets. For more information, see [Activating the Business Configuration \(BC\) Sets for Tax Determination](#).

Context

By default, correction invoices in Convergent Invoicing, such as credit or debit memos, use the same tax code as the original invoices. However, in Portugal, correction invoices must have different tax codes from the original invoices.

To set up tax determination for correction invoices in Convergent Invoicing, use the [Define Tax Codes for Correction Invoices](#) Customizing activity.

Caution

Configure this Customizing activity before you post correction invoices. The changes cannot be applied retroactively.

Procedure

1. In Customizing for **Financial Accounting**, choose **Contract Accounts Receivable and Payable** > **Convergent Invoicing** > **Country/Region-Specific Functions** > **Portugal** > **Define Tax Codes for Correction Invoices**. Alternatively, you can use transaction FQ2665.
2. Select **Create**.
3. Specify the following values:
 - Tax country/region
 - Tax code of the original invoice
 - Category of invoice correction
 - Reason for the billing request
4. Confirm your entries.
5. In the **Target Tax Code** field, specify the tax code for correction invoices.

Example

Your configuration may look like this:

Tax Country/Region	Source Tax Code	Invoice Correction Category	Billing Request Reason	Target Tax Code
PT	3Q	C0	PT10	EJ
PT	3Q	D0	*	FT

The system determines tax codes for correction invoices based on the combination of the source tax code, the category of invoice correction, and the reason for the billing request.

6. Save your entries.

Results

When you post a correction invoice, the system checks the values that you've maintained in this Customizing activity: the country/region data, the source tax code, the invoice correction category, and the reason for a billing request. Based on the combination of these values, the system applies the relevant target tax code to your correction invoice.

Task overview: [Configuration for Tax Determination](#)

Related Information

[SAP Note 3578349](#) 

Configuring the Function Module for Tax Determination

Configure the function module for tax determination for correction invoices, such as credit and debit memos, in Convergent Invoicing.

Context

Configure the following function module to be able to apply correct tax codes to correction invoices in Convergent Invoicing:

Function Module	Event
FICA_TAX_EVENT_2612	2612

Procedure

- 1. Go to the FQEVENT transaction.
- 2. Specify the event for which you want to enter the function module and choose **Execute**.
- 3. Go to the **Function Modules** tab.
- 4. In **Installation-Specific Function Modules and BAdI Definitions**, choose the edit icon and enter the name of the function module.
- 5. Save your entries.

Activating the Business Configuration (BC) Sets for Tax Determination

These BC sets are customized for Portugal and relevant for tax determination applied to correction invoices, such as credit and debit memos, in Convergent Invoicing.

Context

The BC Sets that you must activate are as follows:

BC Set	SAP Note Delivering This BC Set
FICA_TFK033F_S	3578349 
FICA_TFK033C_S	
FICA_TFK033C1_S	
FICA_TFK033C2_S	

Procedure

- 1. Call up the **Business Configuration Sets: Activation** (SCPR20) transaction.
- 2. Enter one of the required BC Sets and choose **Activate BC Set**.
- 3. On the **Activation Options** window, in the **Select Activation Mode** section, select **Expert Mode**. Then choose **Continue Activation**.
- 4. Repeat steps same steps for the other BC Sets.

Flexible Real Estate Management (RE-FX)

The **Flexible Real Estate Management** (RE-FX) component covers the most important laws and business practices specific to Portugal. The following documentation describes these aspects of the component.

For generic information about RE-FX, see [Flexible Real Estate Management \(RE-FX\)](#).

Materials Management (MM)

Use

The **Materials Management** (MM) component covers the most important laws and business practices specific to Portugal. The following documentation describes these aspects of the component. For generic information about MM, see [Materials Management \(MM\)](#).

Features

The functions for Portugal allow you to automatically number ERS invoices as required by law. For more information, see [ERS Invoice Numbering](#).

ERS Invoice Numbering

Use

In many European countries, the law requires companies to number ERS invoices consecutively for each supplier.

In SAP S/4HANA, when you issue ERS invoices using [Evaluated Receipt Settlement](#), the system numbers them accordingly.

Activities

Customizing

Make the settings as described in Customizing for [Materials Management \(MM\)](#) under [Logistics Invoice Verification](#) [Evaluated Receipt Settlement \(ERS\)](#) [ERS Invoice Numbering](#).

Master Data

In each business partner record, enter the number group that you created in the [Tax Number 4](#) field, on the [Control](#) screen.

Day-to-Day Activities

When you create an ERS invoice, the system generates an ERS invoice number and stores it in the [Reference Document Number](#) field in the invoice header.

Note that the ERS invoice number does not replace the accounting document number. It is generated in addition to it.

For more information, see, for example, SAP Note *ERS: Vendor-specific sequence number*: [684514](#).

Sales and Distribution (SD)

Online Communication with Tax Authority via Web Service

Use

In Portugal, as per the law, companies dealing with domestic transport of goods must submit the transport details to the tax authorities using an online mode of communication (in this case, a web service).

Prerequisites

Ensure that your system is configured such that all entities responsible for local transport of goods can communicate with the Portuguese tax authority (Autoridade Tributária, AT) via web service. For more information, refer SAP Notes [1901250](#) and [1901252](#).

Also ensure that you have performed the following Customizing settings:

- Assigned sales document type to goods movement type. You do this in Customizing for [Sales and Distribution](#), under [Logistics Execution](#) [Shipping](#) [Deliveries](#) [Country-Specific Functions](#) [Portugal](#) [Assign Sales Document Type to Goods Movement Type](#).
- Recorded number ranges for digital signature of outbound delivery documents. You do this in Customizing for [Cross-Application Components](#), under [General Application Functions](#) [Digital Signature](#) [Country-Specific Settings](#) [Portugal](#) [Record Number](#).

Ranges for Digital Signature of Outbound Delivery Documents

Ensure that you select the **WS Active** checkbox. The system uses these settings to trigger web service for an outbound delivery.

- Defined rejection codes for web services. You do this in Customizing for **Sales and Distribution**, under **Logistics Execution**  **Shipping**  **Deliveries**  **Country-Specific Functions**  **Portugal**  **Define Rejection Codes** .

Features

At the time of performing a post goods issue for a delivery document, the system triggers the web service. A request message is generated that contains company details, customer details, document header and product details and is sent to the AT. AT validates the request and returns a response message. This response message contains a unique code (AT code) only in case of successful validation of the request. In case of a failure, the AT sends a rejection code(s).

Reports

Local version Portugal provides the following reports for web services in **Sales and Distribution**(SD):

- Monitoring tool
- Manage username and password

These reports are described in the following documentation.

Monitoring Tool for Web Services

Use

You use the **WSPT_MONITOR** report to process billing documents or shipment documents using web service process. Documents using web service are processed by the tax authorities. For more information, refer to the report documentation in the system.

Activities

To access this report, on the **SAP Easy Access** menu, choose **Logistics**  **Sales and Distribution**  **Shipping and Transportation**  **Outbound Delivery**  **Country-Specifics**  **Portugal**  **Monitoring Tool for Web Services** .

Manage Username and Password for Web Services

Use

You use the **WSPT_STORE_PASSWORD** report to store user names and passwords necessary to communicate with the Portuguese tax authority (Autoridade Tributária, AT) web service. For more information, refer to the report documentation in the system.

Activities

To access this report, on the **SAP Easy Access** menu, choose **Logistics**  **Sales and Distribution**  **Shipping and Transportation**  **Outbound Delivery**  **Country-Specifics**  **Portugal**  **Manage Username and Password for Web Services** .

SAF-T for Delivery Documents

Use

In Portugal, as per the law, all entities dealing with domestic transport of goods must submit the transport details via [Standard Audit File for Tax purposes](#) (SAF-T) to the Portuguese tax authority (Autoridade Tributária, AT) for a specific period. Entities use the application that the tax authority provides on its portal to upload the SAF-T file.

Prerequisites

Ensure that your system is configured such that all entities responsible for local transport of goods can communicate with the [Autoridade Tributária](#) via SAF-T. For more information, refer SAP Note [1872138](#) .

Features

After you have performed post goods issue for a delivery document, use the **SIPT_GM_SAFT_PT_XML** report to generate an XML SAF-T file. Then, upload this XML file to the tax authority portal. The portal returns a response XML file that contains an AT code in case the file is accepted and updates this response file in the SAP system. Note that this response is available for download from the portal. The portal also returns an error message in the file in case of a validation failure.

Reports

Local Version Portugal comes with a report for XML file creation in [Sales and Distribution](#) (SD). The report is described in the following documentation.

Create SAFT-PT XML File

Use

You use the **SIPT_GM_SAFT_PT_XML** report to create an XML file that contains delivery details and submit the file to the tax authorities when required. For more information, refer to the report documentation in the system.

Activities

To access this report, on the [SAP Easy Access](#) menu, choose [►►Logistics ► Sales and Distribution ► Shipping and Transportation ► Outbound Delivery ► Country-Specifics ► Portugal ► SAF-T: XML File Creation ►](#).

Archiving Outbound Delivery Data

Data Archiving removes mass application data from the database, which the system no longer needs, but that must still be available for analyzing later.

Use

You can use the archiving objects to archive outbound deliveries' data in the respective application tables listed below.

Application Table	Archiving Object
SIPT_LIKP	RV_LIKP
SIPT_IF_LIKP	RV_LIKP
SIPT_GAPS_LIKP	PT_LIKPGAP

This data is copied to external archive files and later deleted from the database.

Process

1. Write

Schedule the write function in **Archive Administration** (transaction **SARA**). This function selects transactional data of all vendors that match the selection criteria and writes them to one or more archive files.

The write program supports the ADK interruption concept; this means that you can interrupt the write function and continue it at a later time.

2. Delete

After you have written all archivable data, delete the archived data from the database using delete function in **Archive Administration** (transaction **SARA**). The delete program reads data from the archived files and deletes from the database. Before it deletes the data from the database, the program checks whether the data was written successfully to the archive file (read verification).

The delete program comes with the standard variants, production mode (SAP&PROD) and test mode (SAP&TEST). Choose the test mode, only if you want to simulate the data and not actually delete the data from the database.

Note that the delete program can access only one archive file at a time.

3. Read

You can display archived data using read function on the initial screen of **Archive Administration** (transaction **SARA**).

Result

You have relocated all data that meet the archivability criteria from the database to external archive files.

Related Information

Archiving Settlement Data

Data Archiving removes mass application data from the database, which the system no longer needs, but that must still be available for analyzing later.

Use

You can use the archiving objects to archive settlement data in the respective application tables listed below.

Application Table	Archiving Object
SIPT_WBRK	WBU, WCI, WLF, WRECH, WREG, WSI, WZR
SIPT_GAPS_WBRK	PT_WBRKGAP

This data is copied to external archive files and later deleted from the database.

Process

1. Write

Schedule the write function in **Archive Administration** (transaction **SARA**). This function selects transactional data of all vendors that match the selection criteria and writes them to one or more archive files.

The write program supports the ADK interruption concept; this means that you can interrupt the write function and continue it at a later time.

2. Delete

After you have written all archivable data, delete the archived data from the database using delete function in [Archive Administration](#) (transaction **SARA**). The delete program reads data from the archived files and deletes from the database. Before it deletes the data from the database, the program checks whether the data was written successfully to the archive file (read verification).

The delete program comes with the standard variants, production mode (SAP&PROD) and test mode (SAP&TEST). Choose the test mode, only if you want to simulate the data and not actually delete the data from the database.

Note that the delete program can access only one archive file at a time.

3. Read

You can display archived data using read function on the initial screen of [Archive Administration](#) (transaction **SARA**).

Result

You have relocated all data that meet the archivability criteria from the database to external archive files.
