

## Create Purchase Order and Review the Freight Unit

| Explanation                                                                                                                                                                                                                          | Screenshot                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <p>1. The search term <b>CREATE PURCHASE</b> was entered to search for available apps around purchase order creation.</p> <p>Choose <i>Create Purchase Order - Advanced</i> to continue.</p>                                         |    |
| <p>2. The supplier data and organizational data were already entered for your convenience.</p> <p>Expand the item overview to enter the item details next.</p>                                                                       |   |
| <p>Check the item details already entered for your convenience.</p> <p>For the purpose of this demonstration, see the material, the quantity, the delivery date and the plant maintained.</p> <p>Choose <i>Next</i> to continue.</p> |  |

| Explanation                                                                                                                                                                                                                            | Screenshot                                                                           |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <p>3. You want to receive an inbound delivery for further processing in transportation management.</p> <p>Choose <i>Inbound Delivery</i> from the confirmation control value list to proceed.</p>                                      |    |
| <p> Note that purchase order 4500000069 has a type that allows integration with transportation management.</p> <p>Choose <i>Next</i> to continue.</p> |   |
| <p>4. Choose the <i>Order Integration Worklist</i> app to proceed.</p>                                                                                                                                                                 |  |

| Explanation                                                                                                                                                                                                               | Screenshot                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 5. Choose freight unit 5105, which was created for the previously entered purchase order, to proceed.                                                                                                                     |    |
| <p>Note, that freight unit 5105 was created based on the freight unit building rule FUBR_S4TM1.</p> <p>Choose <b>Next</b> to continue.</p>                                                                                |   |
| <p>The details entered in the purchase order fill in the source and destination locations, the dates at the destination, the materials, and the quantities in the freight unit.</p> <p>Click <b>Next</b> to continue.</p> |  |

| Explanation                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Screenshot                                                                           |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <p>6. Choose <i>Document Flow</i> to proceed.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |    |
| <p> The document flow can be reviewed to trace the complete sequence of related documents.</p> <p>When a subsequent document, like a freight unit, is created based on a preceding document, such as a purchase order, the system generates a document flow. This document flow shows the entire sequence of related documents and their statuses, indicating whether they are completed, open, in process, or in another state.</p> <p>This concludes the simulation.</p> |  |
