

Review Package Building

Explanation	Screenshot
1. Choose the Create Sales Orders - VA01 app as part of the Sales Document group.	
2. The sales order type and the organizational data were already entered for your convenience. Choose <i>Continue</i> to proceed.	
3. Sales order header data as well as two sales order items were already entered for your convenience. Choose <i>Save</i> to proceed.	

Explanation	Screenshot
4. Note the sales order number displayed at the bottom of the screen. Choose <i>Back</i> to return to the home screen.	
5. Choose the Order Integration - Worklist app as part of the Logistics Integration group.	
6. Choose the freight unit number 5110 associated with the sales order 381.	

Explanation	Screenshot
7. Choose in the area below the scroll bar to scroll down.	
8. In the Item Hierarchy, you can observe the results of the automatic package-building process. Instead of seeing 100 pieces of material TM-MAT-P1 entered into the sales order, you will notice several packages, each weighing less than 500 kg, that have been created by the automatic packaging logic. Scroll up by choosing the scroll button .	

Explanation	Screenshot
9. Choose the freight unit building rule <i>FUBR-PB-00</i> to explore the configuration for package building next.	
A unified package building profile assigned to the freight unit building rule manages the automatic logic for building packages. This concludes this simulation.
