

Add Service Items to a Freight Order and Create a Service Order

Explanation	Screenshot
1. Choose the <i>Freight Orders Worklist</i> app to get started.	
2. Choose freight order 20000110 to open it.	
3. Choose <i>Edit</i> .	

Explanation	Screenshot
4. The rows that contain the product TM-MAT-P2 were already selected for your convenience. You can add services directly to the freight order if the logistics provider executing the service is the same one responsible for the transport. To add a service for the selected items/products, choose <i>Service</i> from the dropdown menu.	
5. A service has been added to each pallet for the product TM-MAT-P2. The service is displayed hierarchically under the item it was created for. Choose Save.	

Explanation	Screenshot
6. If the service is to be performed by a different provider, it cannot be included in the freight order for the carrier; instead, a separate service order must be created. Service orders can be created at the header level of the freight order if the service applies to all items or at the item level if the service pertains only to a specific subset of items. To create a service order associated with the entire freight order, choose <i>Create Service Order</i>.	
7. Choose <i>Continue</i> to create a service order with document type SVO2.	

Explanation	Screenshot
8. On the General Data tab of the service order, you can select the service provider. Choose <i>TM-CAR-98</i>.	
9. The service order contains details about the service provider, organizational data to clarify procurement responsibilities, and information about rendered services. Choose <i>Save</i> to return to the freight order.	
10. Choose the <i>Document Flow</i> tab to show the associated service order(s).	

Explanation	Screenshot
11. The service order is shown as a successor document of the freight order in the document flow. Choose Save. This concludes this simulation.
