

Compare the Standard and Shortcut Process

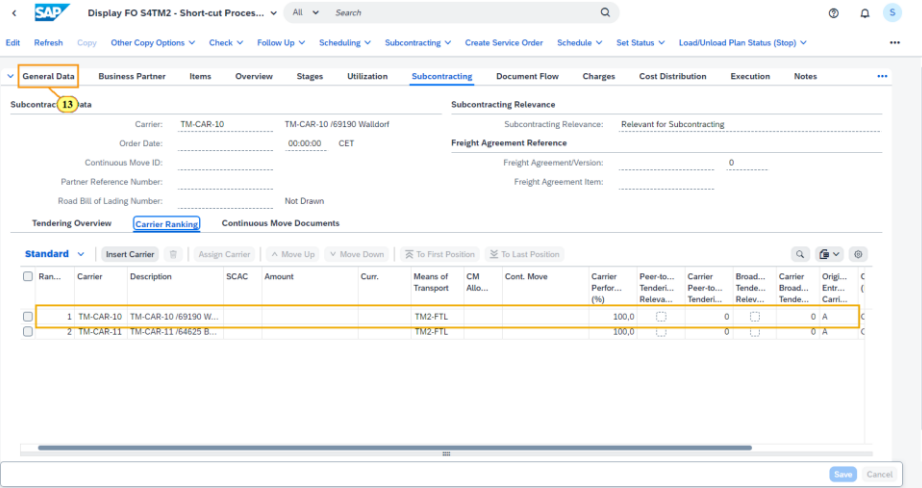

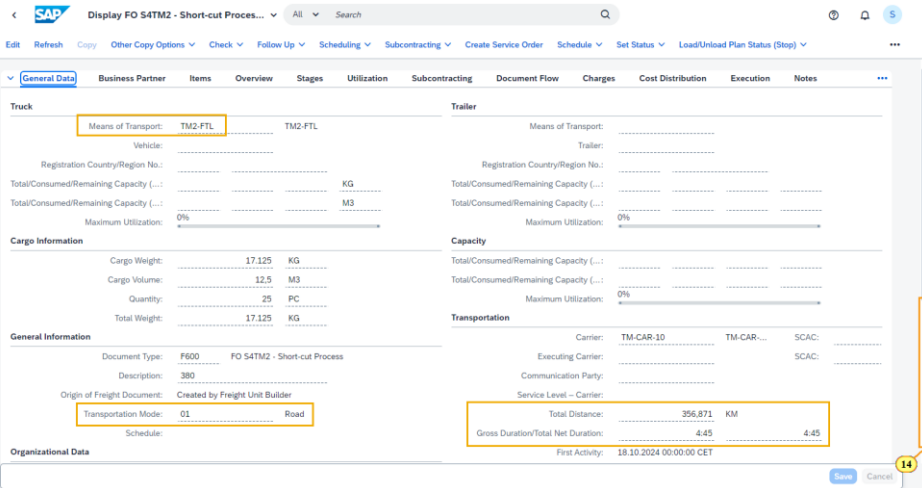

Explanation	Screenshot
1. To open the worklist for freight orders, choose the app corresponding to it.	
2. To explore the document flow of a specific freight order, choose document 200000102.	
In the standard process/document flow, freight orders are created based on freight units, and the freight units are created based on deliveries or orders. This document flow shows a standard process: Freight order 20000102 has	

Explanation	Screenshot
freight unit 5106 as a predecessor document. - Freight unit 5106 has been created based on outbound delivery 80000163. - Outbound delivery 80000163 has been created with reference to sales order 372. To navigate to your home page, choose <i>Next</i>.	
3. To create a new sales order, choose the <i>Sales Documents</i> tab.	 The screenshot shows the SAP Fiori home page. The top navigation bar includes the SAP logo, a 'Home' dropdown, a search bar, and several tabs: 'Order Management', 'Logistics Integration', 'Planning', 'Settlement', 'Contract Management', 'Charge Management', 'TM Master Data', 'Profiles and Settings', 'Sales Documents' (highlighted with an orange box and a yellow callout bubble with the number 3), and 'Shipping'. Below the navigation bar, there are several worklist and overview pages: 'Freight Orders Worklist', 'Freight Bookings Worklist', 'Create Road Freight Order', 'Edit Road Freight Order', 'Freight Order Execution Monitoring Overview Page', and 'Freight Order Quantity Analysis Overview Page'. At the bottom, there are buttons for 'Forwarding Orders Worklist', 'Create Forwarding Order', and 'Edit Forwarding Order'.

Explanation	Screenshot
4. To create a sales order, choose the <i>Create Sales Order (VA01)</i> app.	
5. The order type and organizational data have been pre-filled for your convenience. Choose <i>Continue</i> to proceed.	
6. For your convenience, sold-to-party, ship-to-party, customer reference, material, order quantity, and requested delivery date have been pre-filled. To finish creating the sales order, choose <i>Save</i>.	

Explanation	Screenshot
7. Note the sales order number shown at the bottom of the screen. Sales order 380 with order type S4TM2 was saved successfully. To navigate back to the homepage, choose the SAP logo.	
8. To check which TM documents were created for the sales order, choose the <i>Logistics Integration</i> tab.	
9. To proceed, choose the <i>Order Integration Worklist</i> app.	

Explanation	Screenshot
10. Since you expect a freight order due to the short-cut process, open the „All Order-Based Freight Orders“ query.	
11. Choose freight order 20000106 to explore its document flow.	
12. The document flow includes only the sales order and the freight order. As a result of the shortcut process, the freight order is created directly upon saving the sales order. The freight unit is skipped in this process. Therefore, only sales order 380 and freight order 200000106 exist in the document hierarchy.	

Explanation	Screenshot
To proceed, choose the <i>Subcontracting</i> tab.	
13. In the shortcut process, the subcontracting process is triggered directly upon the creation of the freight order. Therefore, a carrier ranking is visible on the Subcontracting tab, and carrier „TM-CAR-10“ has been automatically selected in this scenario.	
To proceed, choose the <i>General Data</i> tab.	
14. Still on the <i>General Data</i> tab, the relevant fields on the freight order, such as Means of Transport, Transportation Mode, Distance, and Duration, have been calculated.	
To scroll down, choose the area below the scroll bar.	

Explanation	Screenshot
i This screen shows that the organizational data was also automatically retrieved for the freight order. The source's address data, the transport's destination, and departure and arrival times were also determined automatically. This concludes the demonstration.
