

Create an Air Freight Booking

| Explanation                                                                                 | Screenshot                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. Choose the <i>Create Air Freight Booking</i> app to get started.                         |  The screenshot shows the SAP Fiori 'Home' dashboard. The 'Order Management' section is active. Under the 'Freight Bookings' category, the 'Create Air Freight Booking' app is highlighted with an orange border and a yellow circle with the number '1' next to it. Other visible apps include 'Freight Orders', 'Create Road Freight Order', 'Edit Road Freight Order', 'Freight Order Execution Monitoring', 'Freight Order Quantity Analysis', 'Create Ocean Freight Booking', 'Edit Ocean Freight Booking', and 'Edit Air Freight Booking'. |
| 2. Choose document type <b>BAIR</b> ( <i>Air Freight Booking</i> ).                         |  The screenshot shows the 'Create Air Freight Booking' app interface. The 'Freight Booking Type' dropdown menu is open, displaying a list of options: 'BAIR', 'BST1', and 'Search Results'. The 'BAIR' option is highlighted with an orange border and a yellow circle with the number '2' next to it. Below the dropdown, there is a 'Continue' button.                                                                                                                                                                                        |
| 3. Choose <i>Continue</i> to start creating an air freight booking with document type BAIR. |  The screenshot shows the 'Create Air Freight Booking' app interface. The 'Freight Booking Type' dropdown menu is now closed, and 'BAIR' is selected. The 'Continue' button at the bottom right is highlighted with an orange border and a yellow circle with the number '3' next to it.                                                                                                                                                                                                                                                       |

| Explanation                                                                                                                                                                                                                                                                                       | Screenshot                                                                           |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <p>4. Initially, most information in the air freight booking is empty.</p> <p>On the <i>Booking</i> tab, you can maintain general data such as airline codes, airport codes for departure and arrival, and MAWB number.</p> <p>Choose in the <b>area below the scroll bar</b> to scroll down.</p> |    |
| <p>5. You can define Unit Load Devices information here when required.</p> <p>Choose in the <b>area below the scroll bar</b> to scroll down.</p>                                                                                                                                                  |   |
| <p>6. On the bottom of the screen you can define handling codes and gateway information.</p> <p>Scroll by choosing the <b>scroll button</b>.</p>                                                                                                                                                  |  |

| Explanation                                                                                                                                                                       | Screenshot                                                                           |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 7. Choose the <i>Capacity and Cargo</i> tab to continue.                                                                                                                          |    |
| 8. The Capacity and Cargo tab allows you to manage cargo information like in the items tab of the ocean freight booking.<br><br>Choose the <i>Operations</i> tab to continue.     |   |
| 9. Additional information, such as accounting, handling, and organizational data is recorded on the Operations tab.<br><br>Choose <i>Booking EDI Data</i> from the dropdown menu. |  |

| Explanation                                                                                                                                                                  | Screenshot                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
