

Create an Ocean Freight Booking

Explanation	Screenshot
1. Choose the <i>Create Ocean Freight Booking</i> app to get started.	
2. Choose document type <i>BST1</i> (<i>Ocean Booking S4TM1</i>).	
3. Choose <i>Continue</i> to start creating an ocean freight booking with document type BST1.	

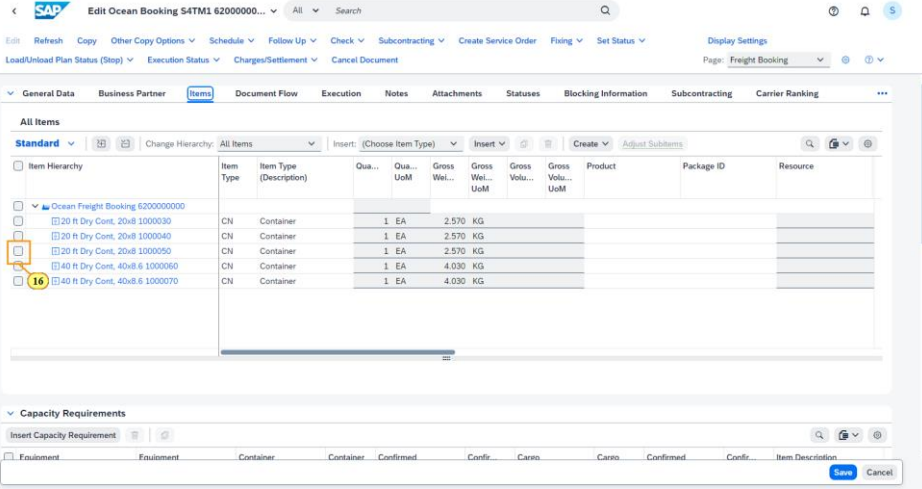

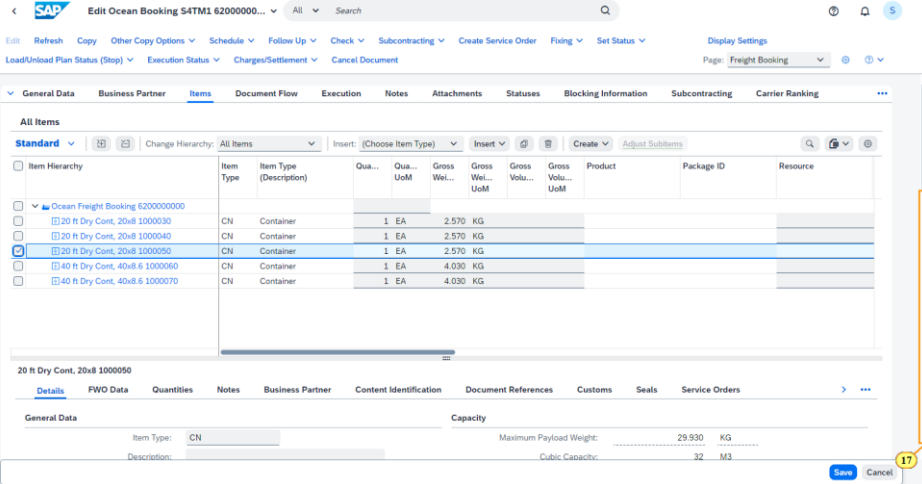

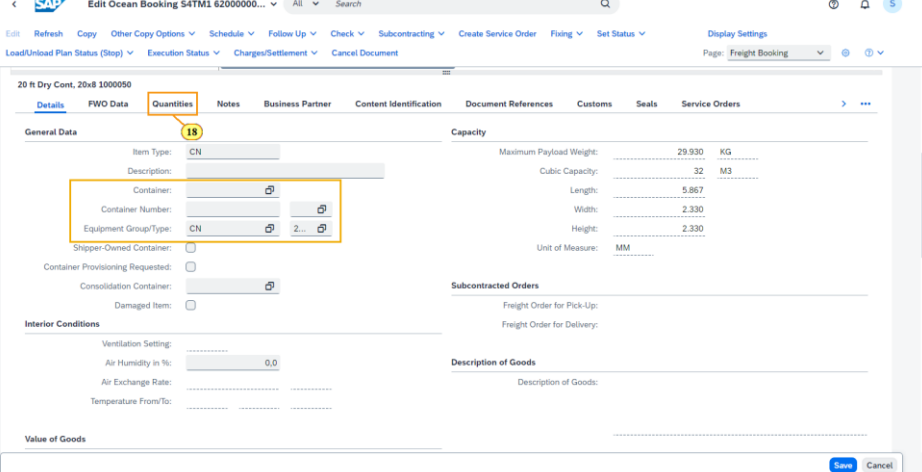

Explanation	Screenshot
4. Initially, most information in the ocean freight booking is empty. Some information, like the purchasing organization, may be pre-filled according to customization settings. Choose in the area below the scroll bar to scroll down.	
5. No capacity requirements exist at this time. Scroll down by choosing the scroll button.	
6. Choose the tab to select it.	

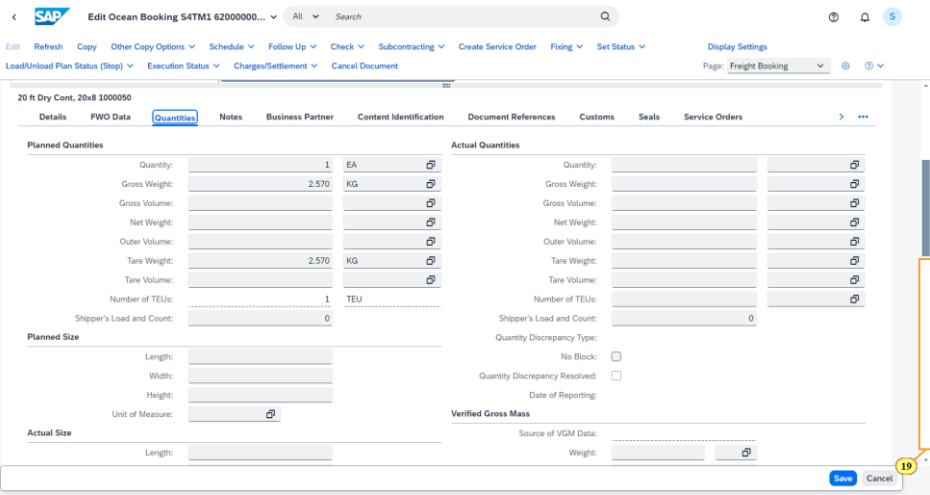

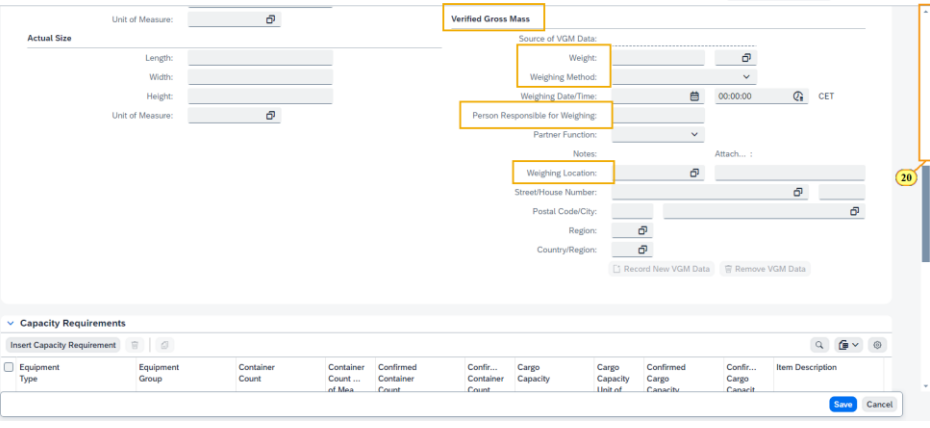

Explanation	Screenshot
7. To fill the ocean freight booking with data, you must start with geographical information by assigning a schedule. Choose <i>Assign</i> from the Schedule drop-down menu.	
8. You can define your search criteria for suitable schedule departures in the Select Schedule Departure pop-up window. You want to search for departures later than 05.01.2025 from the source PORT-DEHAM to the destination PORT-CNSHA. Choose in the area below the scroll bar to scroll down.	

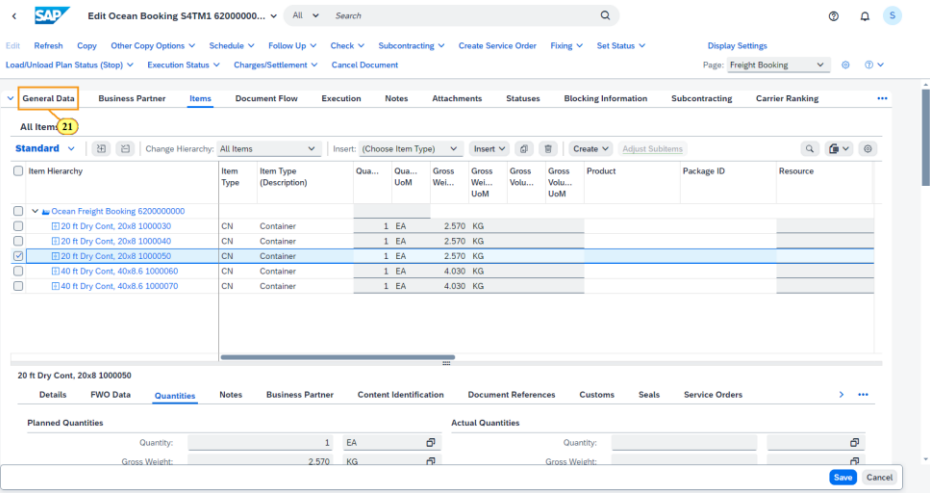

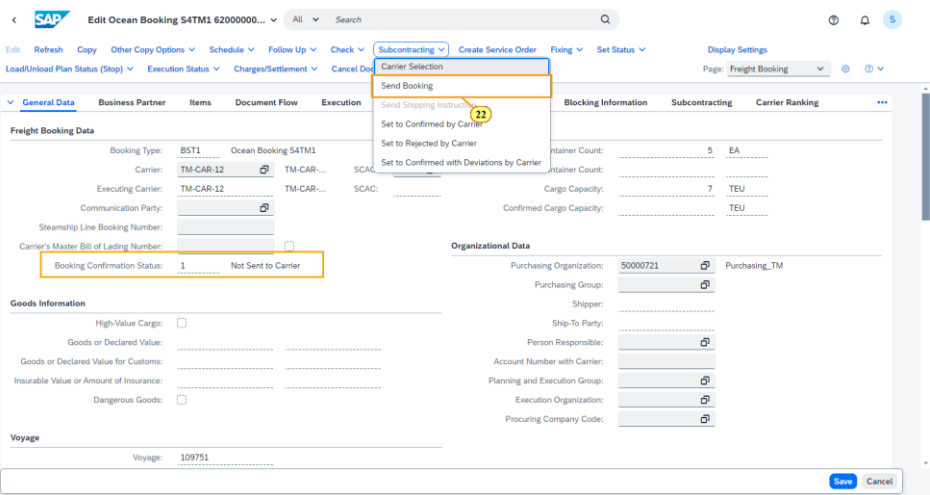

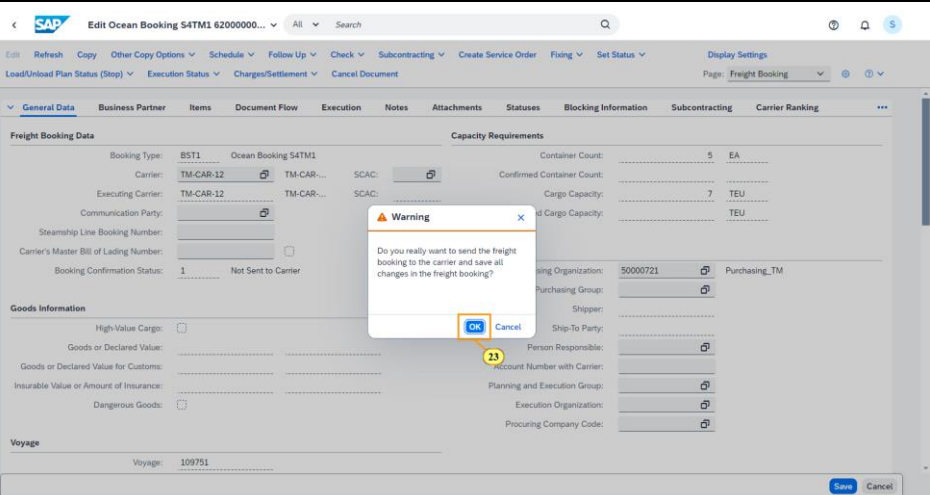

Explanation	Screenshot
9. Choose Search to execute the defined search for departures.	
10. Select the departure on 14.02.2025 by checking the corresponding box.	
11. Choose OK to take over the relevant data from the schedule into the ocean freight booking.	

Explanation	Screenshot
 The Port of Loading and the Port of Discharge have been updated according to the schedule data. The various dates, including the Sailing Date, Cut-off Dates, Expected Arrival Date, and Port Pick-up Date, have been revised. Click <i>Next</i> to continue.	
12. Choose <i>Insert Capacity Requirement</i> to be able to insert the capacity requirements.	

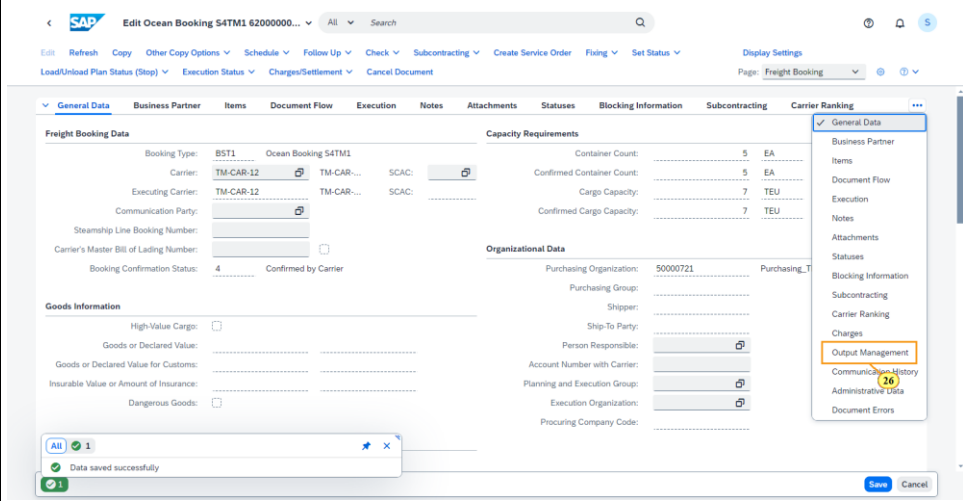

Explanation	Screenshot
13. You require three 20-ft containers of type 20G0 and two 40-ft containers of type 42G0. These values have already been entered for your convenience. Choose Save to save your ocean freight booking.	
14. Scroll up by choosing the scroll button.	
15. Navigate to the <i>Items</i> tab by selecting it.	

Explanation	Screenshot
16. On the Items tab, one container item has been created for each container, per your capacity requirement (three 20-ft containers and two 40-ft containers). Choose the last of the 20-ft container items.	
17. The detailed information for this container becomes visible upon choosing a container item. Choose in the area below the scroll bar to scroll down.	
18. You can maintain information like the container number on the Details tab for the container item. Navigate to the Quantities tab to continue.	

Explanation	Screenshot
19. On the <i>Quantities</i> tab you find the planned and actual quantities for the container item. At this point, you have not filled anything into the container. Therefore, the gross weight still equals the tare weight of the container. Choose in the area below the scroll bar to scroll down.	
20. During ocean transport, it is legally obligated to know and record the actual weight of the container. This data is also stored here as a Verified Gross Mass. All relevant data can be maintained here (Weight, Weighing Method, Weighing Location, Person Responsible for Weighing, ...) Scroll up by choosing the scroll button.	

Explanation	Screenshot
21. Choose the <i>General Data</i> tab to return to the first screen this scenario has started with.	
22. The current booking confirmation status is Not Sent to Carrier . You want to place the booking with the ocean carrier. Therefore, select <i>Send Booking</i> from the Subcontracting dropdown menu.	
23. Choose <i>OK</i> to confirm the pop-up window.	

Explanation	Screenshot
24. The Booking Confirmation Status has changed to Sent to Carrier. While in the real world, the carrier may send a confirmation message, you can also set the status manually if you have discussed the booking with the carrier over the phone. Select <i>Set to Confirmed by Carrier</i> from the Subcontracting dropdown menu.	The screenshot shows the SAP Ocean Booking S4TMI 62000000... interface. The 'Booking Confirmation Status' is set to 2, labeled 'Sent to Carrier'. The 'Subcontracting' dropdown menu is open, showing options: 'Send Booking', 'Send Shipping Instruction', 'Set to Confirmed by Carrier' (highlighted with a yellow box and a '24' icon), 'Set to Rejected by Carrier', and 'Set to Confirmed with Deviations by Carrier'. The 'Freight Booking Data' section shows Booking Type: BST1, Ocean Booking S4TMI, Carrier: TM-CAR-12, and Executing Carrier: TM-CAR-12. The 'Goods Information' section shows High-Value Cargo, Goods or Declared Value, Goods or Declared Value for Customs, Insurable Value or Amount of Insurance, and Dangerous Goods. The 'Voyage' section shows Voyage: 109751. The 'Organizational Data' section shows Purchasing Organization: 50000721, Purchasing Group: Purchasing_TM, Shipper, Ship-To Party, Person Responsible, Account Number with Carrier, Planning and Execution Group, Execution Organization, and Procuring Company Code.
25. The Booking Confirmation Status has changed to Confirmed by Carrier. Choose <i>Save</i> to continue.	The screenshot shows the SAP Ocean Booking S4TMI 62000000... interface. The 'Booking Confirmation Status' is set to 4, labeled 'Confirmed by Carrier'. The 'Subcontracting' dropdown menu is open, showing options: 'Send Booking', 'Send Shipping Instruction', 'Set to Confirmed by Carrier' (highlighted with a yellow box and a '25' icon), 'Set to Rejected by Carrier', and 'Set to Confirmed with Deviations by Carrier'. The 'Freight Booking Data' section shows Booking Type: BST1, Ocean Booking S4TMI, Carrier: TM-CAR-12, and Executing Carrier: TM-CAR-12. The 'Goods Information' section shows High-Value Cargo, Goods or Declared Value, Goods or Declared Value for Customs, Insurable Value or Amount of Insurance, and Dangerous Goods.
