

Execute an Optimization Run

Explanation	Screenshot
1. To start planning, open the <i>Transportation Cockpit</i> app.	
2. To load your selection criteria for planning, choose the saved search <i>PLAN_00</i> .	
3. To open the transportation cockpit, choose <i>Continue</i> .	

Explanation	Screenshot
4. To proceed, choose the column header indicating the planning status.	
5. Choose <i>Unplanned</i> from the dropdown menu to filter the freight unit stages list accordingly.	
6. As a result of the filter applied in the previews step, only unplanned freight unit stages are displayed. Choose <i>Select All</i> to proceed.	

Explanation	Screenshot
7. To start the optimizer planning the selected freight units using all available resources and vehicle types in the transportation cockpit, choose <i>Selected Entries with All Resources and Equipment Types</i> from the dropdown menu.	 The screenshot shows the SAP Transportation Cockpit interface. The 'Optimizer Planning' dropdown menu is open, and 'Selected Entries with All Resources and Equipment Types' is selected. The interface displays freight unit stages and road freight orders.
8. The result of the optimization run is the one freight order shown with the temporary order number \$1. To review the planning result in more detail, choose <i>Show Details</i> in the Actions column.	 The screenshot shows the SAP Transportation Cockpit interface after the optimization run. The 'Freight Unit Stages' section shows 'No data available'. The 'Road Freight Orders' section shows a single freight order with the temporary order number \$1. The 'Show Details' button is highlighted in the Actions column.
9. Choose <i>Maximize</i> to review the planning result for freight order \$1 in more detail.	 The screenshot shows the SAP Transportation Cockpit interface with the 'Maximize' button highlighted for freight order \$1. The interface displays the detailed planning result for the selected freight order.

Explanation	Screenshot
10. Choose <i>Expand all</i> to review the details of the optimization result for this freight order.	 The screenshot shows the SAP Transportation Cockpit interface. The 'Expand all' button, represented by a square icon with a plus sign, is highlighted with a yellow circle and the number 10. The interface displays a table with columns for Activity, Activity (Descr...), Maxim... Utiliza..., Document, Load Plan Status, Unload Plan Status, Execution Status, Warehouse Processing Status, Goods Movement, Warehouse Door Status, Customs, and Start of Activity. The table lists various activities and their statuses.
11. The freight order starts at shipping point SP_ZASR to load the first freight unit. It continues to shipping point SP_1010 to load the remaining three freight units. It then visits customer locations TMAT00-01 , TMAT00-02 , and TMAT00-03 to deliver and unload those four freight units.	 The screenshot shows the SAP Transportation Cockpit interface. The table displays activities and their statuses. Yellow boxes highlight the shipping points and customer locations: SP_ZASR, SP_1010, TMAT00-01, TMAT00-02, and TMAT00-03. The table lists various activities and their statuses.
Scroll to the right to review the dates and times.	 The screenshot shows the SAP Transportation Cockpit interface. The scroll bar at the bottom of the table is highlighted with a yellow circle and the number 11, indicating the user should scroll to the right to review the dates and times.

Explanation	Screenshot
12. Since you are satisfied with the result, choose Save.	
Having returned to the overview screen for the freight order in the transportation cockpit concludes this demonstration.
