

Explain Transportation Documents

Explanation	Screenshot
1. To open the worklist for freight orders, choose the app corresponding to it.	
2. The worklist shows the freight orders that match the selection criteria of your query. In this example, the „All Road Freight Orders“ query is used. To review the details of a specific freight order, choose freight order 200000102.	
3. The „General Data“ tab contains general information about your freight order, such as cargo information, utilization information, and logistical information, such as distances and durations. To scroll down, choose the area below the scroll bar.	

Explanation

4. This part of the screen contains information such as address data for the source and destination locations, departure and arrival dates, and organizational information.

To scroll up, choose the **area above the scroll bar**.

Explanation	Screenshot
7. This tab provides an overview of the locations visited by the freight order, their sequence, and the activities performed in these locations (like loading and unloading). All activities have a status and planned dates and times. To continue, choose the <i>Subcontracting</i> tab.	
8. This tab provides information on the freight order's subcontracting relevance, the selected carrier, and the relevant freight agreement. In addition, the carrier ranking is displayed, showing the potential carriers and their estimated freight cost. To continue, choose the <i>Document Flow</i> tab.	

Explanation	Screenshot
9. The document flow allows you to explore the links to all related business documents, such as sales orders, deliveries, outbound delivery orders, freight units, freight settlement documents, purchase orders, service entry sheets, and carrier invoice. You can navigate to any of these documents by selecting the corresponding link. To continue, choose the <i>Charges</i> tab.	
10. This tab shows the invoice and charge calculation status and the calculation logic for each charge line. To continue, choose the <i>Cost Distribution</i> tab.	

Explanation

11. This tab shows the total freight charges distributed to the individual delivery items transported via this freight order. The cost distribution is done from the *Charges* tab for each charge item.

To continue, choose the *Execution* tab.

Screenshot

12. This screen shows the information on when and where each activity of the freight order has been executed (e.g., arrival and loading).

To continue, choose the *Statuses* tab.

13. This screen shows an overview of the various freight order statuses like life cycle status, subcontracting status, and execution status.

To continue, choose the *CO2 Emissions* tab

Explanation	Screenshot
i On this screen, you can compare calculated and reported emissions. This concludes the demonstration.	SAP Display Freight Order for S4TM1 200...
