Explanation	Screenshot
7. Choose <i>Transportation Cockpit</i> to open the transportation cockpit with freight unit 5120.	
8. Choose <i>Continue</i> to open the transportation cockpit.	
9. Choose <i>Insert Truck Resource</i> to continue.	

Explanation 10. Resource TM2-LOADPLAN was already entered for your convenience. This is the resource reviewed earlier in the resource viewer. Choose <i>OK</i> to insert the truck into the planning scope.	Screenshot 
11. Choose the check box for the truck resource entered.	
12. Choose <i>Assign Selected Items</i> to plan freight unit 5120 with resource TM2-LOADPLAN.	

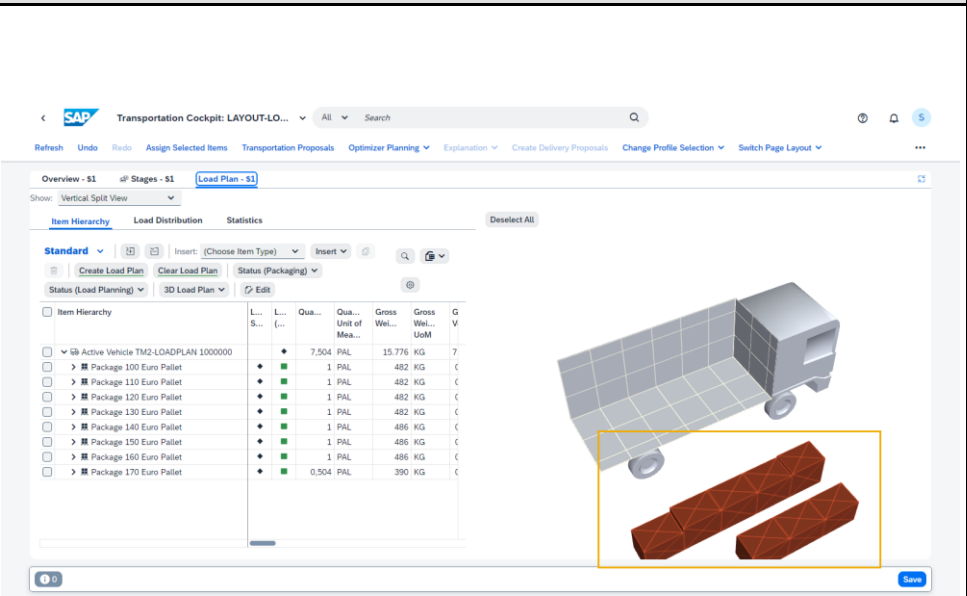

Explanation	Screenshot
13. Choose <i>Show Details</i> in the Action column of freight order \$1 to review the planning result and perform load planning.	
14. Choose <i>Maximize</i> to open the freight order details.	
15. You are happy with the scheduling result and want to continue with load planning. Choose the <i>Load Plan</i> - \$1 tab to select it.	

Explanation

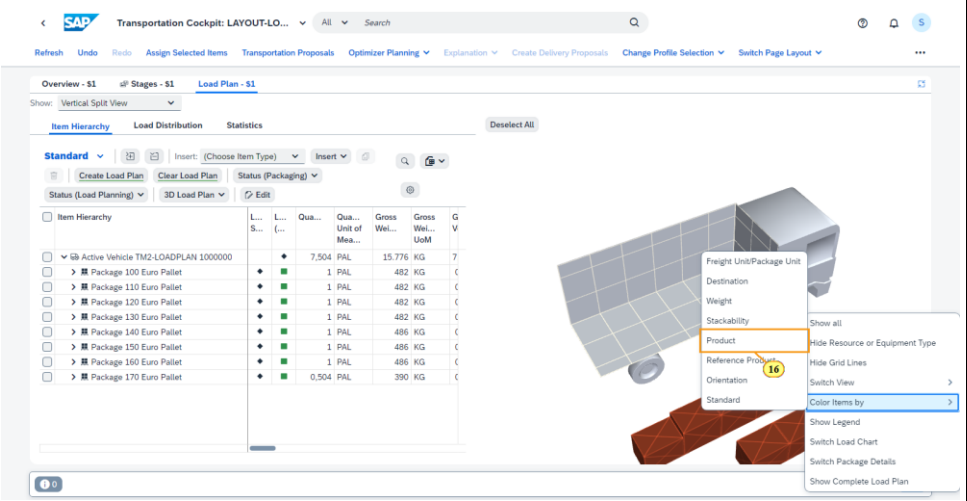

The Load Plan tab shows the assigned packages of the freight order in tabular format and the 3D model of the load plan in graphical format.

Since you have not done load planning, the packages are located next to the truck as the initial load plan.

Screenshot

16. From the context menu of the 3D load plan, choose *Color Items by Product*.

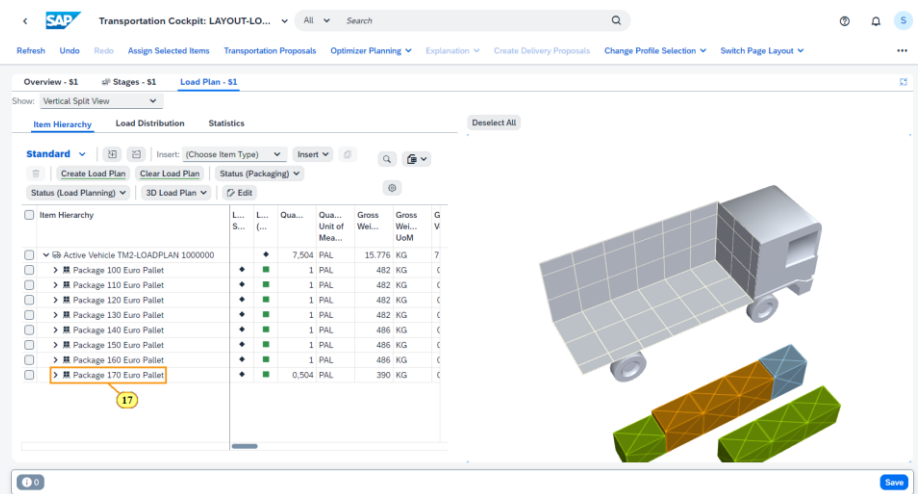

Explanation

17. Coloring packages by various criteria helps to check and review the load plan.

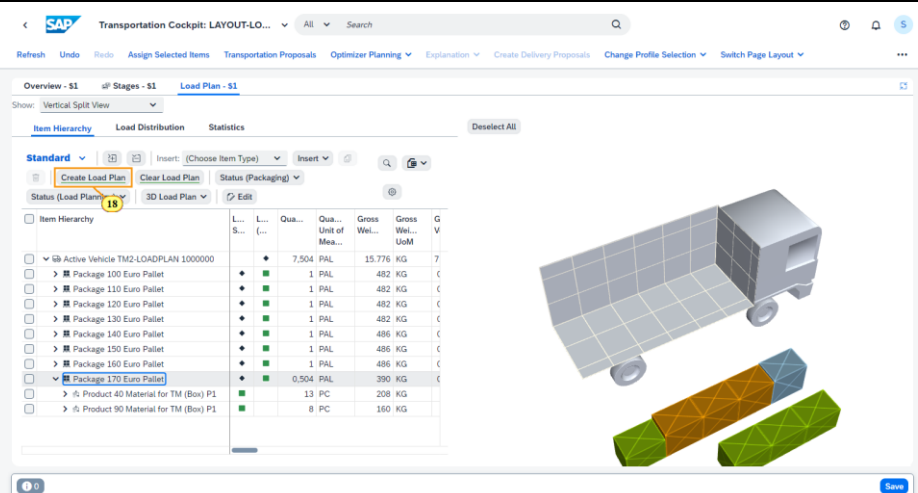

Choose the last package to expand and review its content.

Screenshot

18. The last package consists of two products loaded onto a pallet.

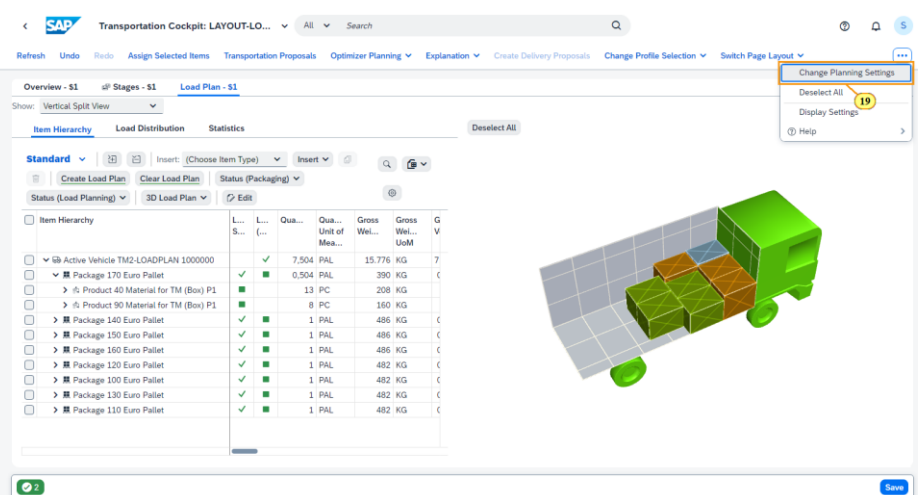

Choose *Create Load Plan*.

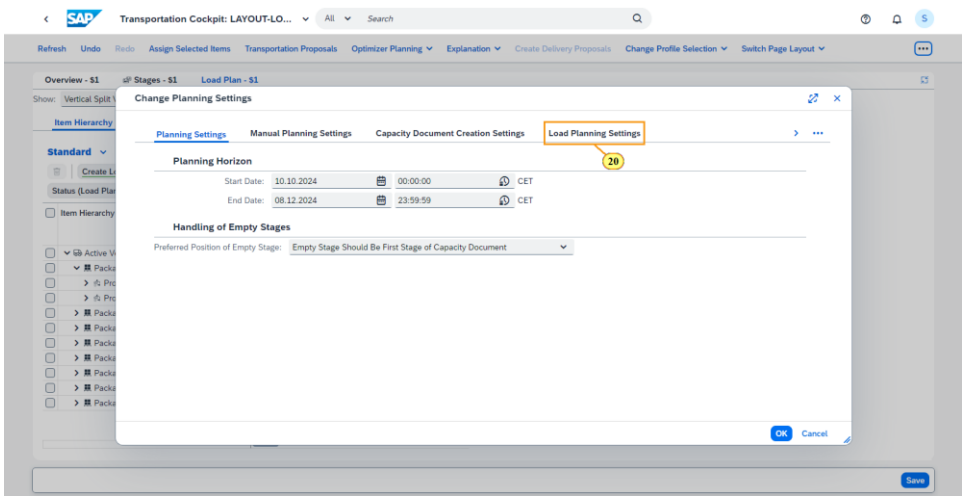

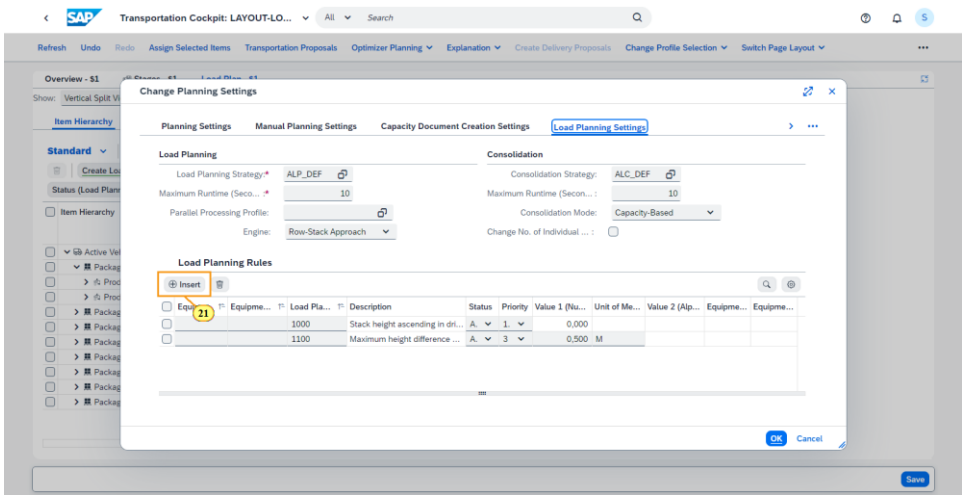

19. The packages are visible on the truck once the load plan has been created.

The load plan has been created in a visual and tabular format, including the loading sequence and exact position of each package on the truck.

However, you are unsatisfied with the planning result and

Explanation	Screenshot
want to check the load planning settings. Select the <i>Change Planning Settings</i> entry by choosing it.	
20. Choose the <i>Load Planning Settings</i> tab.	
21. Choose <i>Insert</i> to insert an additional load planning rule.	

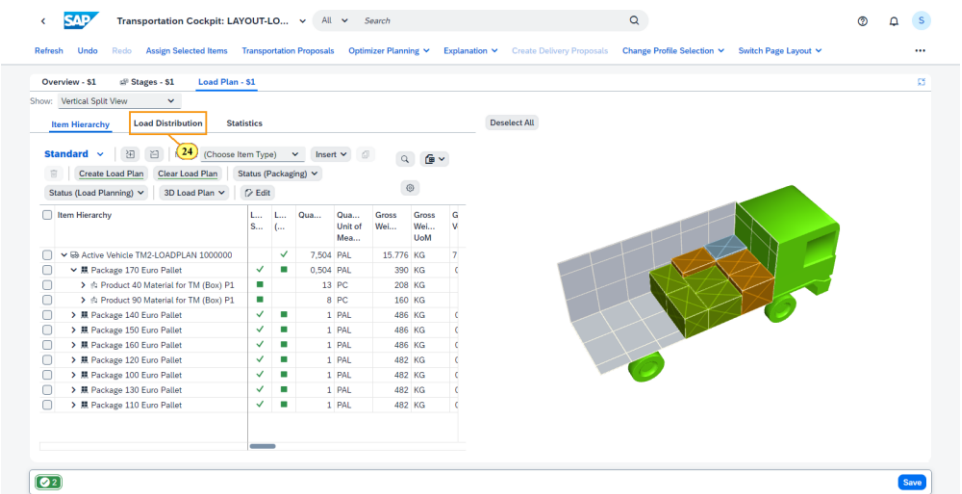

Explanation	Screenshot
An additional load planning rule, 8060, was entered. Click <i>Next</i> to continue.	
22. The purpose of rule 8060 is to stabilize the load by turning the packages of the last row. Choose „OK“ to close the pop-up for the change planning settings.	
23. Choose <i>Create Load Plan</i> to recreate the load plan while considering the additional rule.	

Explanation

24. The load plan has been changed, and the packages in the last row have been turned 90 degrees.

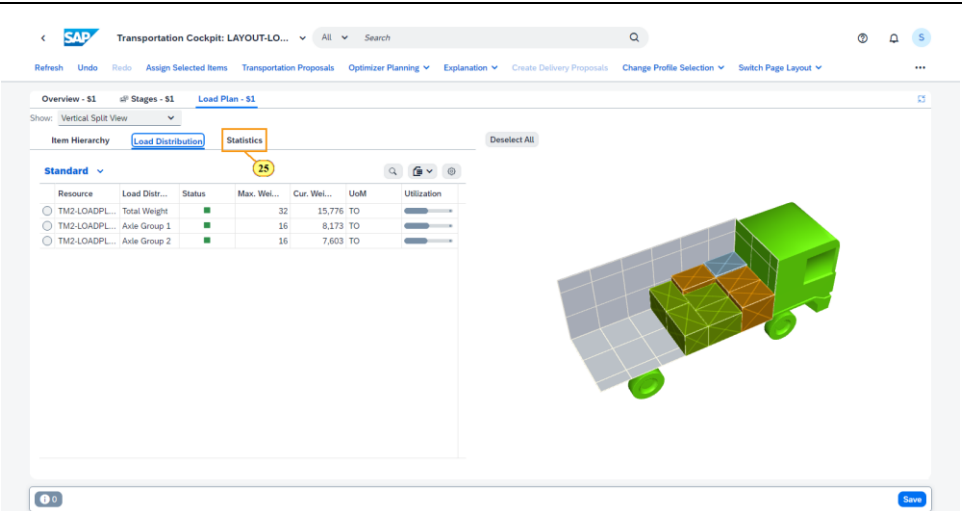

Choose the *Load Distribution* tab to review the numerical results of the load plan.

Screenshot

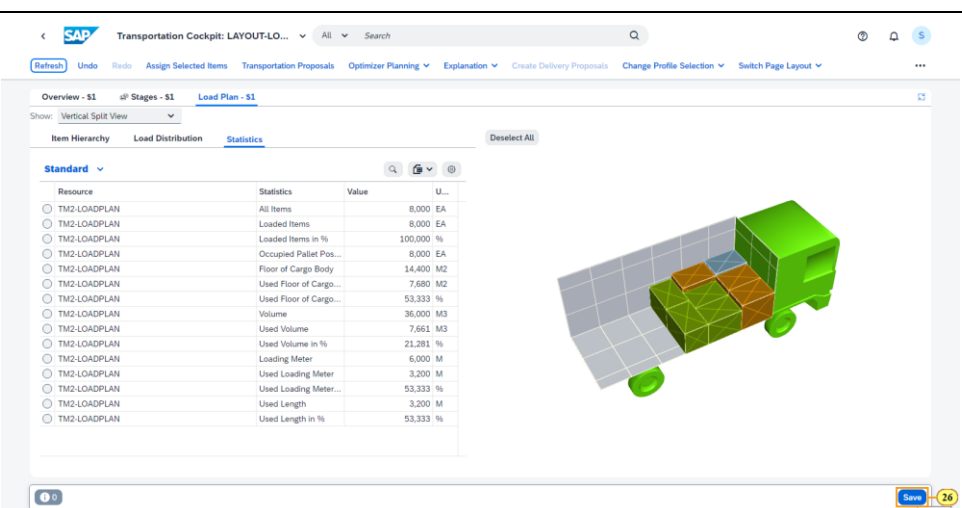

25. The load distribution tab shows how the weight is distributed across the different axle groups of the resource.

Choose the *Statistics* tab to review additional numerical information.

26. The *Statistics* tab shows additional information like the truck's volume or floor space utilization.

Once you are satisfied with the planning result, choose *Save*.

Explanation

The success message for the load planning of freight order 20000110 concludes this demonstration.

Screenshot

The screenshot displays the SAP Transportation Cockpit interface for a freight order. The top navigation bar includes tabs for Overview, Stages, and Load Plan. The Load Plan tab is active, showing a 3D visualization of a truck load plan on the right and a table of statistics on the left. The table lists various statistics for the freight order, including All Items, Loaded Items, and Volume. A success message is displayed at the bottom, indicating that the data was saved successfully and the business document was saved.
