

Perform Interactive Planning

Explanation	Screenshot
1. To start planning, open the <i>Transportation Cockpit</i> app.	
2. To load your selection criteria for planning, choose the saved search <i>PLAN_00</i> .	
3. To open the transportation cockpit, choose <i>Continue</i> .	

Explanation	Screenshot
4. Choose the radio-button for freight unit 5116 to start planning.	 The screenshot shows the SAP Transportation Cockpit interface. The 'Freight Unit Stages (18)' section is expanded, displaying a list of freight units. Freight unit 5116 is highlighted, and its radio button is selected. The 'Road Freight Orders (5)' section is also visible below it.
5. Choose the radio-button for truck type TM-LORRY to continue.	 The screenshot shows the same SAP Transportation Cockpit interface. The 'Trucks (1)' section is expanded, displaying a list of truck types. The 'TM-LORRY' truck type is highlighted, and its radio button is selected.
6. To plan freight unit 5116 to truck type TM-LORRY, choose Assign Selected Items.	 The screenshot shows the same SAP Transportation Cockpit interface. The 'Assign Selected Items' button in the top navigation bar is highlighted with a red box and a yellow circle.

Explanation

7. A new freight order with a temporary order number **\$1** was created.

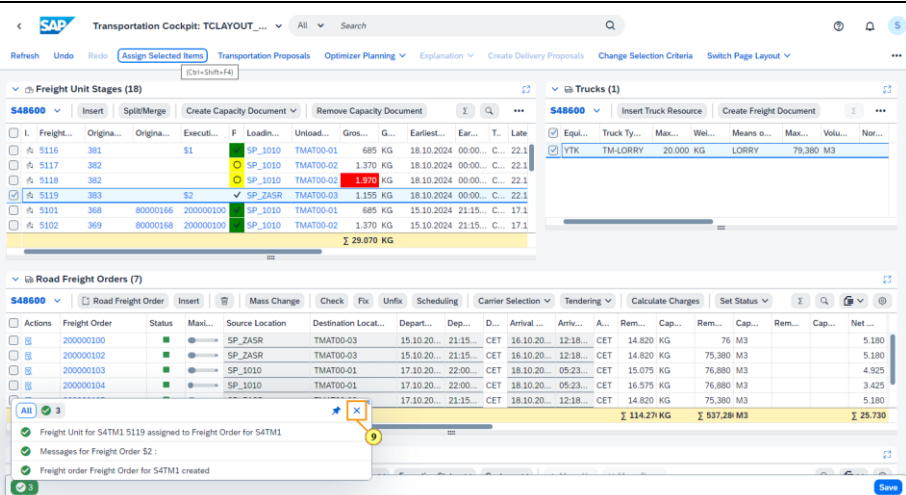

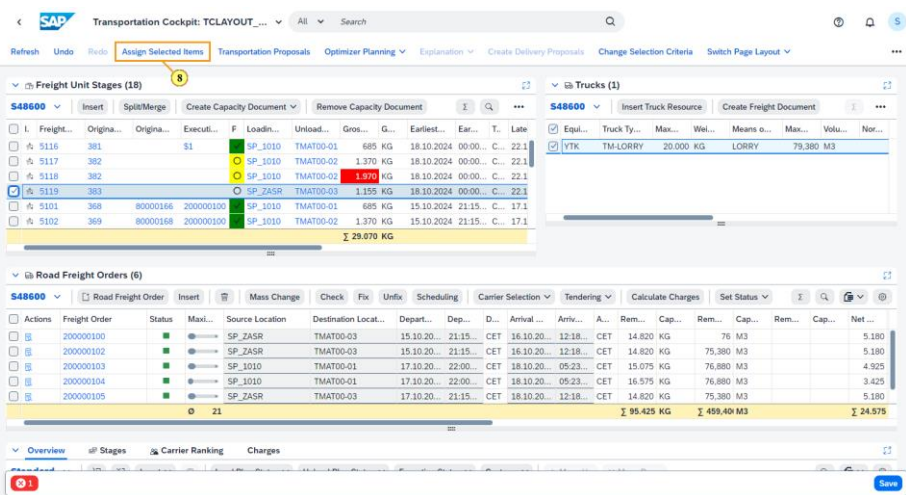

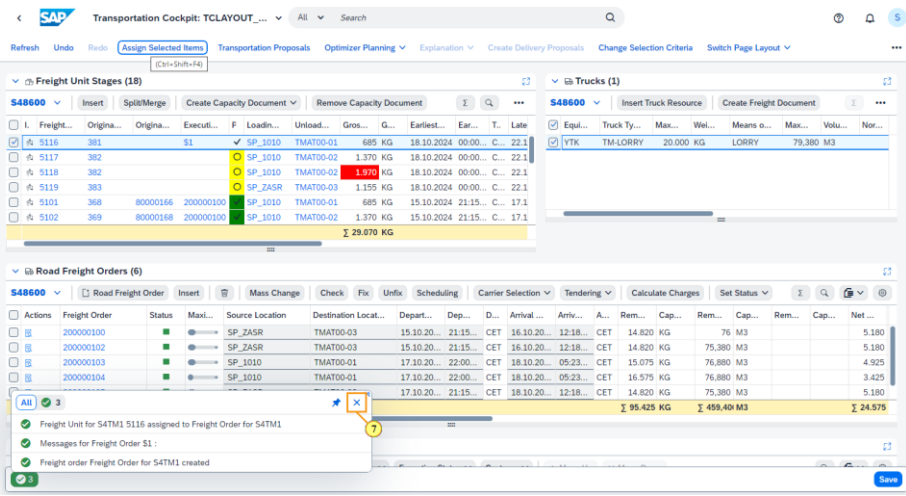

To continue, close the system message window.

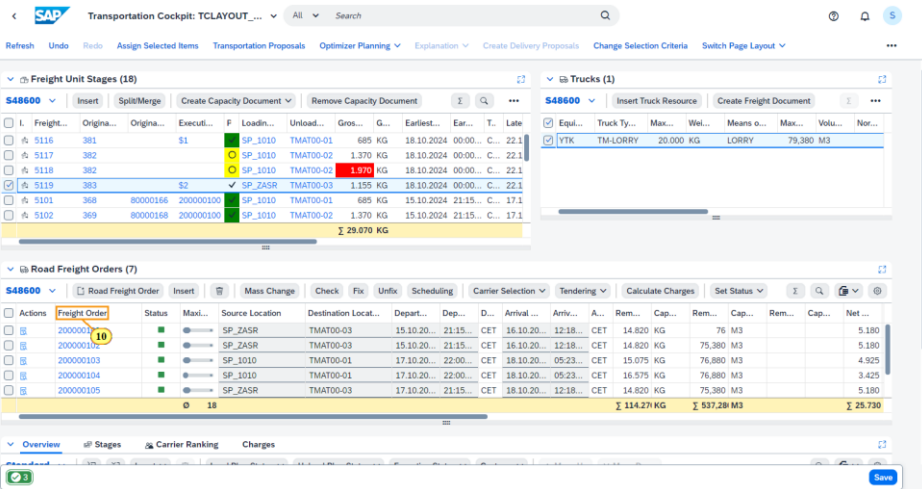

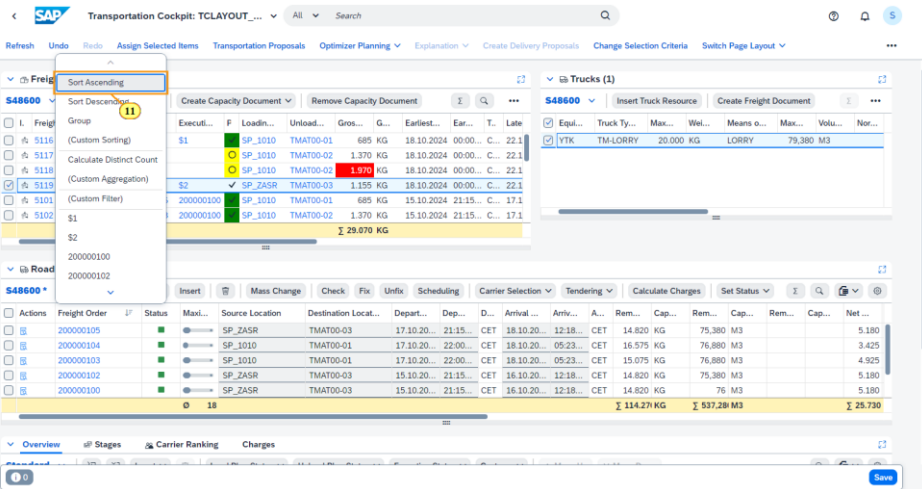

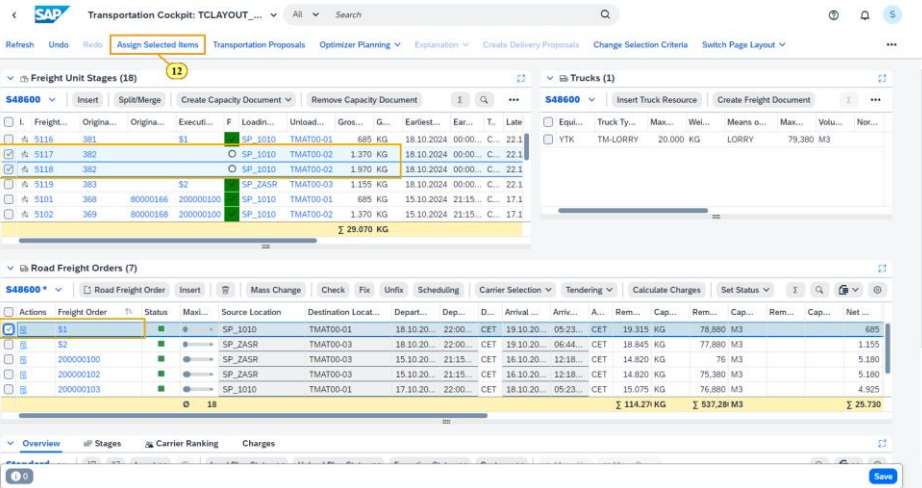

8. Choose *Assign selected items* to create a second freight order, which will assign freight unit **5119** to truck type **TM-LORRY**.

9. A second freight order with a temporary order number **\$2** was created.

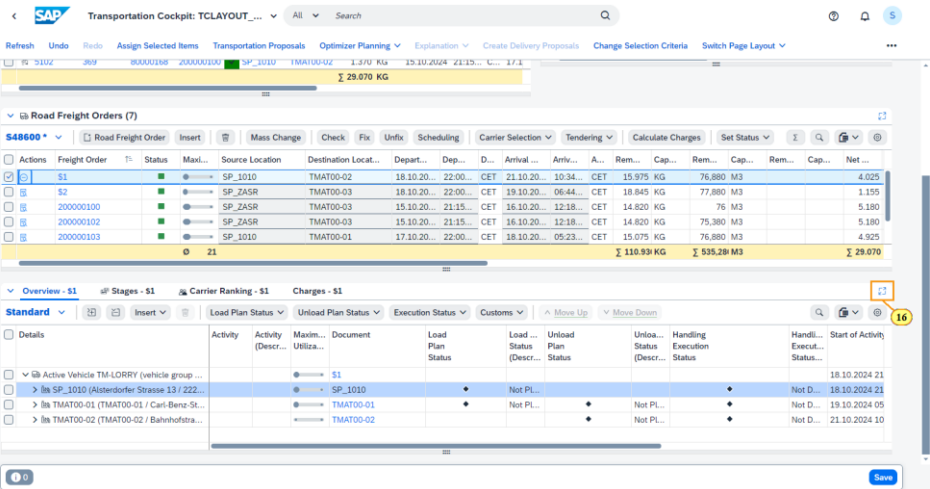

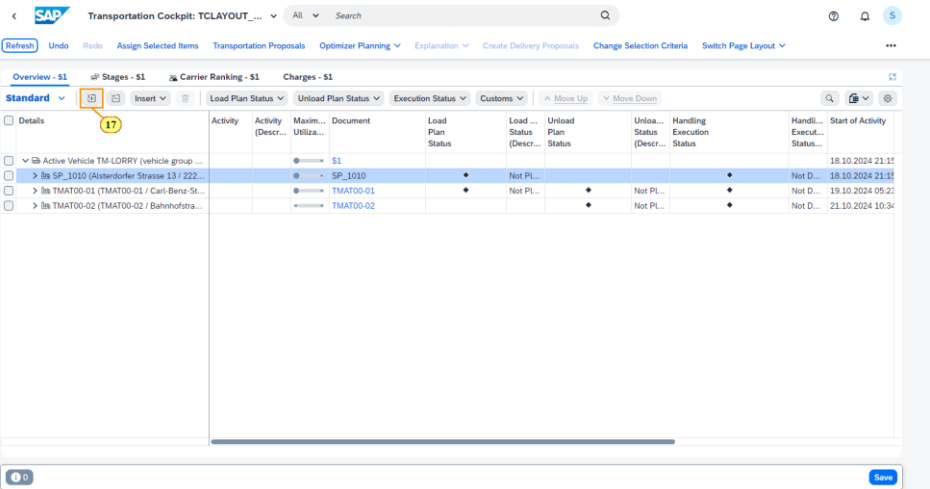

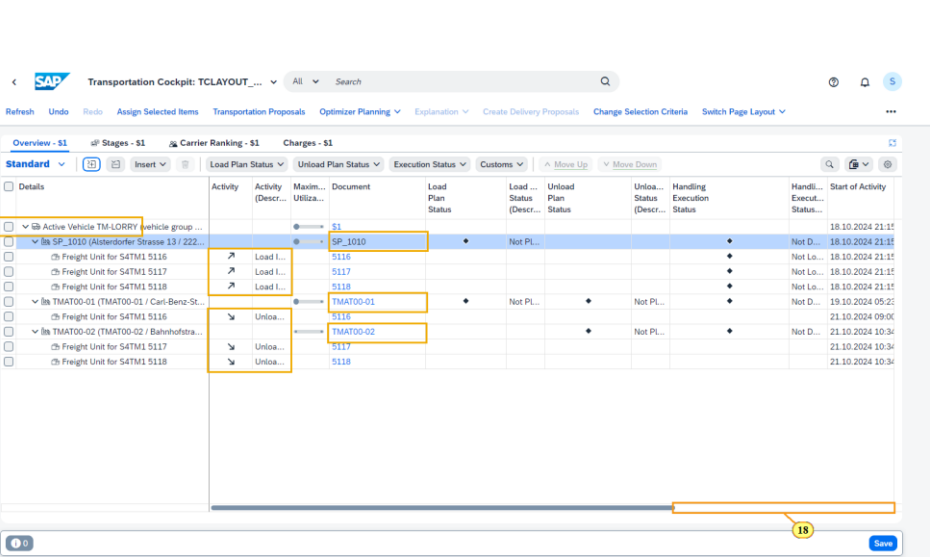

To continue, close the system message window.

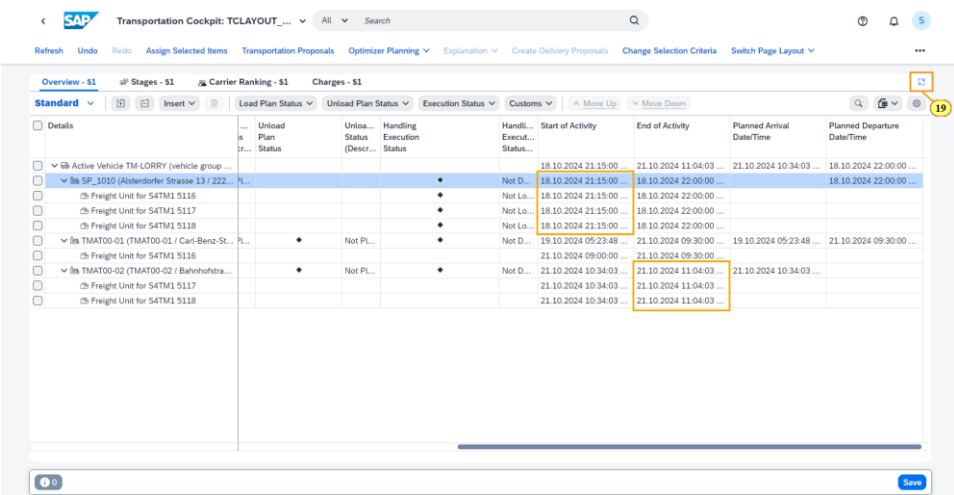

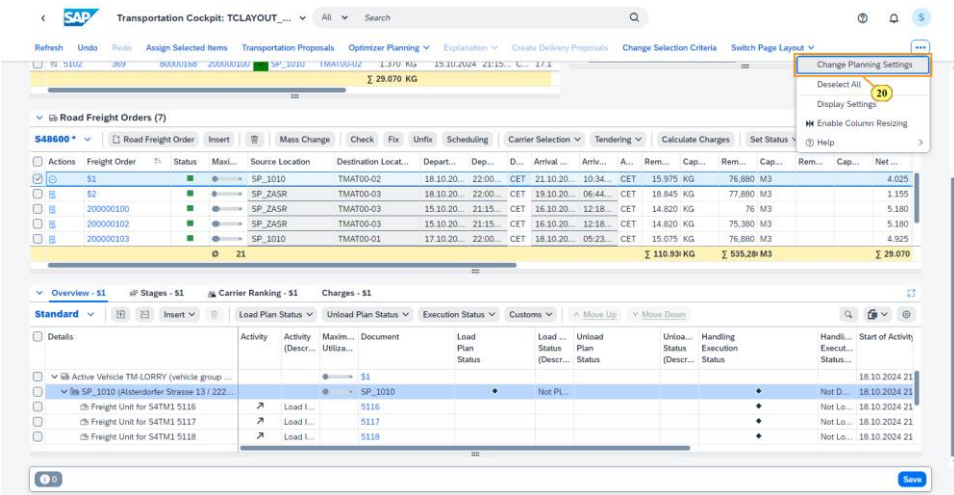

Screenshot

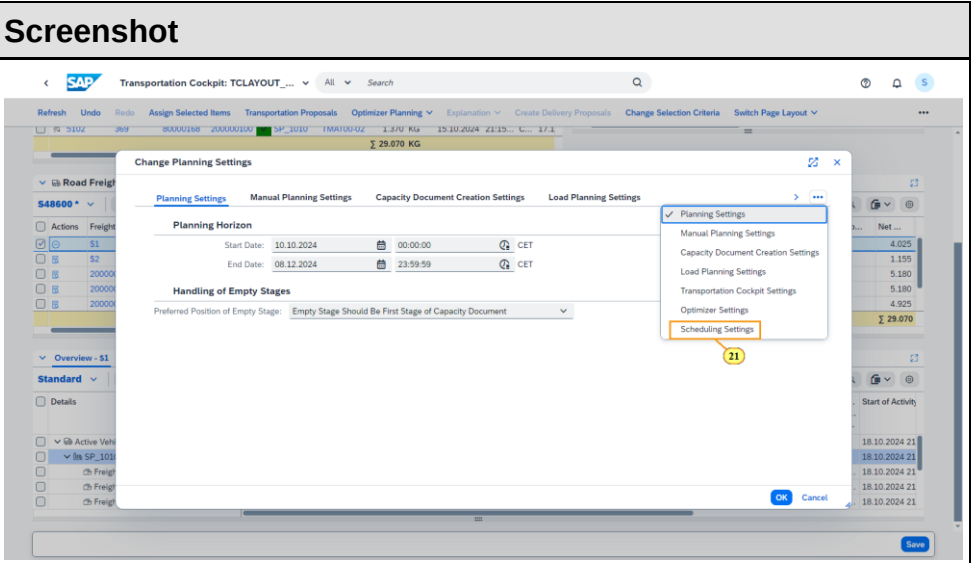

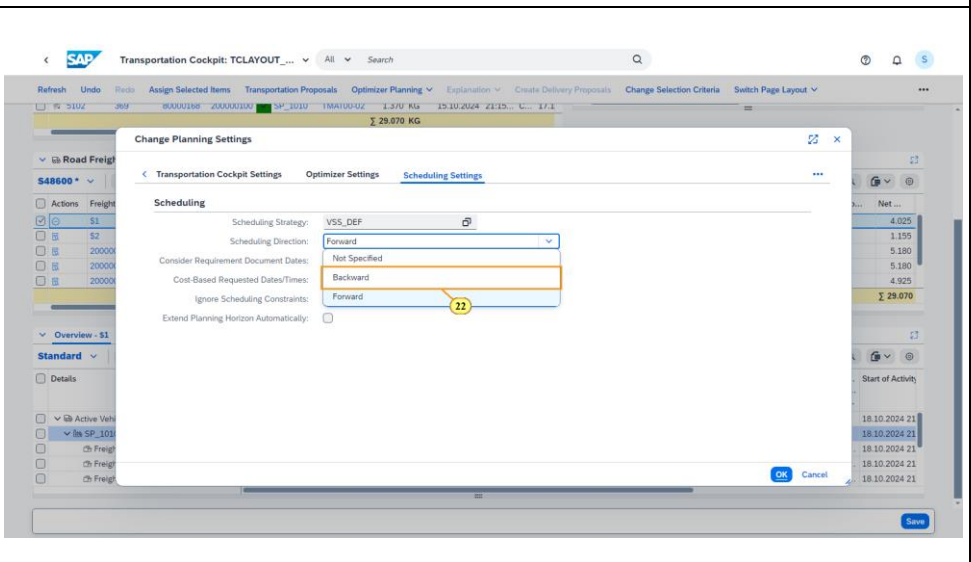

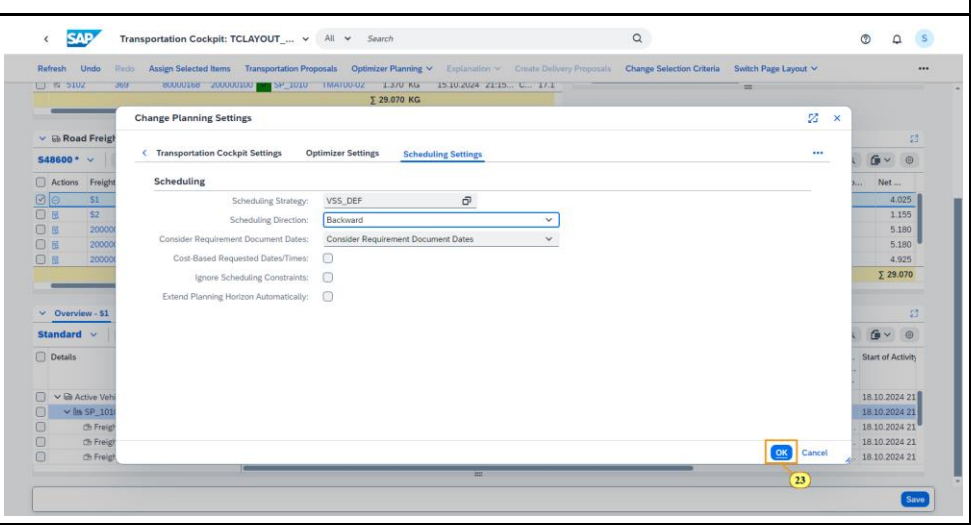

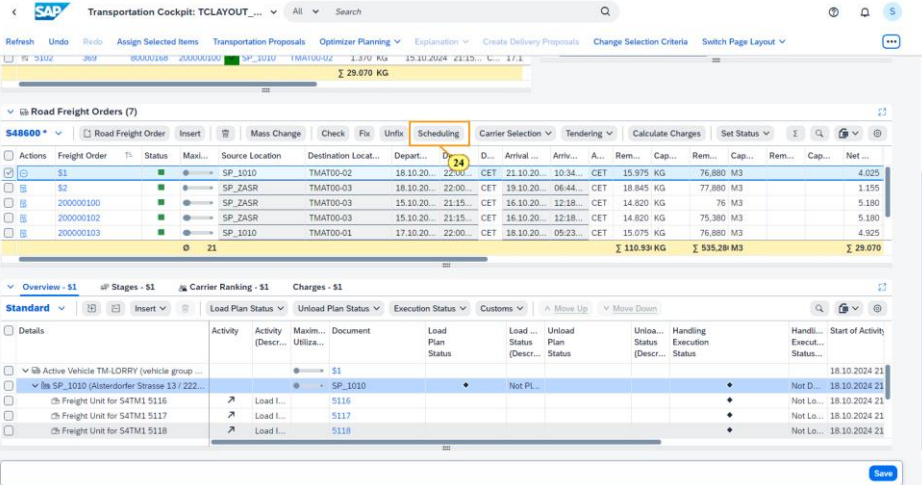

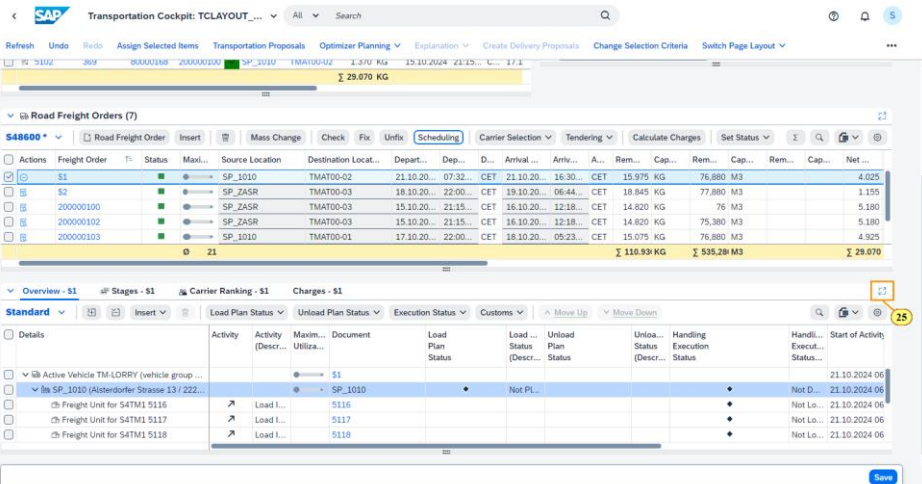

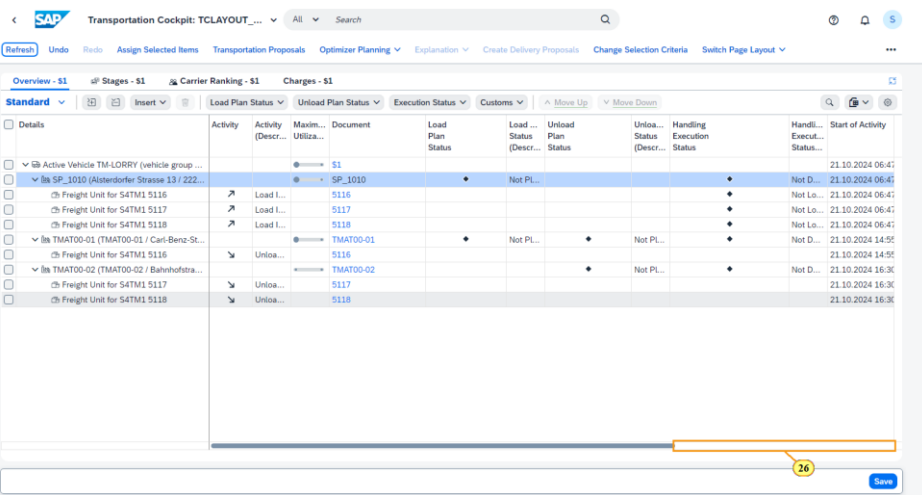

Explanation	Screenshot
10. Choose the column header for <i>Freight Order</i> to show additional options available for this table grid.	
11. Several options like filtering and sorting are offered. Choose <i>Sort Ascending</i> to sort the freight order list by the freight order number from the smallest to the largest.	
12. Review the object selections highlighted on the screen. Choose <i>Assign selected items</i> to add freight units 5117 and 5118 to the temporary freight order \$1 , which was already created before.	

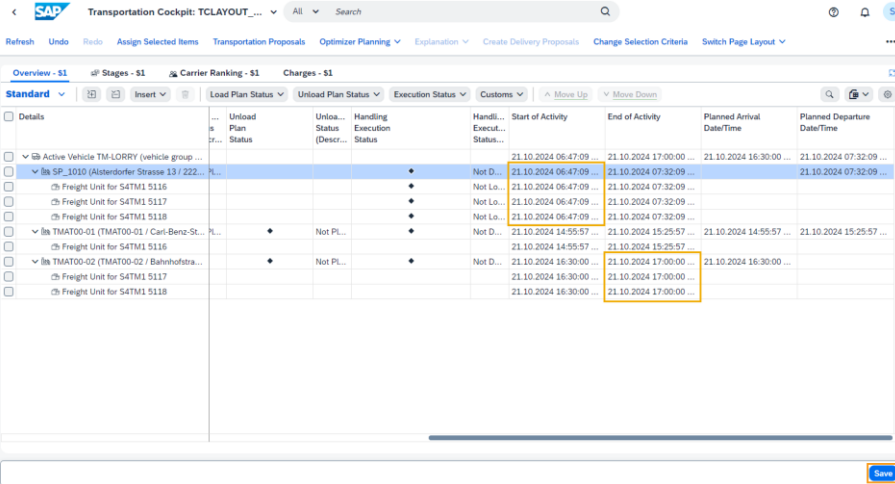

Explanation	Screenshot
13. The two freight units were assigned to the temporary freight order \$1. To continue, close the system message window.	
14. Choose in the area below the scroll bar to scroll down.	
15. To review the freight order details of order \$1, choose <i>Show Details</i> in the Actions column.	

Explanation	Screenshot
16. Choose <i>Maximize</i> to review the planning result for freight order \$1 in more detail.	
17. Choose <i>Expand all</i> to expand the freight order overview.	
18. In the freight order overview, you can check which vehicle is assigned to the freight order, which locations the freight order visits in sequence, and what is planned at each location (for example, loading or unloading freight units). Scroll to the right to see the planned dates and times.	

Explanation	Screenshot
19. You can identify the planned departure and arrival times for each location and the start and end of loading/unloading activities (Start of Activity, End of Activity). Note that the freight order is scheduled to begin on Friday afternoon (October 18, 2024) and to be delivered on Monday morning (October 21, 2024). You won't find this scheduling preferable. Choose „Minimize“ to return to the initial page layout again.	
20. When needed, you can change planning settings. To continue, choose <i>Change Planning Settings</i> from the dropdown menu.	

Explanation	Screenshot
21. You can change the planning settings here, a subset of the settings you have defined in the planning profile. Choose <i>Scheduling Settings</i> to continue.	
22. The freight order has been scheduled using forward scheduling, which means it will arrive as early as possible. You want to change that to backward scheduling. Choose <i>Backward</i> from the dropdown menu.	
23. To confirm the changes applied, choose OK.	

Explanation	Screenshot
24. To re-schedule the freight order \$1 with the backward planning direction, choose <i>Scheduling</i> .	 The screenshot shows the SAP Transportation Cockpit interface. The 'Scheduling' tab is highlighted in the top navigation bar. Below the navigation bar, there is a table of freight orders. The first order, labeled '\$1', is selected. The table columns include 'Freight Order', 'Status', 'Maxim.', 'Source Location', 'Destination Locat...', 'Depart...', 'D...', 'Arrival...', 'Arrh...', 'A...', 'Rem...', 'Cap...', 'Rem...', 'Cap...', and 'Net...'. The 'Scheduling' tab is also visible in the bottom navigation bar.
25. Choose <i>Maximize</i> to review the effect of rescheduling.	 The screenshot shows the SAP Transportation Cockpit interface. The 'Maximize' button is highlighted in the bottom navigation bar. The 'Scheduling' tab is still selected. The table of freight orders is visible, and the first order, labeled '\$1', is selected. The 'Maximize' button is located at the bottom right of the interface.
26. Scroll to the right to review the new dates and times.	 The screenshot shows the SAP Transportation Cockpit interface. The 'Maximize' button is highlighted in the bottom navigation bar. The 'Scheduling' tab is still selected. The table of freight orders is visible, and the first order, labeled '\$1', is selected. The right side of the table, showing dates and times, is visible. The 'Maximize' button is located at the bottom right of the interface.

Explanation	Screenshot
27. Review the new scheduling result. The freight order no longer extends over the weekend (starting Friday night and arriving Monday morning). Still, the complete freight order now fits on one day (starting Monday morning and arriving Monday afternoon). You are happy with the result of this new plan. To continue, choose Save.	
 Having returned to the overview screen for the freight order in the transportation cockpit concludes this demonstration.
