

Use Planning Profiles

Explanation	Screenshot
1. To explore planning profiles, choose the <i>Edit Planning Profile</i> app.	
2. To edit the planning profile PLAN_S48600 , choose <i>Continue</i> .	
3. In the planning profile, you can define the planning horizon. This example establishes the planning horizon as 60 days into the future. To scroll down, choose the area below the scroll bar .	

Explanation	Screenshot
4. The details of the planning profile are defined in separate profile assignments. Here, you can define everything relevant to your planning process, for example, the capacity selection settings, manual planning settings, and optimizer settings, To scroll up, choose the area above the scroll bar.	
5. To proceed, choose the <i>Capacity Selection Settings</i> tab.	

Explanation	Screenshot
6. In the capacity selection settings, you can define which vehicle resources, vehicle types, drivers, container resources, container types, and schedules are available to you in the planning process. To proceed, choose the <i>Manual Planning Settings</i> tab.	
7. With manual planning settings, you can define the system's behavior regarding planning activities. For example, the location extension strategy for capacity documents defines whether an additional location is to be inserted at the beginning or end of a tour or at a position where the distance is minimized. This option is selected here (Insert Location Where Distance Added to the Total is the Least). To proceed, choose the <i>Scheduling Settings</i> tab.
