

Create Deliveries

Explanation	Screenshot
1. Choose the <i>Create Deliveries – Delivery Builder app</i> .	
2. In the Create Deliveries app, you can define profile and layout sets to select your planning data, similar to what you learned in a previous lesson about the transportation cockpit. Choose <i>Start Creating Deliveries</i> to continue.	

Explanation	Screenshot
3. Select the check box for the freight order(s) you wish to create deliveries for.	
4. Choose <i>Create Delivery Proposals</i> to continue.	
5. Three delivery proposals have been created for the four freight units associated with your selected freight order(s). Two freight units have been combined into one delivery proposal since they share the same destination. Assuming, you are satisfied with this	

Explanation	Screenshot
proposal, choose <i>Create Deliveries</i> .	
6. Three deliveries have been created. Choose <i>Close</i> .	
7. Choose freight order 20000109 to open it.	
The document flow of the freight order shows which freight units have been combined into each delivery. Additionally, you may notice that an outbound delivery order has been created for one outbound delivery
