

Execute an Integrated Warehouse and Transportation Process

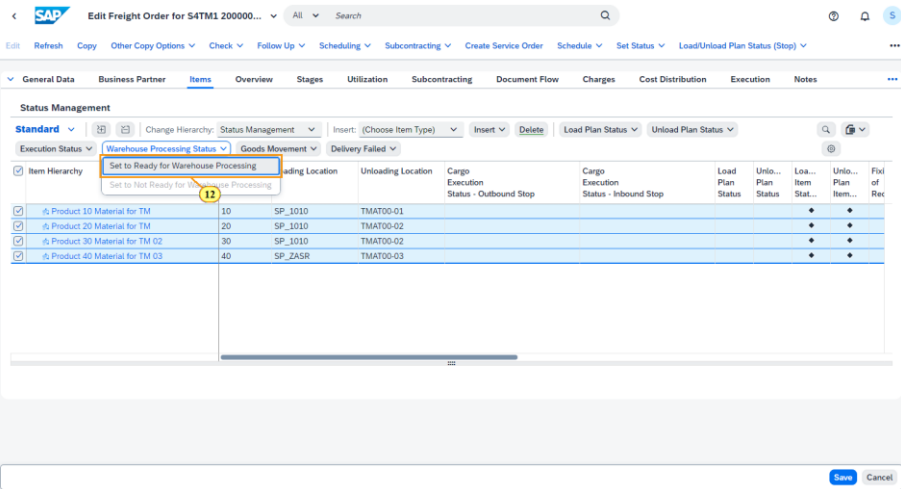

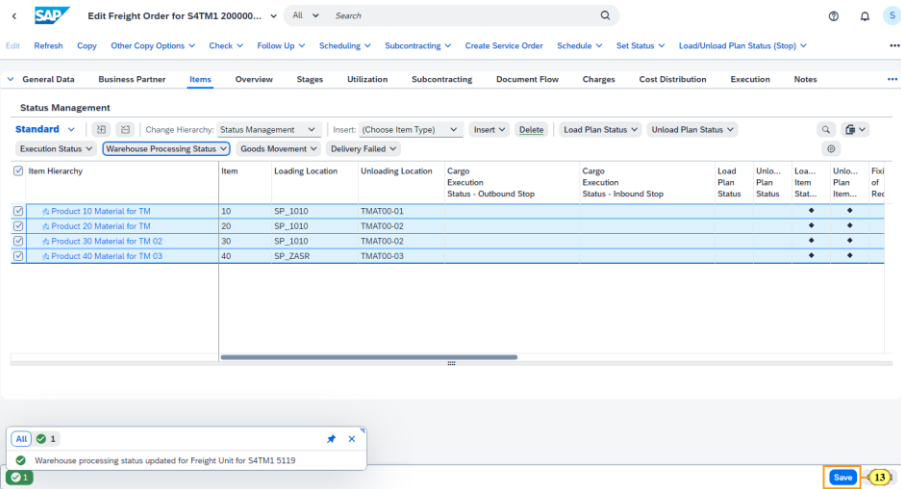

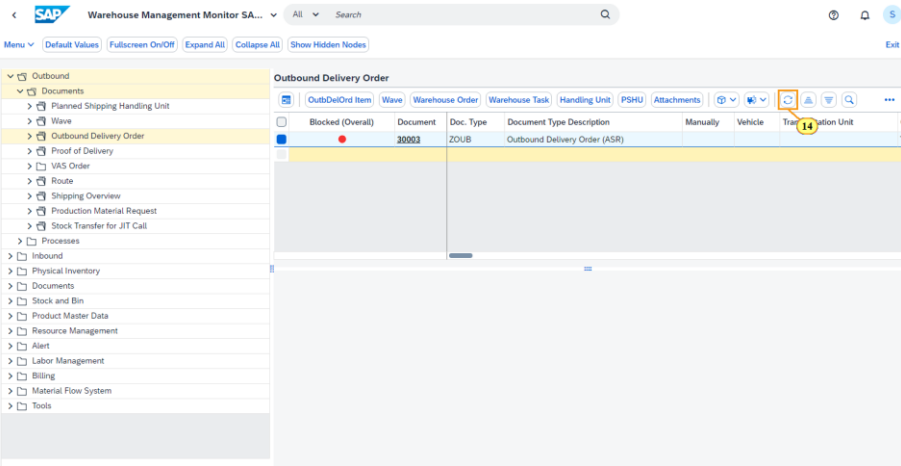

Explanation	Screenshot
1. Choose the <i>Freight Order – Worklist</i> app to open a worklist for freight orders.	
2. Choose freight order 20000109 to continue.	
 In the document flow, it is noted that a warehouse outbound delivery order 30003 has been created for freight unit 5119 in SAP Extended Warehouse Management. Choose <i>Next</i> to return to the home screen.	

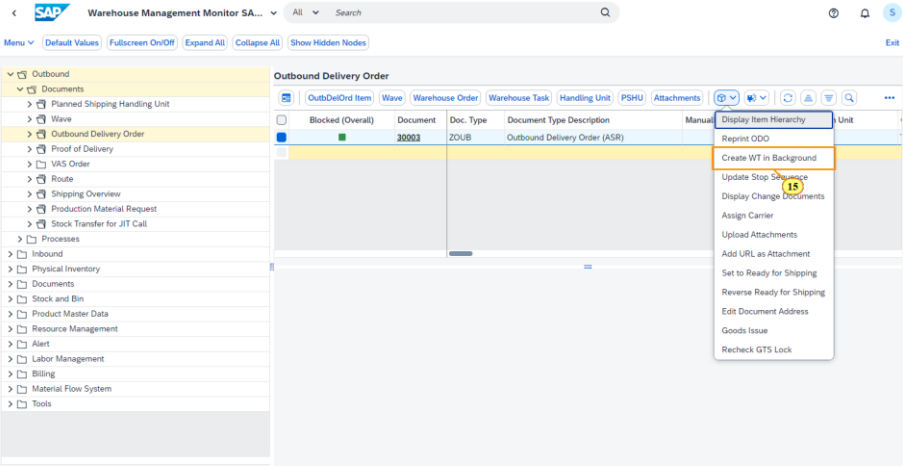

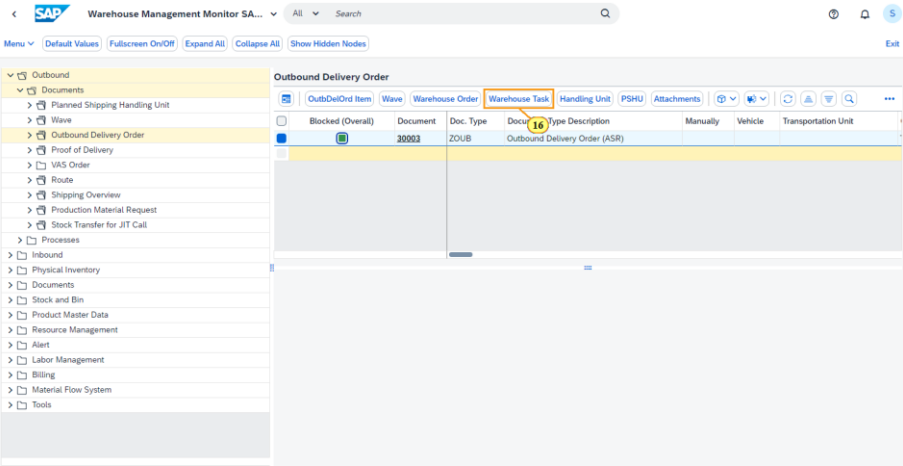

Explanation	Screenshot
3. Choose the <i>Warehouse Monitor</i> app to continue.	
4. For your convenience the warehouse number 1010 and warehouse monitor SAP have been prefilled. Choose <i>Execute</i> to continue.	
5. Choose <i>Outbound Delivery Order</i> to continue.	

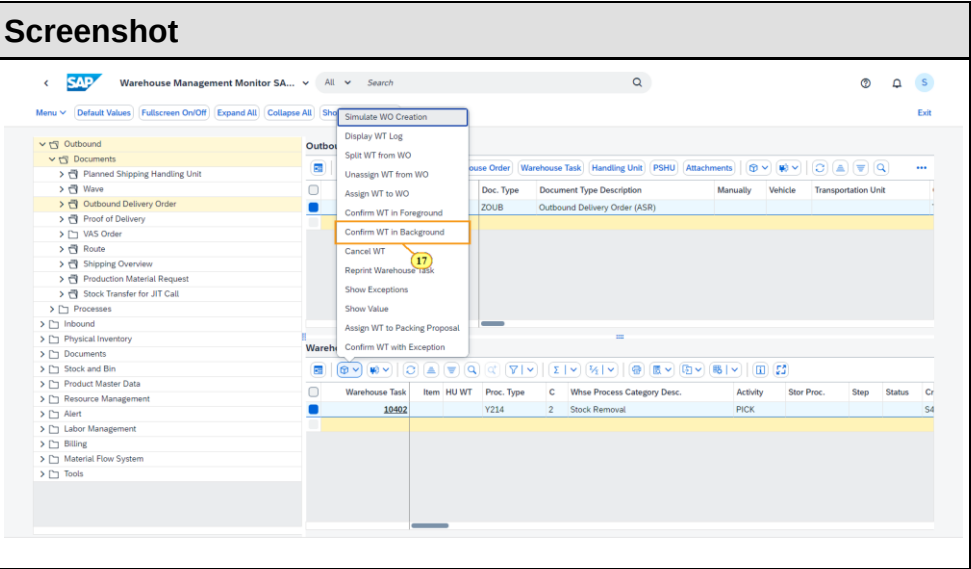

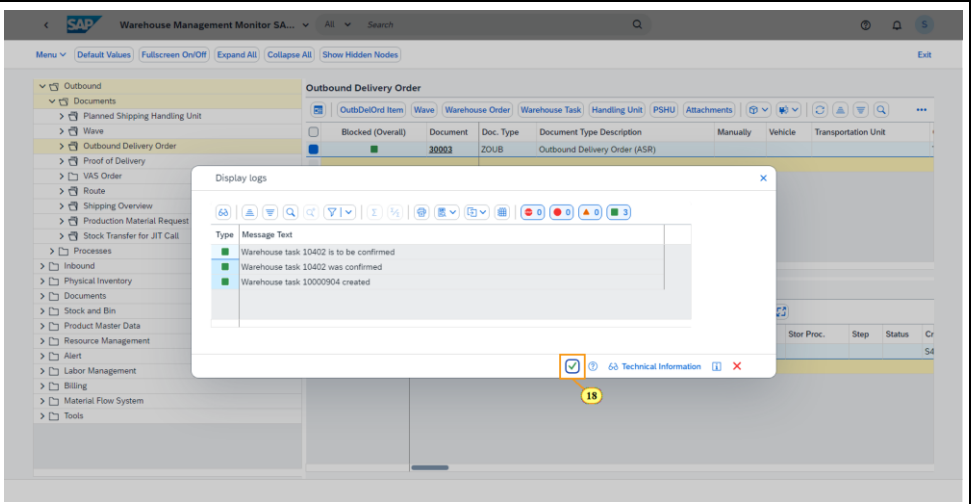

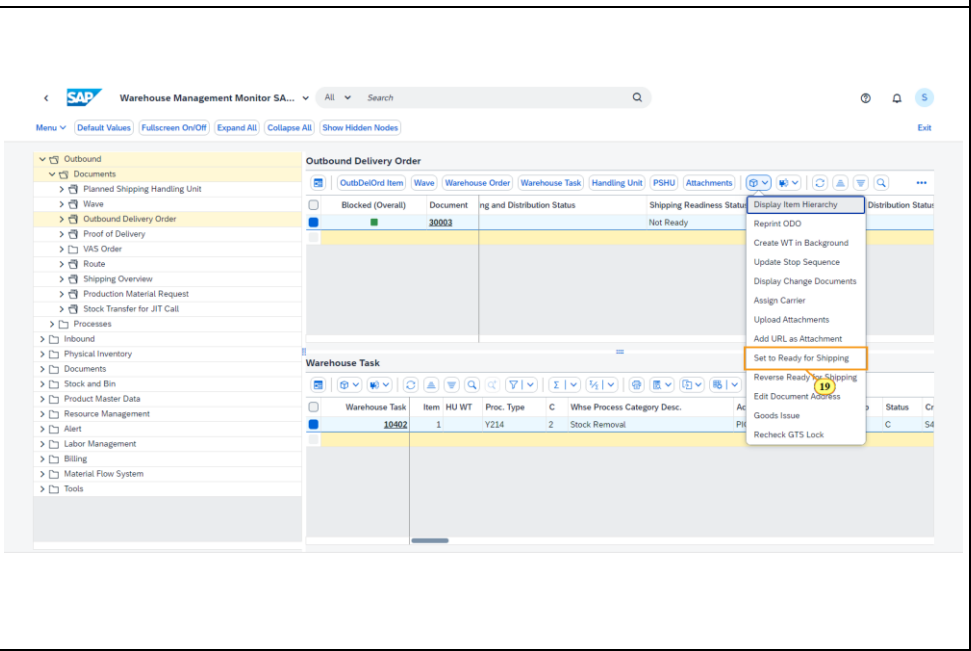

Explanation	Screenshot
6. In the pop-up window you have various options to select outbound delivery orders. The freight order number checked in a previous step was already entered for your convenience. Choose <i>Execute</i> to continue.	
 The outbound delivery order is currently blocked (indicated by a red light). In the integration between warehousing and transportation, one side must always lead the process. In this example, you have configured a "transportation-driven" process. As a result, the outbound delivery order remains blocked until the transportation team indicates that they are ready for warehouse processing.	

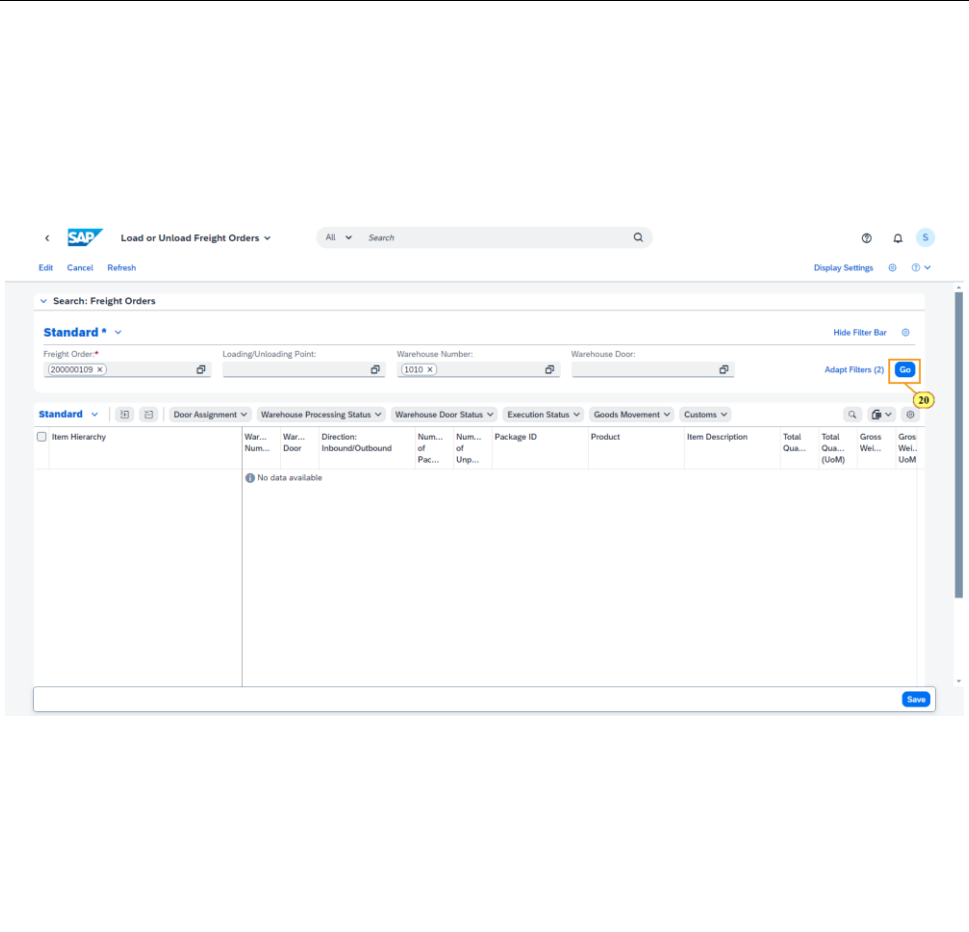

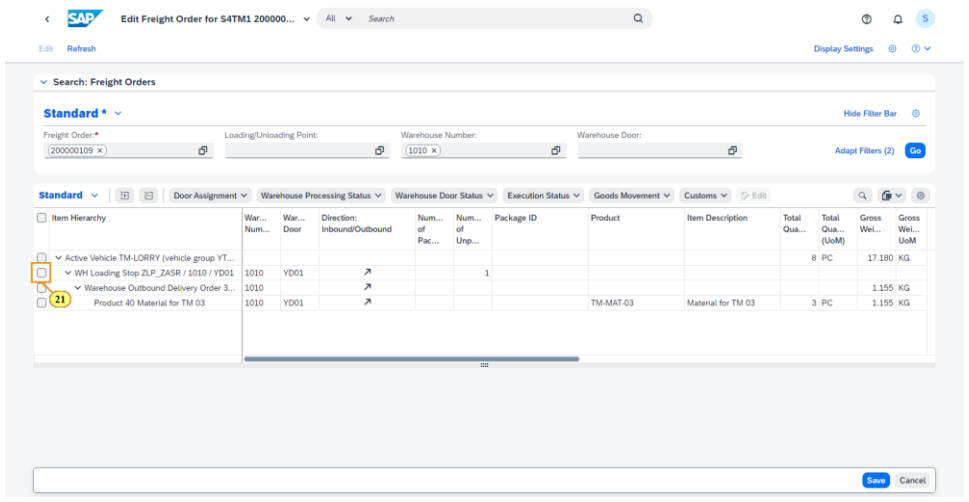

Explanation	Screenshot
Choose <i>Next</i> to return to your freight order.	
7. The freight order has been thoroughly planned and is ready for execution. Choose <i>Set to Ready for Transportation Execution</i> to indicate the same.	
8. Choose <i>Save</i> to continue.	

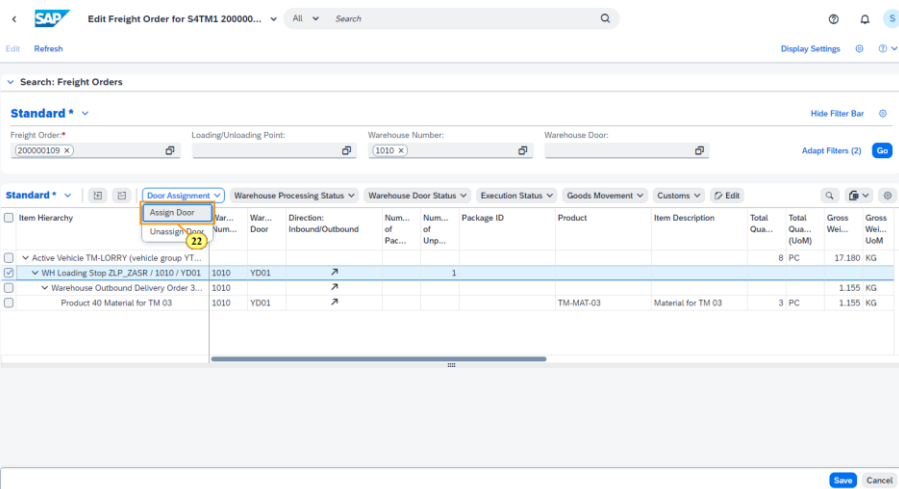

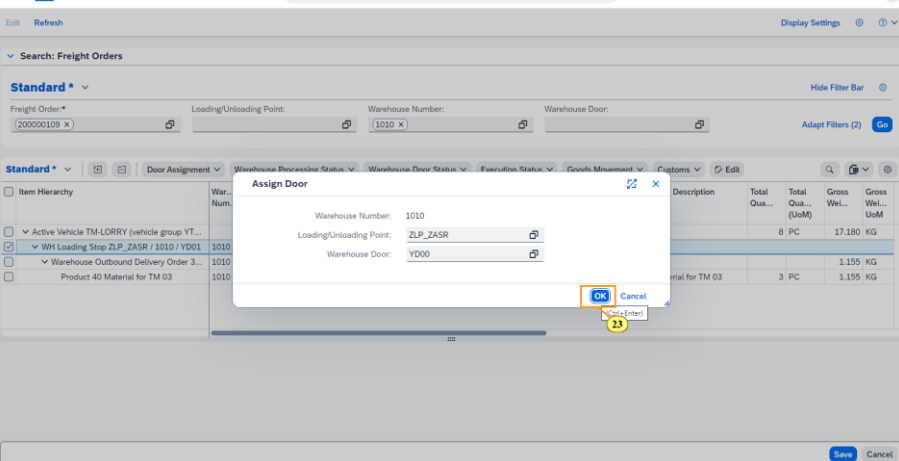

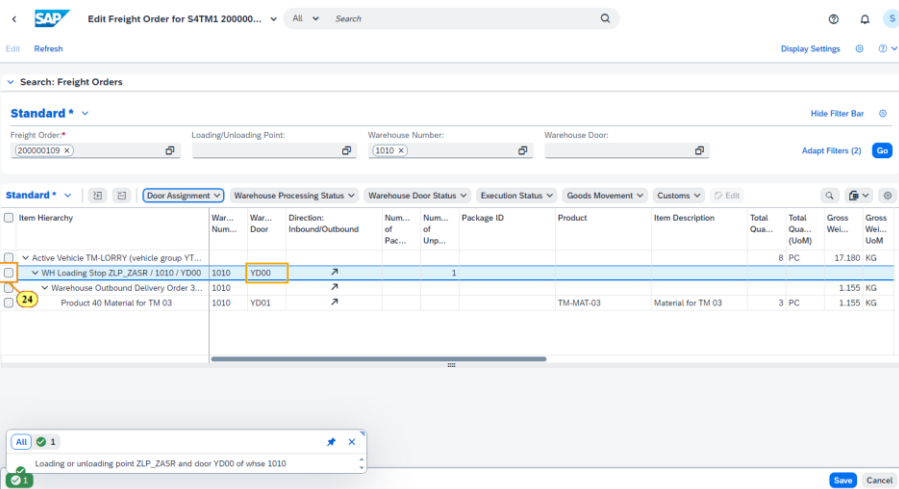

Explanation	Screenshot
9. Choose the <i>Items</i> tab to continue.	
10. Choose <i>Status Management</i> from the All Items dropdown menu to proceed.	
11. Choose the checkbox icon to select all items in the item hierarchy.	

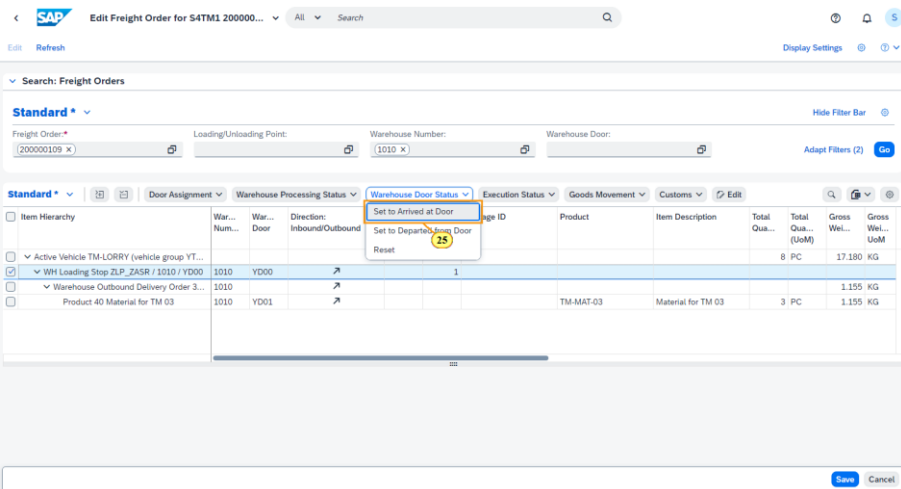

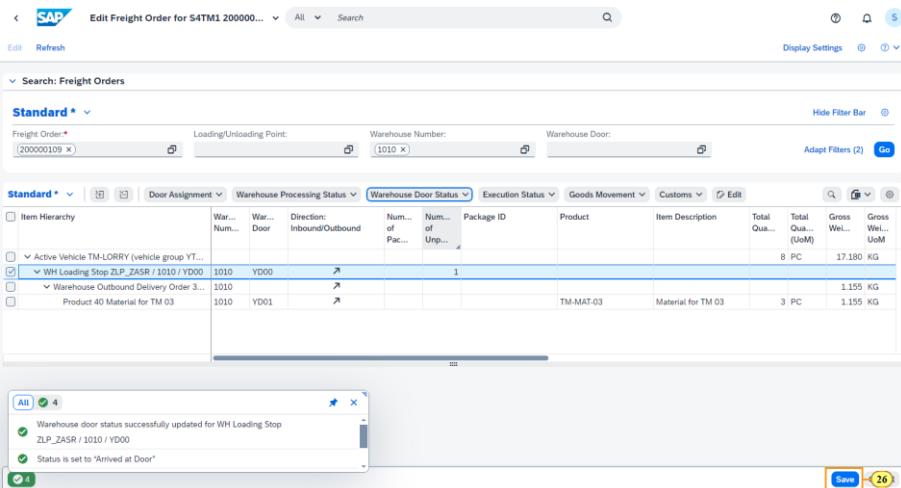

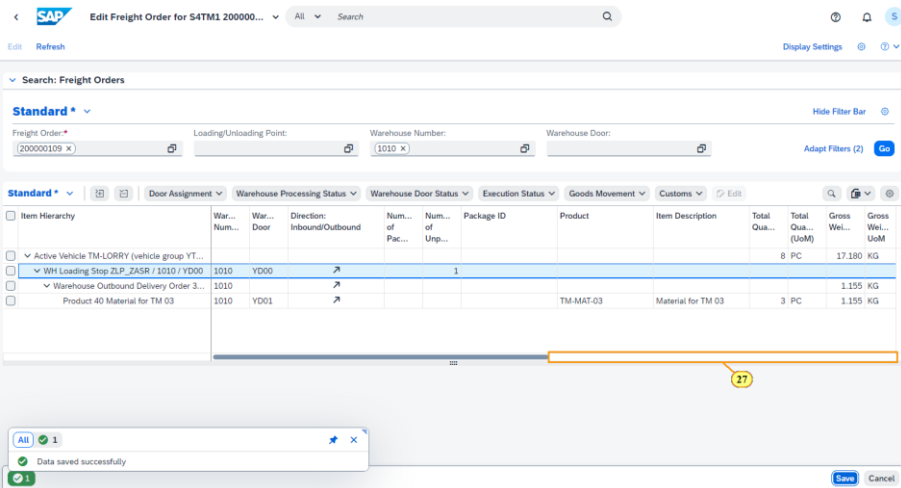

Explanation	Screenshot
12. Choose <i>Set to Ready for Warehouse Processing</i> from the Warehouse Processing Status dropdown menu to define that the freight order is ready for warehouse processing.	
13. Choose <i>Save</i> before returning to the warehouse monitor.	
14. Choose <i>Refresh</i> .	

Explanation	Screenshot
15. Upon refreshing the view in the warehouse monitor, the block has been removed, and the outbound delivery order is available for processing in the warehouse (green light). The first step in the warehouse process is the creation of warehouse tasks. Choose <i>Create WT in Background</i> to create warehouse task(s) for your outbound delivery order.	
16. Choose <i>Warehouse Task</i> to display the warehouse task(s).	 1 warehouse tasks created for 1 warehouse requests

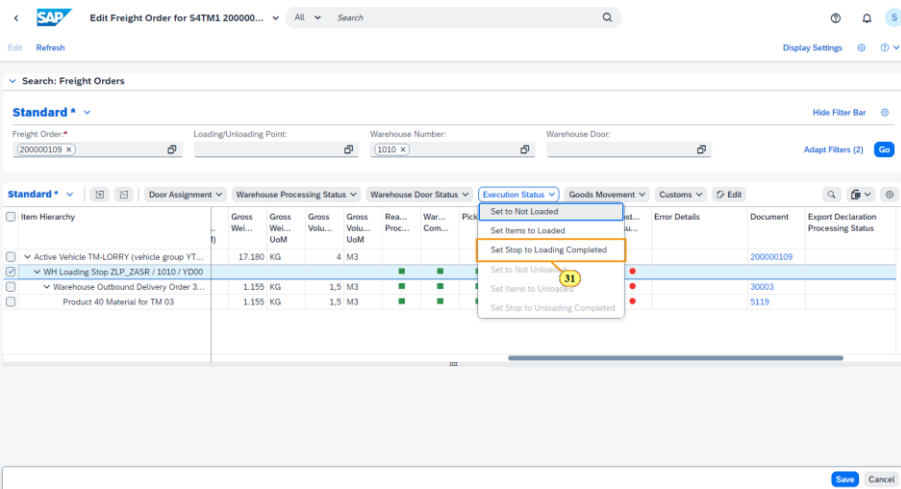

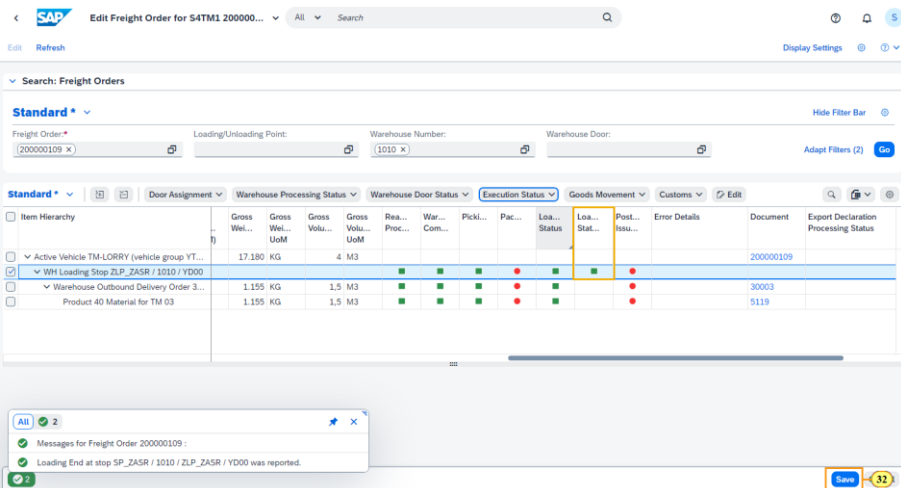

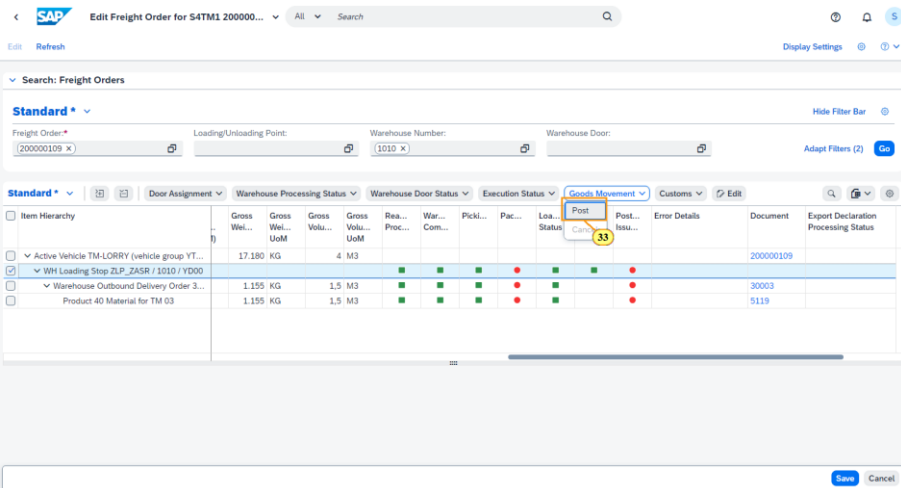

Explanation	Screenshot
17. Confirm the warehouse task by choosing <i>Confirm WT in Background</i> from the dropdown menu.	 The screenshot shows the SAP Warehouse Management Monitor interface. On the left, a navigation tree is expanded to 'Outbound Delivery Order'. In the center, a table lists warehouse tasks. A dropdown menu is open over the table, and the option 'Confirm WT in Background' is highlighted. A yellow circle with the number 17 is placed next to this option.
18. Choose <i>OK</i> to confirm the pop-up window.	 The screenshot shows the same SAP interface as before, but with a 'Display logs' pop-up window open in the foreground. The window contains a list of messages: 'Warehouse task 10402 is to be confirmed', 'Warehouse task 10402 was confirmed', and 'Warehouse task 10000904 created'. At the bottom of the window, there is a row of icons, including a checkmark icon, which is highlighted with a yellow circle and the number 18.
19. Once the warehouse task has been confirmed, the warehouse process is complete. Packing the material is an optional step, which is omitted in this simulation. Therefore, the warehouse process is finished. Choose <i>Set to Ready for Shipping</i> to indicate this.	 The screenshot shows the SAP Warehouse Management Monitor interface. The 'Outbound Delivery Order' table is visible. A dropdown menu is open over the table, and the option 'Set to Ready for Shipping' is highlighted. A yellow circle with the number 19 is placed next to this option.

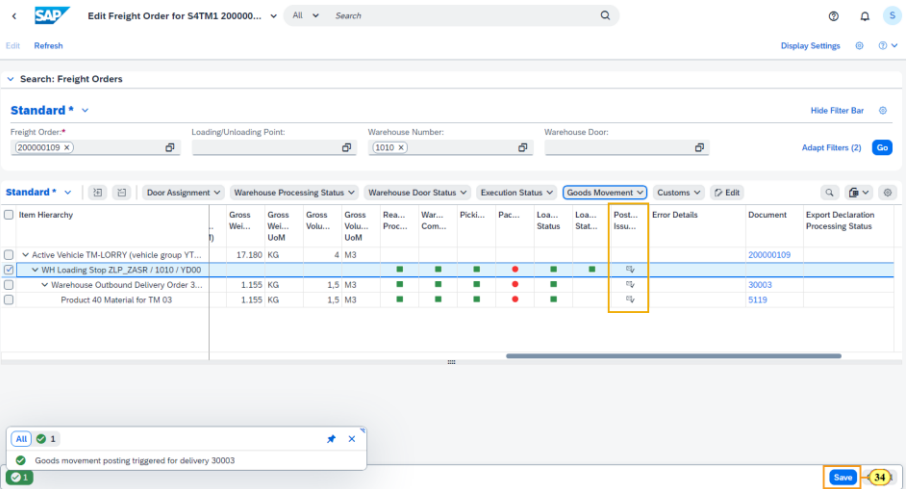

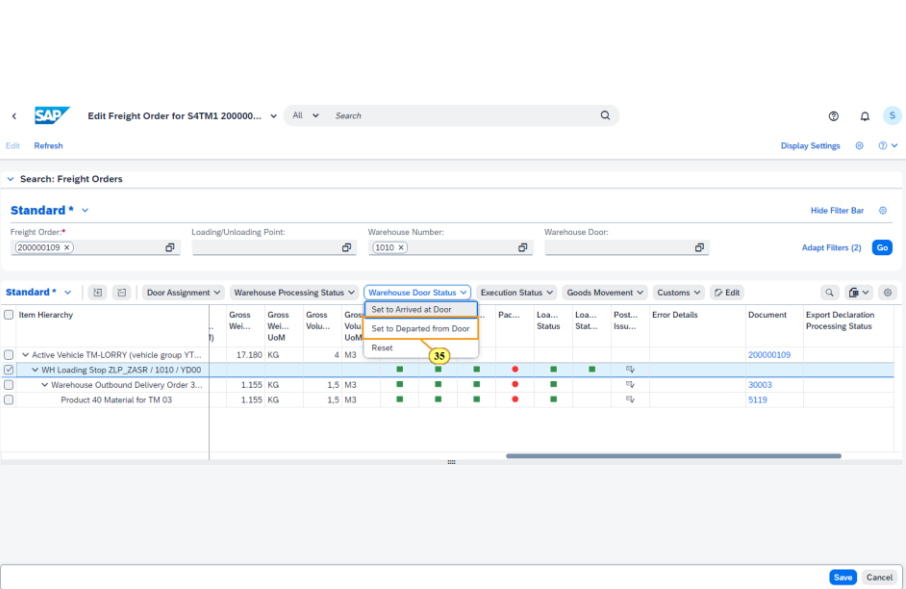

Explanation	Screenshot																																																
20. Note that this simulation continues in the Load or Unload Freight Orders app. This app manages the loading and unloading of freight orders for different warehouses. For your convenience, the freight order 200000109 and the warehouse number 1010 were already entered as filter criteria. Choose <i>Go</i> to continue.	 The screenshot shows the SAP 'Load or Unload Freight Orders' app interface. At the top, there's a search bar and navigation icons. Below, the 'Search: Freight Orders' section has filters for 'Freight Order' (200000109) and 'Warehouse Number' (1010). A 'Go' button is highlighted with a red box and a yellow callout bubble containing the number 20. Below the filters, there are tabs for 'Door Assignment', 'Warehouse Processing Status', 'Warehouse Door Status', 'Execution Status', 'Goods Movement', and 'Customs'. The 'Warehouse Processing Status' tab is selected, showing a table with columns: 'War... Num...', 'War... Door', 'Direction: Inbound/Outbound', 'Num... of Pac...', 'Num... of Unp...', 'Package ID', 'Product', 'Item Description', 'Total Qua...', 'Total Qua... (UoM)', 'Gross Wei...', and 'Gross Wei... UoM'. The table is currently empty with a message 'No data available'.																																																
21. Choose the warehouse loading stop of your freight order to proceed.	 The screenshot shows the SAP 'Edit Freight Order for S4TM1 200000...' app interface. The 'Freight Order' filter is set to '200000109'. The 'Go' button is highlighted with a red box and a yellow callout bubble containing the number 21. Below the filters, there are tabs for 'Door Assignment', 'Warehouse Processing Status', 'Warehouse Door Status', 'Execution Status', 'Goods Movement', and 'Customs'. The 'Warehouse Processing Status' tab is selected, showing a table with columns: 'War... Num...', 'War... Door', 'Direction: Inbound/Outbound', 'Num... of Pac...', 'Num... of Unp...', 'Package ID', 'Product', 'Item Description', 'Total Qua...', 'Total Qua... (UoM)', 'Gross Wei...', and 'Gross Wei... UoM'. The table contains three rows of data: <table><tr><th>War... Num...</th><th>War... Door</th><th>Direction: Inbound/Outbound</th><th>Num... of Pac...</th><th>Num... of Unp...</th><th>Package ID</th><th>Product</th><th>Item Description</th><th>Total Qua...</th><th>Total Qua... 1010	YD01	➔					TM-MAT-03	3	PC	1.155	KG																																						

Explanation	Screenshot
22. You must maintain the specific door in the warehouse designated for loading. To achieve this, assign a door to the warehouse stop. Select <i>Assign Door</i> from the Door Assignment dropdown menu.	
23. The loading point ZLP_ZASR and the warehouse door YD00 were already entered. Choose <i>OK</i> to continue.	
24. Choose the warehouse loading stop of your freight order again.	

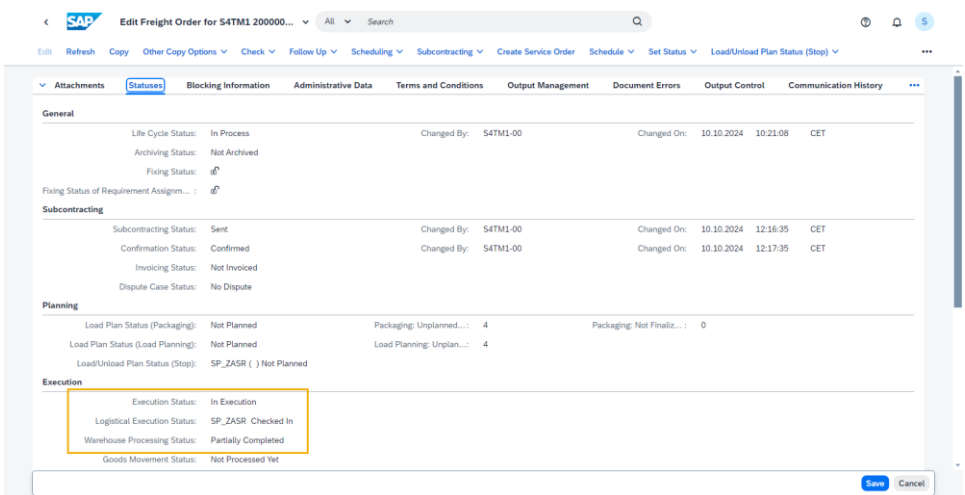

Explanation	Screenshot																																																							
25. Assume that the truck arrives at the door. Choose <i>Set to Arrived at Door</i> from the Warehouse Door Status dropdown menu to express this.	 The screenshot shows the SAP 'Edit Freight Order' screen for order 54TM1 200000. The 'Warehouse Door Status' dropdown menu is open, showing options: 'Set to Arrived at Door' (highlighted), 'Set to Departed from Door', and 'Reset'. The table below shows the current status of the freight order. <table><tr><th>Item Hierarchy</th><th>War... Num...</th><th>War... 26. Choose Save to proceed.	 The screenshot shows the same SAP 'Edit Freight Order' screen. A success message is displayed: 'Warehouse door status successfully updated for WH Loading Stop ZLP_ZASR / 1010 / YD00. Status is set to 'Arrived at Door''. The 'Save' button is highlighted.																																																							
27. Choose the <i>scroll bar</i> to move to the right to review the statuses.	 The screenshot shows the same SAP 'Edit Freight Order' screen. A scroll bar is highlighted at the bottom of the table, indicating the next step is to scroll to the right to review the statuses.																																																							

Explanation	Screenshot
28. Note that the load status is currently red. Choose the warehouse loading stop of your freight order again.	The screenshot shows the SAP 'Edit Freight Order' screen for order 54TM1 200000. The 'Execution Status' column for the selected item 'WH Loading Stop ZLP_ZASR / 1010 / YD00' is red. A yellow box highlights the 'Execution Status' column header and the red status cell. A message bar at the bottom indicates 'Data saved successfully'.
29. Assume that the material has been loaded onto the truck. Therefore, choose <i>Set Items to Loaded</i> to proceed.	The screenshot shows the same SAP screen with a dropdown menu open for the 'Execution Status' column. The option 'Set Items to Loaded' is highlighted. A yellow box highlights the dropdown menu and the 'Execution Status' column header. The message bar at the bottom now shows 'Loading End for Item for Product 40 Material for TM 03 at stop SP_ZASR was reported.'
30. Note that the load status for all items has changed to green, but the loading status for the loading stop is still red. Choose Save to proceed.	The screenshot shows the same SAP screen with all items now having a green status in the 'Execution Status' column. A yellow box highlights the green status cells. The message bar at the bottom shows 'Loading End for Item for Product 40 Material for TM 03 at stop SP_ZASR was reported.' and a 'Save' button is highlighted.

Explanation	Screenshot																																													
31. The warehouse loading stop of your freight order was selected again. Choose <i>Set Stop to Loading Completed</i> from the Execution Status dropdown menu to proceed.	 The screenshot shows the SAP 'Edit Freight Order for S4TM1 200000...' interface. The 'Execution Status' dropdown menu is open, and 'Set Stop to Loading Completed' is highlighted. The table below shows the status of various items. <table><tr><th>Item Hierarchy</th><th>Gross Weight</th><th>Gross Volume</th><th>Warehouse Processing Status</th><th>Warehouse Door Status</th><th>Execution Status</th><th>Goods Movement</th><th>Document</th><th>Export Declaration Processing Status</th></tr><tr><td>Active Vehicle TM-LORRY (vehicle group YT...)</td><td>17.180 KG</td><td>4 M3</td><td></td><td></td><td></td><td></td><td>200000109</td><td></td></tr><tr><td>WH Loading Stop ZLP_ZASR / 1010 / YD00</td><td>1.155 KG</td><td>1.5 M3</td><td></td><td></td><td></td><td></td><td>30003</td><td></td></tr><tr><td>Warehouse Outbound Delivery Order 3...</td><td>1.155 KG</td><td>1.5 M3</td><td></td><td></td><td></td><td></td><td>5119</td><td></td></tr><tr><td>Product 40 Material for TM 03</td><td></td><td></td><td></td><td></td><td></td><td></td><td></td><td></td></tr></table>	Item Hierarchy	Gross Weight	Gross Volume	Warehouse Processing Status	Warehouse Door Status	Execution Status	Goods Movement	Document	Export Declaration Processing Status	Active Vehicle TM-LORRY (vehicle group YT...)	17.180 KG	4 M3					200000109		WH Loading Stop ZLP_ZASR / 1010 / YD00	1.155 KG	1.5 M3					30003		Warehouse Outbound Delivery Order 3...	1.155 KG	1.5 M3					5119		Product 40 Material for TM 03

Explanation	Screenshot
34. Note that the Posting Status is not green yet, because this is an asynchronous process in the background. Choose Save to proceed.	
35. The warehouse loading stop of your freight order was selected again. Next, the departure of the truck from the door needs to be recorded. Choose <i>Set to Departed from Door</i> from the Warehouse Door Status dropdown menu.	

Explanation	Screenshot
36. Choose Save to proceed and to return to your freight order.	 The screenshot shows the SAP 'Edit Freight Order for S4TM1 200000...' screen. The 'Warehouse Door Status' tab is active, displaying a table with columns for Item Hierarchy, Gross Weight, Gross Volume, Warehouse Processing Status, Warehouse Door Status, Execution Status, Goods Movement, Customs, Error Details, Document, and Export Declaration Processing Status. A message at the bottom states: 'Warehouse door status successfully updated for WH Loading Stop ZLP_ZASR / 1010 / YD00'. A 'Save' button is highlighted in the bottom right corner.
37. Choose the Execution tab of the freight order.	 The screenshot shows the SAP 'Edit Freight Order for S4TM1 200000...' screen with the 'Execution' tab selected. The 'Status Management' section is visible, showing a table with columns for Item Hierarchy, Item, Loading Location, Unloading Location, Cargo Execution Status - Outbound Stop, and Cargo Execution Status - Inbound Stop. A 'Save' button is highlighted in the bottom right corner.
38. The Execution tab records events such as arrival, loading, and departure. These events are triggered by your activities in the Load or Unload Freight Orders app. Choose the Statuses tab to proceed.	 The screenshot shows the SAP 'Edit Freight Order for S4TM1 200000...' screen with the 'Statuses' tab selected. The 'Execution' section is visible, showing a table with columns for Statuses, Event, Planned Date, Actual Event Time, Actual Time, Time Zone, Location, Description, Loading/Unloading Details, and Item Details. A message at the bottom states: 'Arrival at Door'. A 'Save' button is highlighted in the bottom right corner.

Explanation	Screenshot
 On the Statuses tab, you can view the current execution statuses of your freight order. As execution has started, the freight order is labeled "In Execution." The order has departed from the loading point (ZLP_ZASR) of the shipping point (SP_ZASR), but it has not yet been checked out from the shipping point. Warehouse processing is only partially completed, as the warehouse activities at the first loading stop have been finished. Additional activities are expected to occur at the second loading stop, located at a different warehouse or shipping point. This will conclude this simulation.	 The screenshot displays the SAP 'Edit Freight Order' interface for order S4TM1 200000. The 'Statuses' tab is active, showing a detailed overview of the order's execution. The 'Execution' section at the bottom is highlighted with a yellow box, indicating the current state of the freight order. The status is 'In Execution', with 'Logistical Execution Status' set to 'SP_ZASR Checked In' and 'Warehouse Processing Status' at 'Partially Completed'. The 'Goods Movement Status' is 'Not Processed Yet'.
