

Trigger a Planning-related Delivery Split

| Explanation                                                                                                                                                                                                              | Screenshot                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| <p>1. For your convenience, freight units 5122 and 5123 have already been selected from the list of eight existing freight units.</p> <p>Choose <i>Transportation Cockpit</i> to start planning these freight units.</p> |    |
| <p>2. Choose <i>Continue</i> to open the transportation cockpit with the selected profile and layout set.</p>                                                                                                            |   |
| <p>3. Both freight units and the truck type <b>TM-LORRY</b> have been selected.</p> <p>Choose <i>Assign Selected Items</i> to create a freight order based on the selected objects.</p>                                  |  |

| Explanation                                                                                                                                                                                                        | Screenshot                                                                           |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|
| 4. Choose Save to save the newly created freight order with the temporary order number \$1.                                                                                                                        |    |
| 5. Note that the column <b>Original Delivery</b> in the freight unit stages area of the screen is still empty.<br><br>Choose <i>Create Delivery Proposals</i> to create delivery proposals for your freight order. |   |
| 6. Because both freight units are from the same source and for the same destination, one delivery proposal has been created.<br><br>Select the <i>radio button</i> for the delivery proposal to proceed.           |  |

| Explanation                                                                                                                                                                                                                                       | Screenshot                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| <p>7. After selecting the delivery proposal, you can review its details.</p> <p>You will see that both of your freight units (5122 and 5123) have been assigned to this delivery proposal.</p> <p>Choose <i>Create Deliveries</i> to proceed.</p> |  <p>The screenshot shows the SAP 'Create Deliveries Delivery Proposal' screen. The 'Delivery Proposals' table has one entry with ID 1, Freight Unit 200000111, Source Location SP_1010, City (Source) Hamburg, Loading Date 18.10.2024, Loadin... 21:15:00, Delivery Date 19.10.2024, Deliver... 05:23:48, Freight Or... 200000111, Destination Lo... TMA00-01, City (Destinat... Mannheim, Shipper TMA00-01, Ship-to Party TMA00-01, and Pland Gds Mmnt... 18.10.2024. The 'Delivery Proposal Details' table shows two freight units: 5122 and 5123, both with Quantity 10, Item Description 'Material for ...', and Material Availability Date 17.10.2024. The 'Create Deliveries' button is highlighted with a yellow box.</p> |
| <p>8. Delivery <b>800000177</b> has been created.</p> <p>Close the <i>message box</i> to continue.</p>                                                                                                                                            |  <p>The screenshot shows the same SAP 'Create Deliveries Delivery Proposal' screen, but now a message box is displayed at the bottom. The message box contains the text 'Delivery 800000177 was created for FU(s) on planned FO 200000111'. The 'Create Deliveries' button is highlighted with a yellow box.</p>                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <p>9. Note that no more delivery proposals will be visible once a delivery has been created.</p> <p>Choose <i>Back</i> to return to the transportation cockpit.</p>                                                                               |  <p>The screenshot shows the same SAP 'Create Deliveries Delivery Proposal' screen, but now the 'Back' button is highlighted with a yellow box. The 'Create Deliveries' button is also highlighted with a yellow box.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Explanation

10. Note that the **Original Delivery** column is filled with delivery number **80000177** for both freight units.

De-select freight unit 5123 by choosing the *corresponding box*.

11. It has been noted that freight unit 5122 cannot be accommodated on the initially planned freight order.

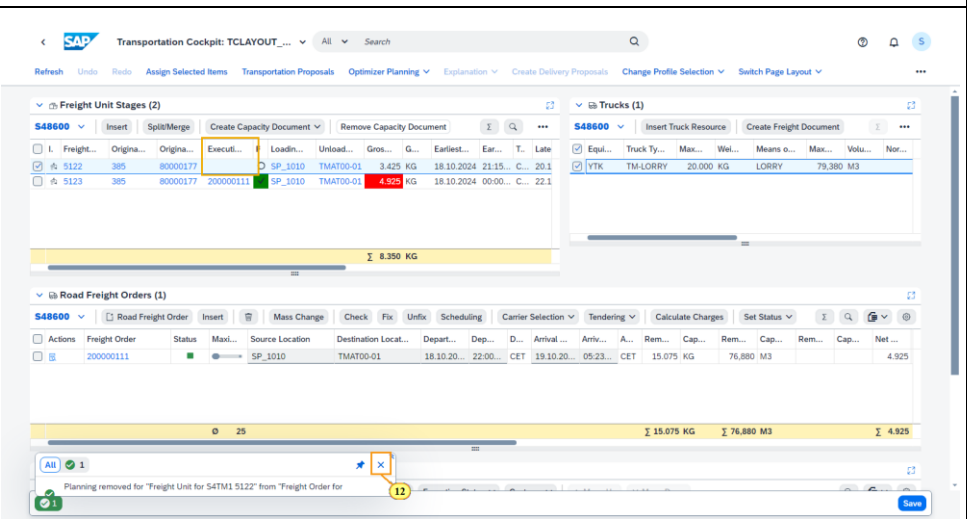

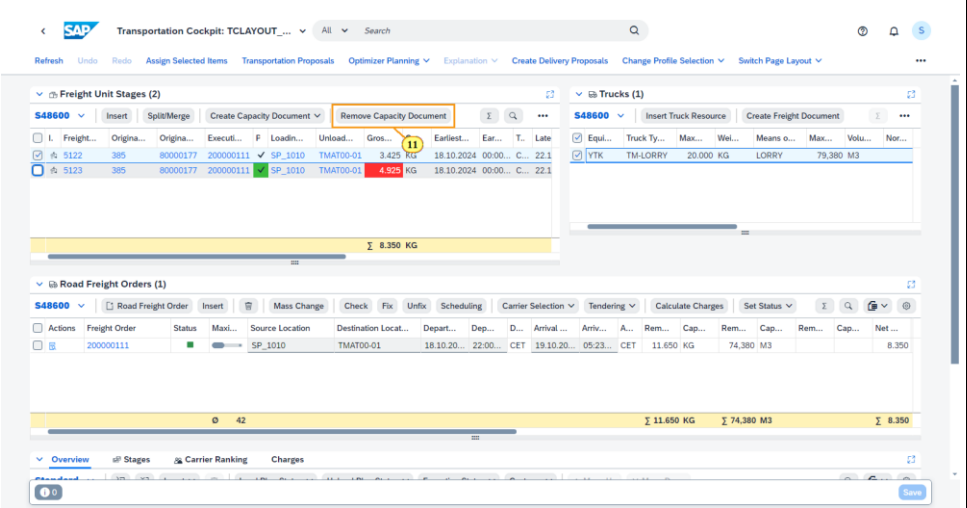

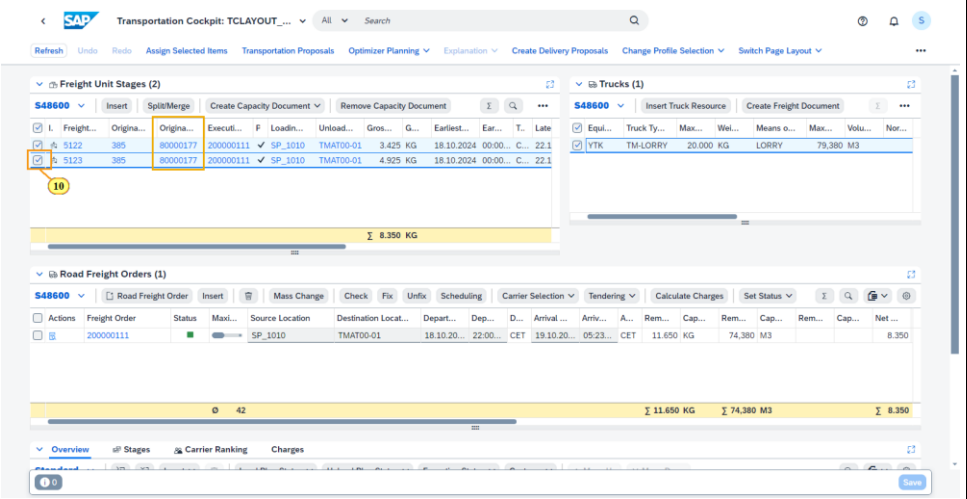

Choose *Remove Capacity Document* to unassign the freight unit from the freight order.

12. Freight unit 5122 has been removed from the freight order.

Note the notification and the blank space in the **Execution Document** column for the freight unit.

Close the *message box* to continue.

Screenshot

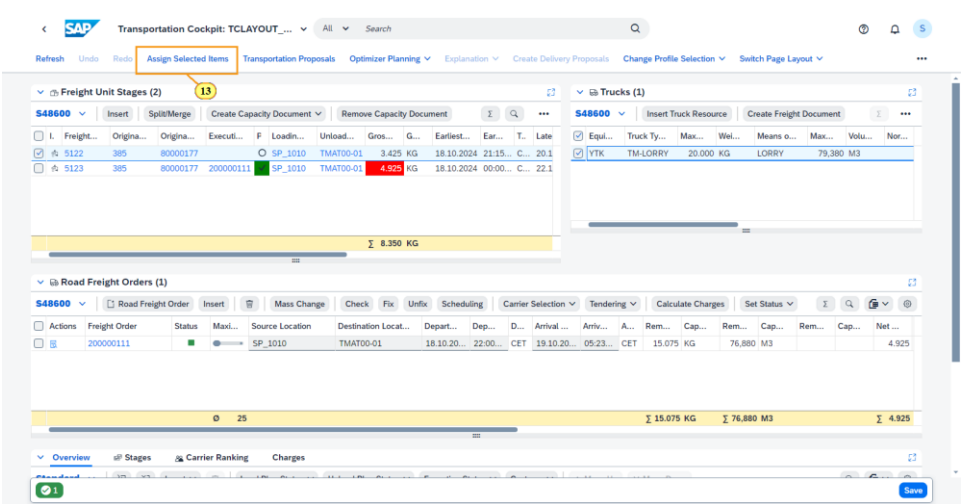

Explanation

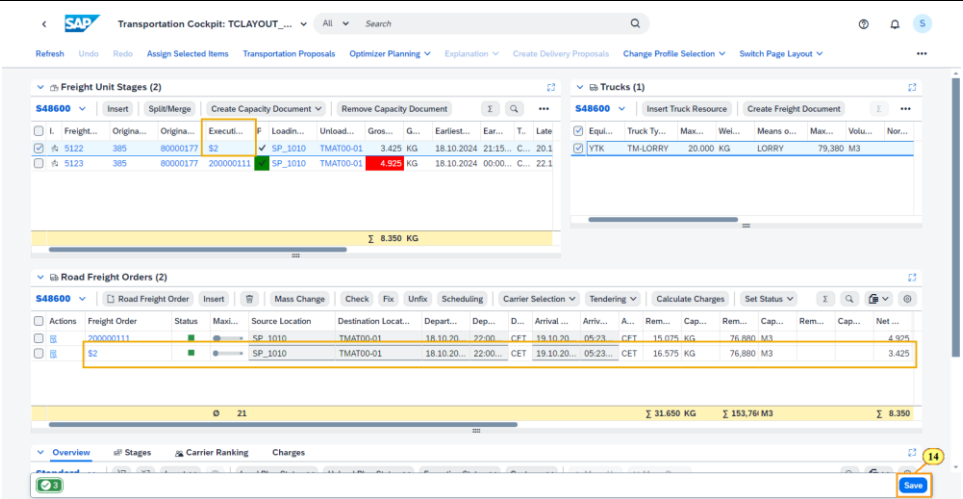

13. Create a new freight order for freight unit **5122** and truck type **TM-LORRY** based on the selection already applied.

Choose *Assign Selected Items* to create a new freight order.

Screenshot

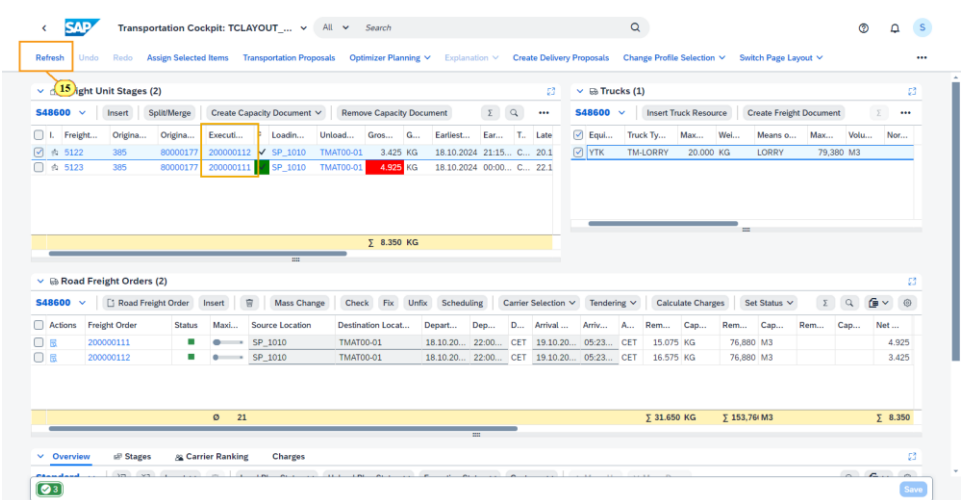

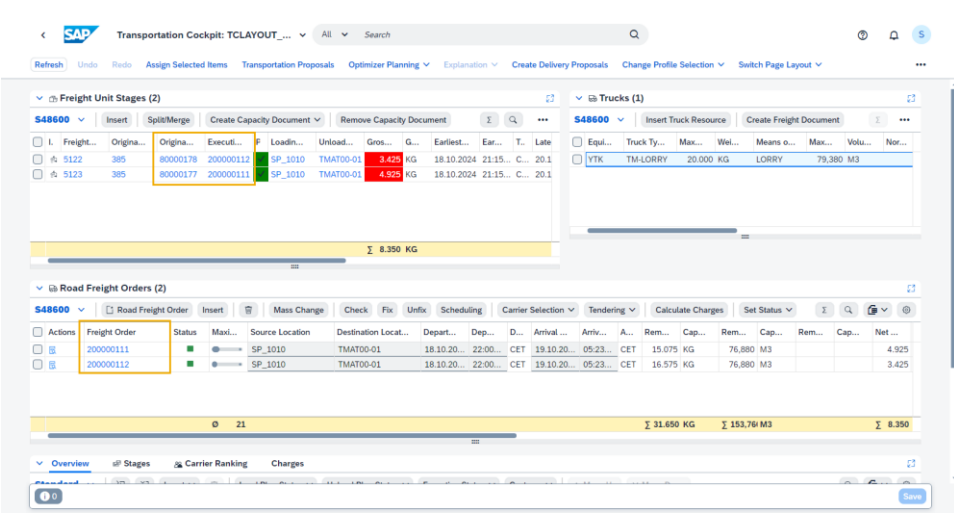

14. Choose *Save* to save the newly created freight order with the temporary order number **\$2**.

15. Note that both freight units are planned for different freight orders (Column **Execution Document**). This is an inconsistent situation. One delivery cannot be delivered with two different freight orders.

However, the system has automatically recognized this

| Explanation                                                                                                                                                                                                   | Screenshot                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |

| <div><div></div><div>The system has automatically split the original delivery, so there are now two deliveries, one for each freight order/freight unit.<br/><br/>This concludes this simulation.</div></div> |  <p>The screenshot displays the SAP Transportation Cockpit interface. The top navigation bar includes the SAP logo and various menu items like 'Refresh', 'Undo', 'Redo', 'Assign Selected Items', 'Transportation Proposals', 'Optimizer Planning', 'Explanation', 'Create Delivery Proposals', 'Change Profile Selection', and 'Switch Page Layout'. The main content area is divided into several sections:</p> <ul style="list-style-type: none"><li><b>Freight Unit Stages (2):</b> A table showing freight unit details. The first section lists two freight units (5122 and 5123) with their origins, execution dates, and status. The second section shows the split results, with two new freight units (80000178 and 80000177) created from the original units. The third section shows the total weight of the split units as 8.350 KG.</li><li><b>Trucks (1):</b> A table showing truck resources. The first section lists one truck (YTK) with its type (TM-LORRY), weight (20,000 KG), and volume (79,380 M3). The second section shows the total weight of the trucks as 21.</li><li><b>Road Freight Orders (2):</b> A table showing road freight order details. The first section lists two road freight orders (200000111 and 200000112) with their status, source location, destination location, and departure/arrival dates. The second section shows the total weight of the road freight orders as 31.450 KG and 153.760 M3, with a total net weight of 8.350.</li></ul> <p>The bottom of the interface shows a navigation bar with 'Overview', 'Stages', 'Carrier Ranking', and 'Charges' tabs. A 'Save' button is visible in the bottom right corner.</p> |
