

End-to-End Process Demonstration of Basic Transportation Management

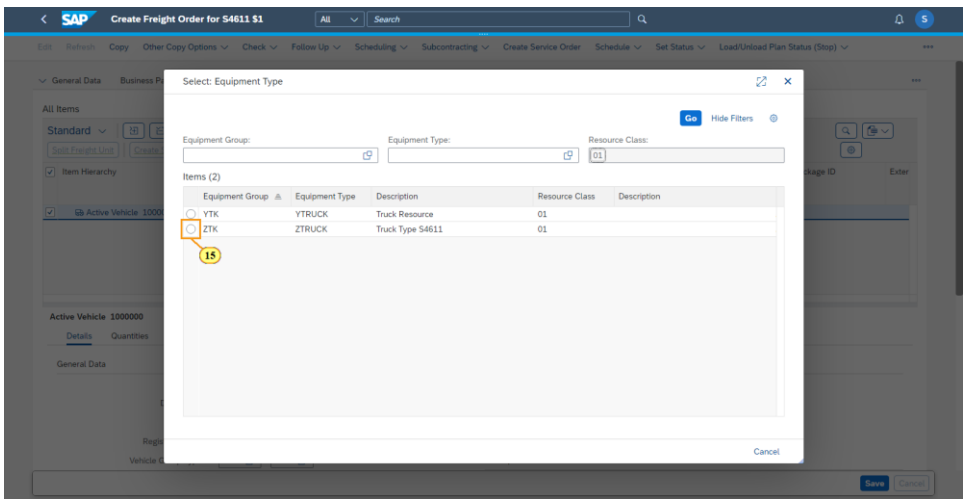

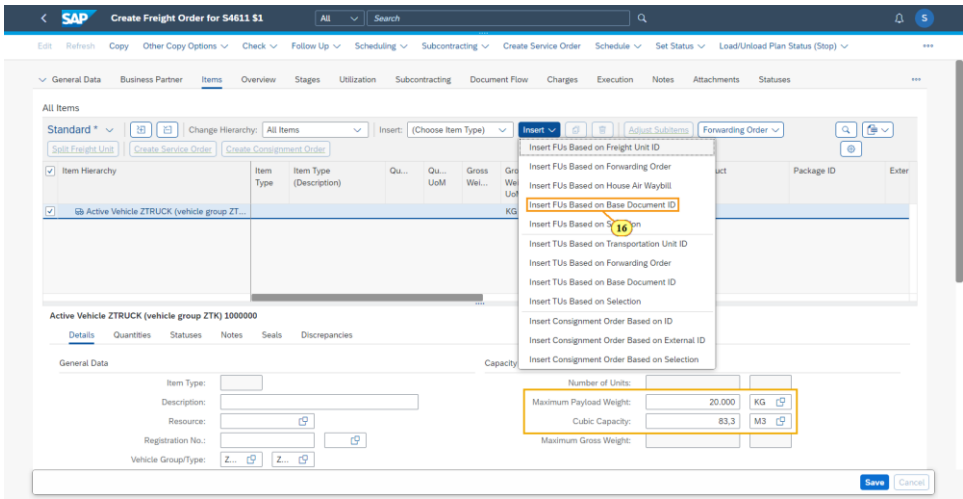

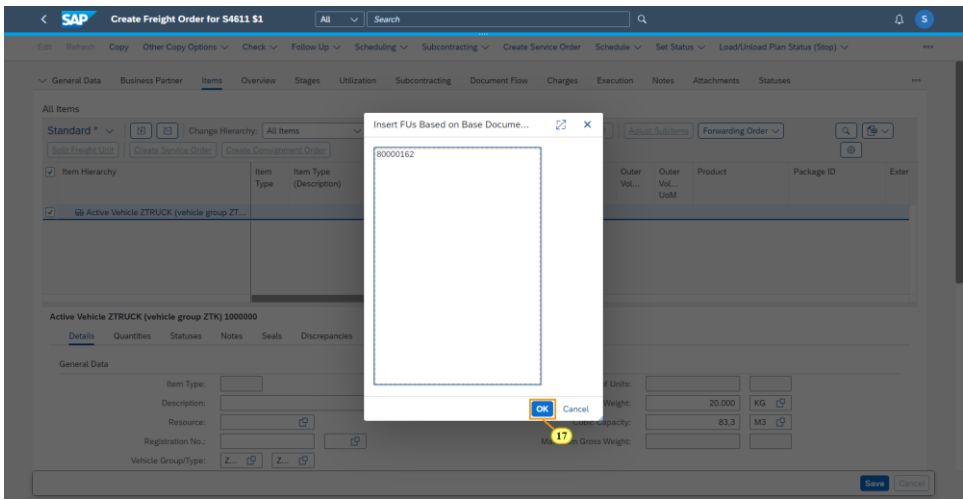

Explanation	Screenshot								
The purpose of this demonstration is to provide an overview about the end-to-end transportation process with basic transportation management. Choose <i>Next</i> to continue.									
1. Choose Create Sales Orders - VA01 to create a sales order.									
2. Sales orders are created based on a specific order type and with reference to organizational units. Choose <i>Continue</i> to be able to enter the details of a sales order.	 <table><tr><th>Dv</th><th>SOrg</th><th>DCh</th><th>Name</th></tr><tr><td>00</td><td>1010</td><td>10</td><td>Cross Division</td></tr></table> Continue 2 with Reference	Dv	SOrg	DCh	Name	00	1010	10	Cross Division
Dv	SOrg	DCh	Name						
00	1010	10	Cross Division						

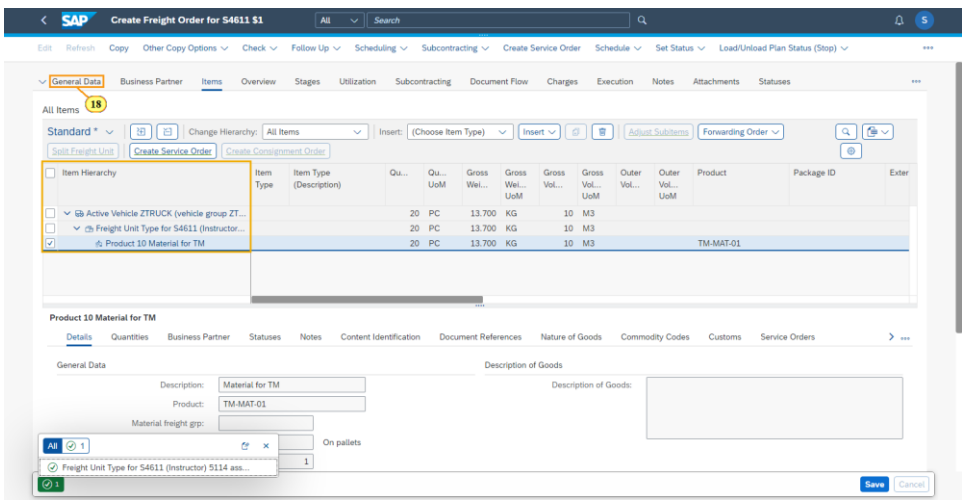

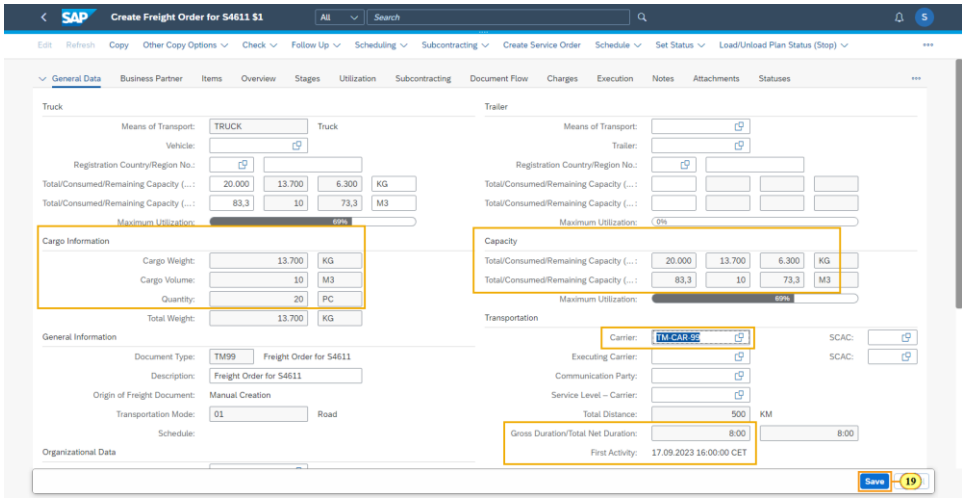

Explanation	Screenshot
3. Key information that needs to be maintained in a sales order are the ordering party (sold-to and ship-to), the requested delivery date and the material (type and quantity) to be sold. Once this information has been entered, the sales order can be saved. Choose Save.	
4. To Display details related to the sales order 376, that has just been created, choose <i>Display</i>.	
5. In this case, sales order 376 is NOT transportation relevant. Therefore, no TM Status information is available, which could be displayed by choosing the TM Status tab (if it was transportation relevant). Choose SAP to return to your home	

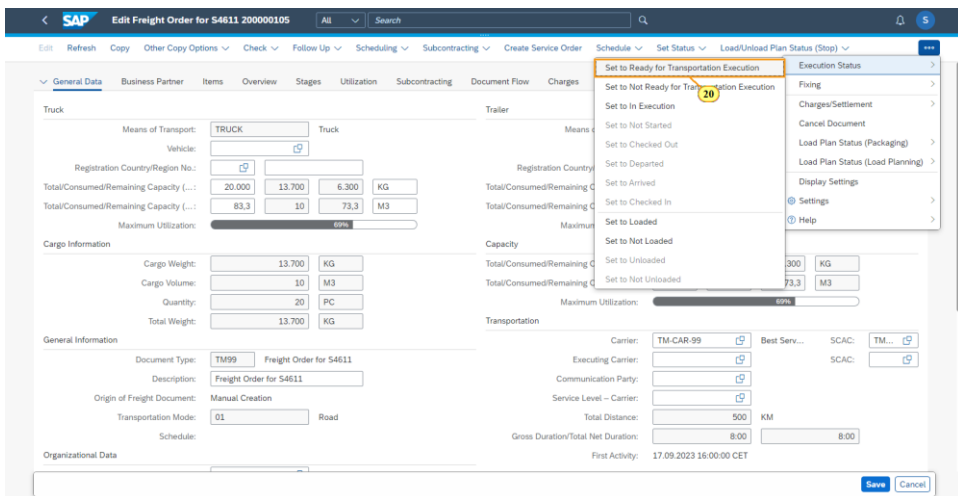

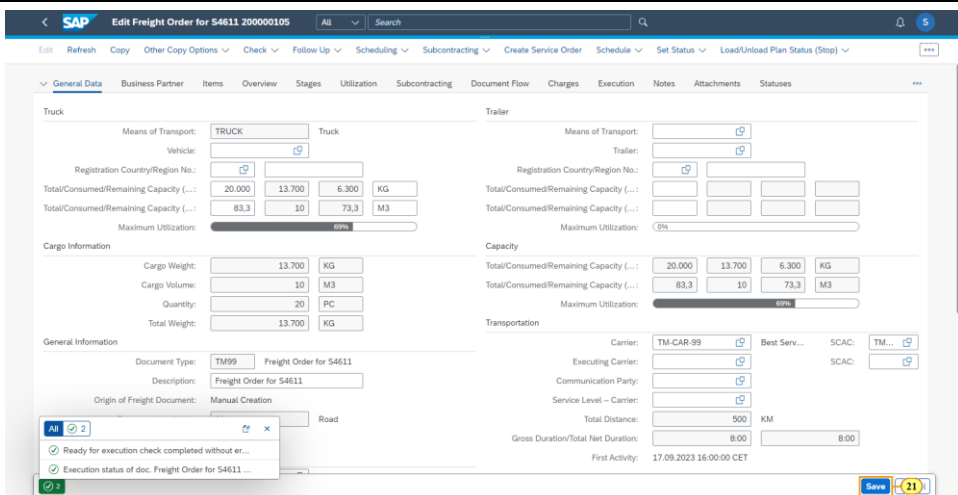

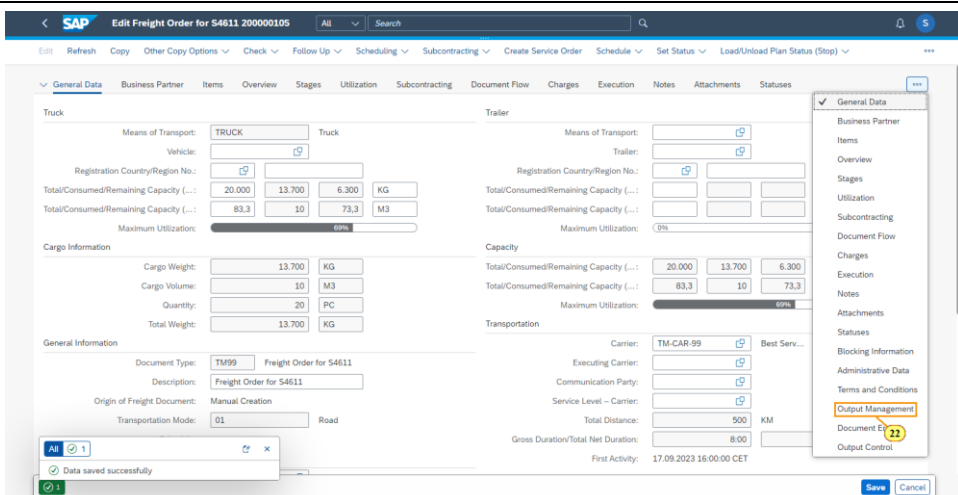

Explanation	Screenshot														
page.															
6. In this variant of the process, the starting point for the transportation process is the creation of the delivery. Choose <i>Create Outbound Deliveries - From Sales Orders</i> to initiate delivery creation.															
7. Filter the Sales Orders Due for Delivery list by the Ship-to-Party from your sales order to initiate delivery creation. Choose <i>Go</i>, if you are satisfied with your selection criteria.	 <table><tr><th>Planned Creation Date</th><th>Sales Document</th><th>Planned GI Date</th><th>Priority</th><th>Shipping Point</th><th>Ship-To Party</th><th>Gross Weight</th></tr><tr><td>08.09.2023</td><td>361</td><td>12.09.2023</td><td>Low (03)</td><td>Shipping Point 1010 (1010)</td><td>Omega Company (C010-011)</td><td>1.247.000 KG</td></tr></table>	Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight	08.09.2023	361	12.09.2023	Low (03)	Shipping Point 1010 (1010)	Omega Company (C010-011)	1.247.000 KG
Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight									
08.09.2023	361	12.09.2023	Low (03)	Shipping Point 1010 (1010)	Omega Company (C010-011)	1.247.000 KG									
8. Choose <i>Create Deliveries</i> to initiate delivery creation for sales order 376.	 <table><tr><th>Planned Creation Date</th><th>Sales Document</th><th>Planned GI Date</th><th>Priority</th><th>Shipping Point</th><th>Ship-To Party</th><th>Gross Weight</th></tr><tr><td>13.09.2023</td><td>376</td><td>15.09.2023</td><td>Normal (02)</td><td>Shipping Point 1010 (1010)</td><td>TMB599-01 (TMB599-01)</td><td>13.700.000 KG</td></tr></table>	Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight	13.09.2023	376	15.09.2023	Normal (02)	Shipping Point 1010 (1010)	TMB599-01 (TMB599-01)	13.700.000 KG
Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight									
13.09.2023	376	15.09.2023	Normal (02)	Shipping Point 1010 (1010)	TMB599-01 (TMB599-01)	13.700.000 KG									

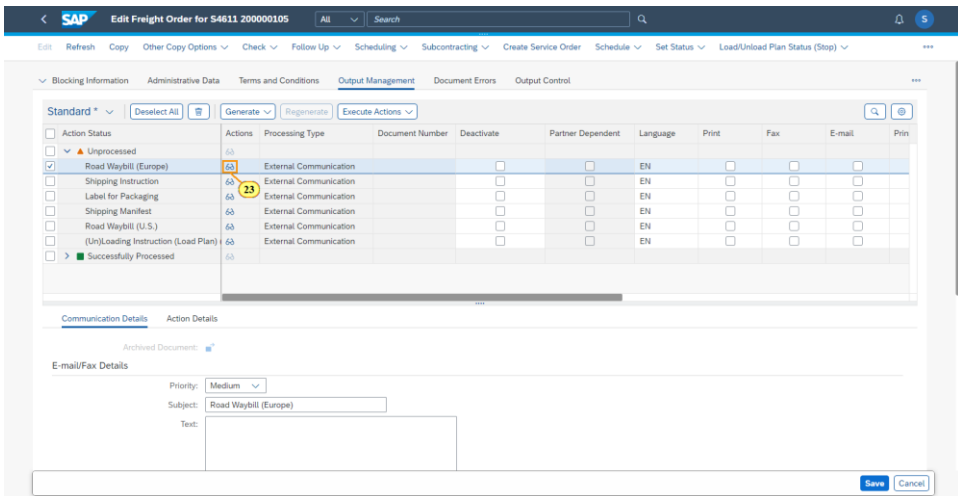

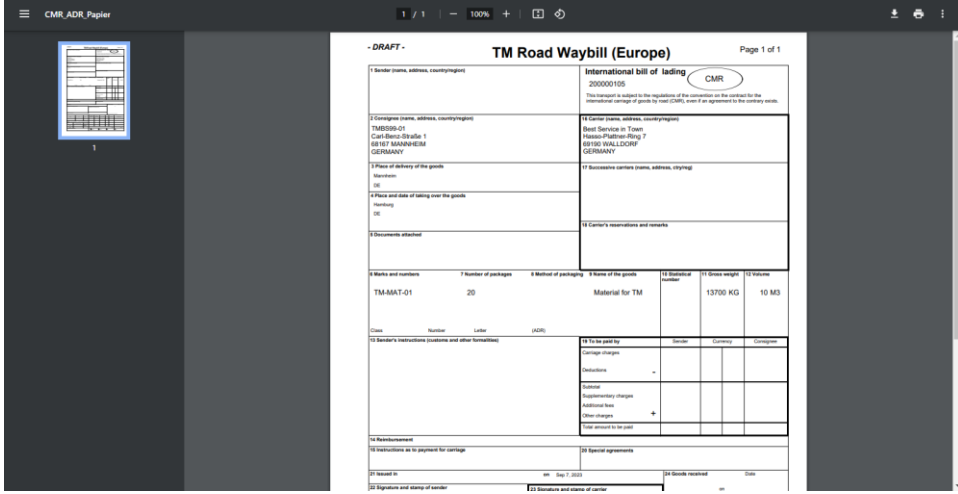

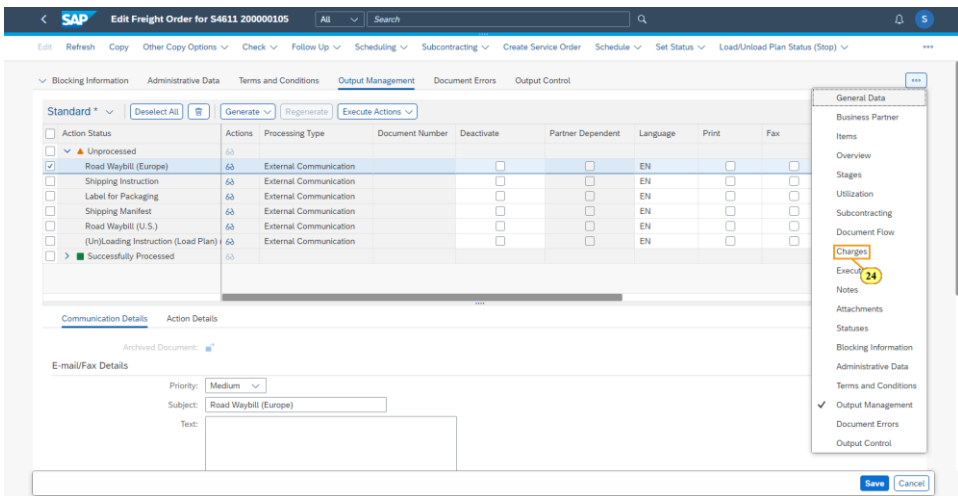

Explanation	Screenshot
9. Choose <i>Display Log</i> to find out the delivery number, that has been created.	 The screenshot shows the SAP 'Create Outbound Deliveries' interface. At the top, there are search filters for Ship-to Party, Shipping Point, Planned Creation Date, Priority, Sales Document, and Relevant for TM. Below these, there are buttons for 'Create Deliveries (0)', 'Display Log', and 'Schedule Delivery Creation'. The 'Display Log' button is highlighted with a yellow circle and the number 9. Below the buttons, there is a table with columns for Planned Creation Date, Sales Document, Planned GI Date, Priority, Shipping Point, Ship-to Party, and Gross Weight. The table is currently empty, with a message 'No data found. Try adjusting the search or filter criteria.'
10. Delivery 8000162 has been created. Choose SAP to return to the home page.	 The screenshot shows the SAP 'Analyze Delivery Logs' interface. On the left, there are search filters for Log Number, Created By, Created On, Shipping Point, and Log Status. Below these, there is a button for 'Go' and 'Adapt Filters (1)'. The 'Delivery Logs (1)' section shows a table with columns for Log Number and a list of sales orders due. The 'Log Number' 3865 is selected. On the right, there is a detailed view for the selected log number 3865, showing creation date, shipping point, warehouse, gross weight, and volume. Below this, there are tabs for 'Messages' and 'Deliveries'. The 'Deliveries' tab is active, showing a table with columns for Document, Item, Message Type, Message Text, and Long Text A... The table is currently empty, with a message 'No messages found.'
11. In the basic transportation management process freight orders are created manually. Choose <i>Create Road Freight Order</i> to create a freight order.	 The screenshot shows the SAP 'Home' interface. At the top, there is a navigation bar with tabs for Order Management, Logistics Integration, Planning, Settlement, Contract Management, Charge Management, TM Master Data, Profiles and Settings, Sales Documents, and Shipping and Warehouse. Below the navigation bar, there is a grid of tiles for various transportation management tasks. The 'Create Road Freight Order' tile is highlighted with a yellow circle and the number 11. Other tiles include 'Freight Orders Worklist', 'Freight Bookings Worklist', 'Service Orders Worklist', 'Edit Road Freight Order', 'Freight Order Execution Overview Page', 'Freight Order Quantity Analysis Overview Page', 'Create Ocean Freight Booking', 'Edit Ocean Freight Booking', and 'Tendering Worklist'. At the bottom, there is a row of buttons for 'Create Service Order', 'Edit Service Order', 'Consignment Orders Worklist', 'Create Consignment Order', 'Edit Consignment Order', 'Create Rail Freight Order', 'Edit Rail Freight Order', and 'Forwarding Orders Worklist'.

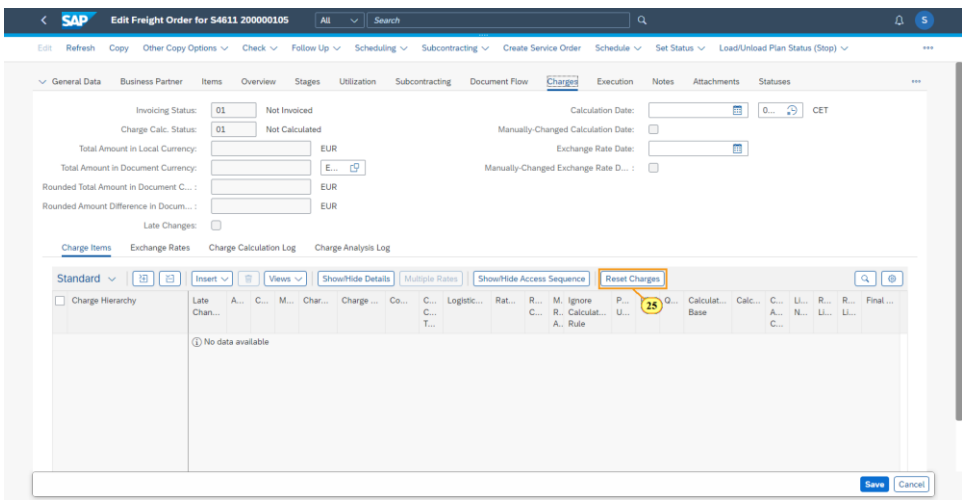

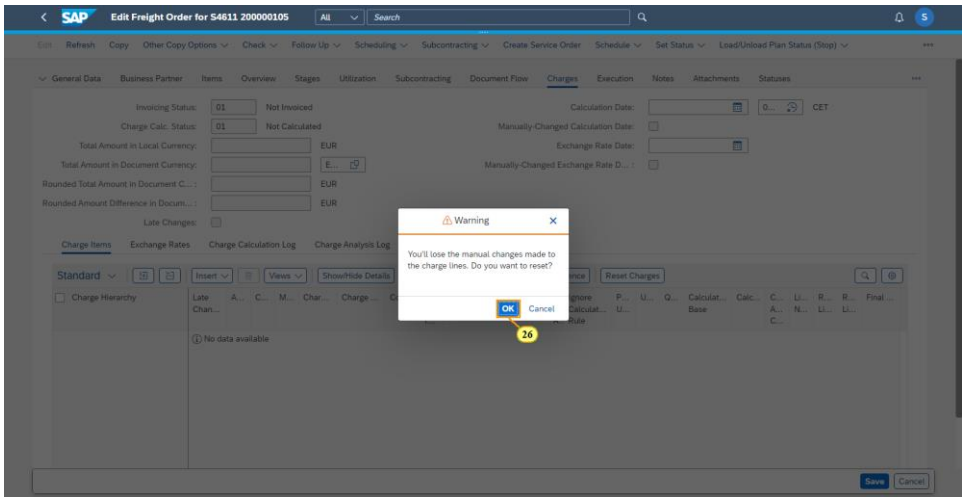

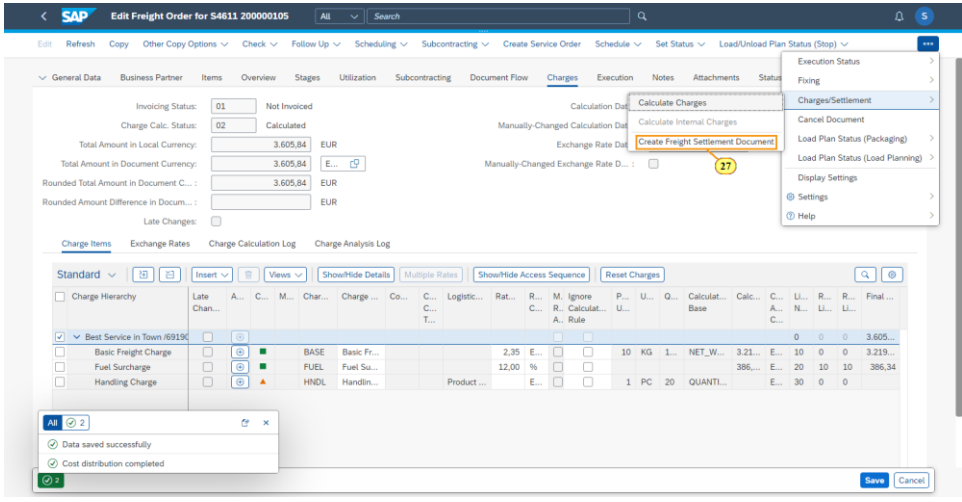

Explanation	Screenshot
12. Freight orders are created based on a document type. Enter Freight Order Type TM99 in the box.	
13. The freight order has been created with document type TM99. Choose <i>Items</i> to navigate to the Items tab.	
14. On the Items tab you can define which vehicle type you want to choose for this freight order. You do so by highlighting the Active Vehicle row in the hierarchy and fill the Vehicle Group/Type field in the Details section. Choose the <i>Vehicle Type</i> field to open the value help.	

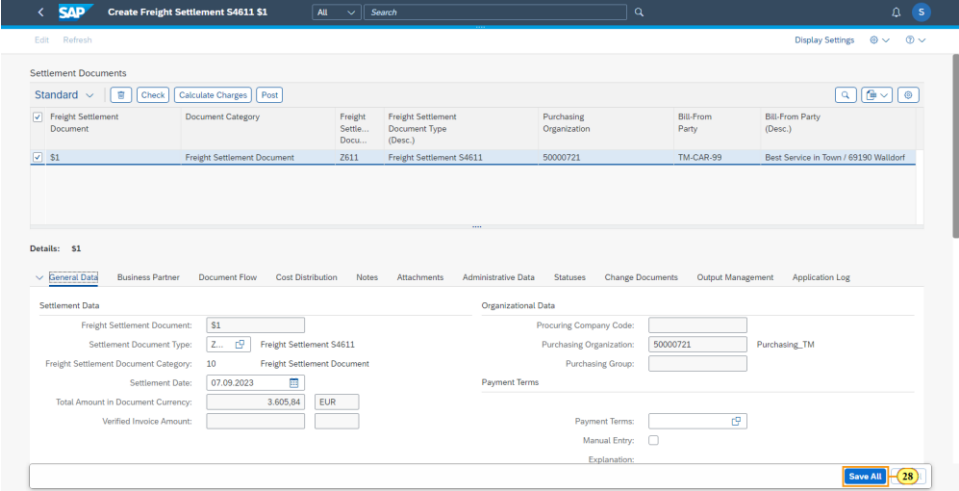

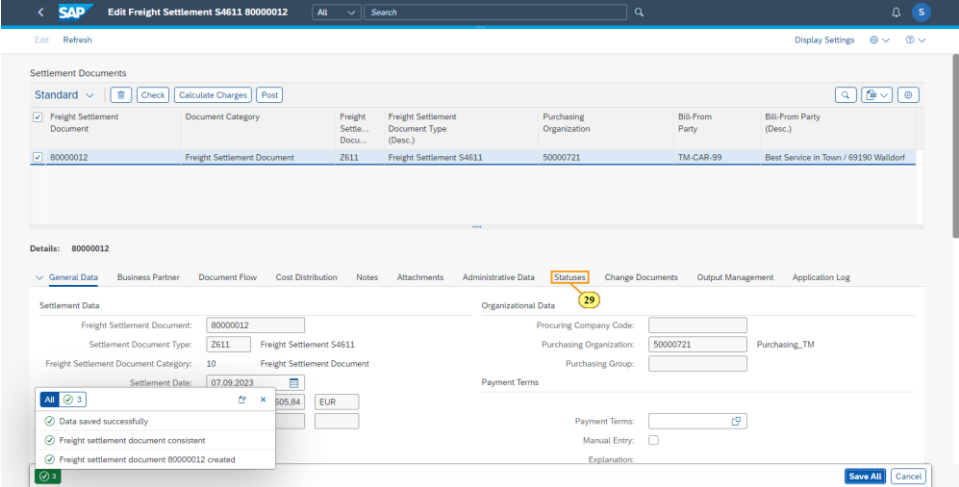

Explanation	Screenshot
15. In the pop-up window you can select among the vehicle types that have been defined in your system. Select equipment type <i>ZTRUCK</i>.	
16. The vehicle type defines the maximum payload weight and cubic capacity of your truck. Next you want to load the delivery to the truck. In order to do so choose <i>Insert FUs Based on Base Document ID</i>.	
17. You can load multiple deliveries at the same time by entering the delivery numbers into the pop-up window. Choose <i>OK</i> when done.	

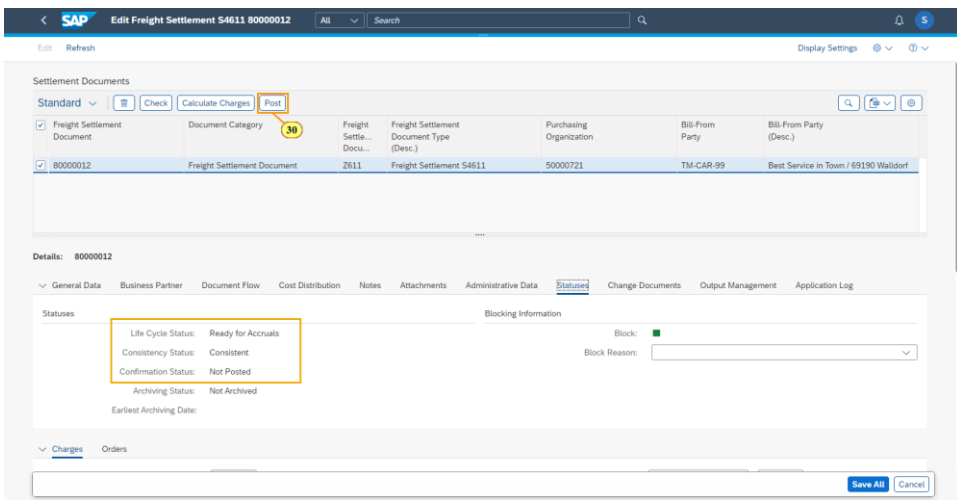

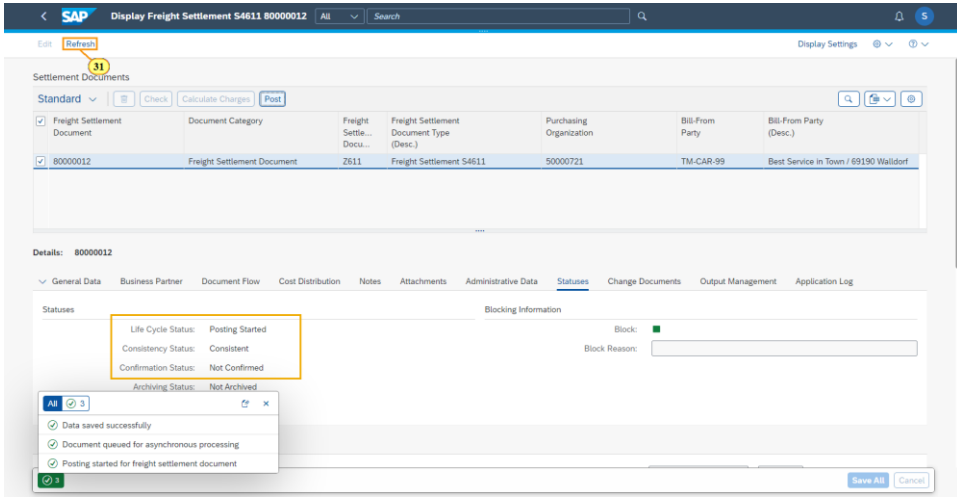

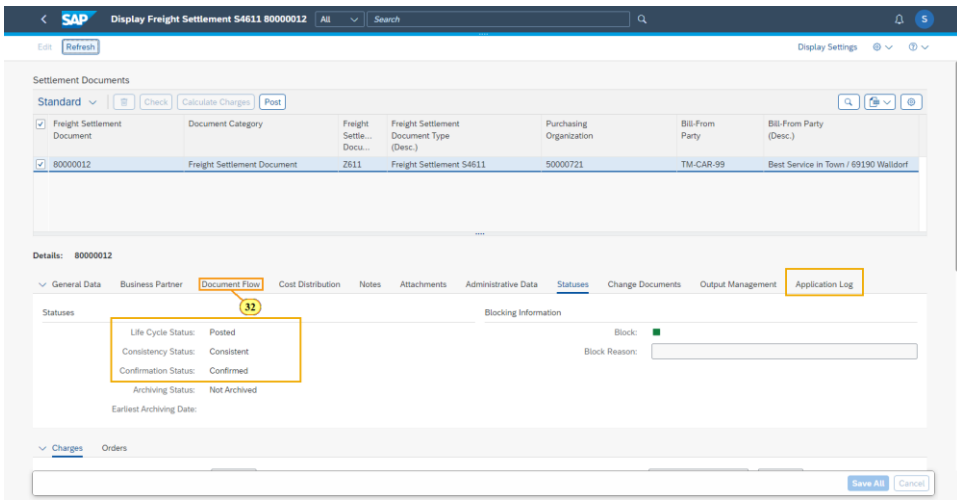

Explanation	Screenshot
18. The freight unit has been inserted into the item hierarchy. Choose <i>General Data</i> to navigate to the General Data tab.	
19. On the General Tab of the freight order you get an overview about the freight order. You find cargo information here (weight, volume) as well as capacity related information (total, consumed, remaining) in different dimensions (weight, volume). Also logistical information like the total distance and duration of the freight order as well as the assigned carrier are available here. Carrier TM-CAR-99 is assigned to this freight order. Choose Save when done.	

Explanation	Screenshot
20. After the freight order has been subcontracted, its execution can start. Choose <i>Set to Ready for Transportation Execution</i> to indicate that the freight order is now ready for transportation execution.	 The screenshot shows the SAP 'Edit Freight Order' interface for order S4611 200000105. The 'Set Status' dropdown menu is open, and 'Set to Ready for Transportation Execution' is highlighted. The background shows various data fields for the freight order, including truck details, cargo information, and general information.
21. Choose Save to save the status change.	 The screenshot shows the same SAP interface. The 'Save' button is visible in the bottom right corner. A small confirmation message box is displayed at the bottom left, stating 'Ready for execution check completed without error...' and 'Execution status of doc. Freight Order for S4611...'.
22. Navigate to the <i>Output Management</i> tab to check the readiness of print documents.	 The screenshot shows the SAP interface with the 'Output Management' tab selected in the left sidebar. The 'Save' button is visible in the bottom right corner. A small confirmation message box is displayed at the bottom left, stating 'Data saved successfully'.

Explanation	Screenshot
23. The system has prepared several output documents. On the Output Management tab you can preview these documents, change their language, print, fax and e-mail them. Choose <i>Actions - Display</i> to review the CMR road waybill (a standard document for road transport in Europe).	
 The document has been prepared as a PDF document. It includes information about the shipper, consignee, carrier, material to be transported etc. Choose <i>Next</i> to return to the freight order.	
24. To check the freight charges that have been calculated for the freight order navigate to the <i>Charges</i> tab.	

Explanation	Screenshot
25. Choose <i>Reset Charges</i> to initiate charge calculation.	
26. Choose <i>OK</i> to confirm the pop-up window.	
27. On the Charges tab you check whether all charges have been calculated correctly. You observe that the basic freight charge and fuel surcharge have been automatically calculated. In order to settle freight charges, you have to create a freight settlement document. This can be done interactively	

Explanation	Screenshot
from the freight order or via a background report automatically. Choose <i>Create Freight Settlement Document</i>.	
28. Choose <i>Save All</i> to save the freight settlement document.	
29. Navigate to the <i>Statuses</i> tab to review freight settlement document statuses.	

Explanation	Screenshot
30. The freight settlement document is initially Ready for Accruals. By choosing <i>Post</i>, the accruals will be posted to FI/CO.	
31. The posting triggers an asynchronous process in the background. This is indicated by the life cycle status being Posting Started and confirmation status Not Confirmed. <i>Refresh</i> the screen to review whether posting was successful.	
32. If the posting was successful, this is indicated by life cycle status Posted and confirmation status Confirmed. If posting was not successful, this would have been indicated by corresponding statuses and detailed messages on the Application Log tab. Choose <i>Document</i>	

Explanation	Screenshot
Flow to review the document flow of the full process.	
 The Document Flow tab shows the complete document flow from the perspective of the freight settlement document. Its predecessor business documents are the logistical documents from the sales order at the beginning of the process, via the delivery and freight unit up to the freight order. The successor business documents (purchase order and service entry sheet) have been created to facilitate the financial postings via MM. Choose <i>Next</i> to conclude this demonstration.
