

Calculate and Settle Freight Charges

Explanation	Screenshot
The purpose of this demonstration is to check, whether all freight charges have been calculated correctly, how to add manual charges and settle the freight order. Choose <i>Next</i> to continue.	
1. Choose <i>Edit Road Freight Order</i> to open a freight order to check its freight charges. You can also do the same from a worklist, which allows you to filter for freight orders that have calculation errors or missing information.	
2. Choose <i>Continue</i> to open the road freight order 200000104.	

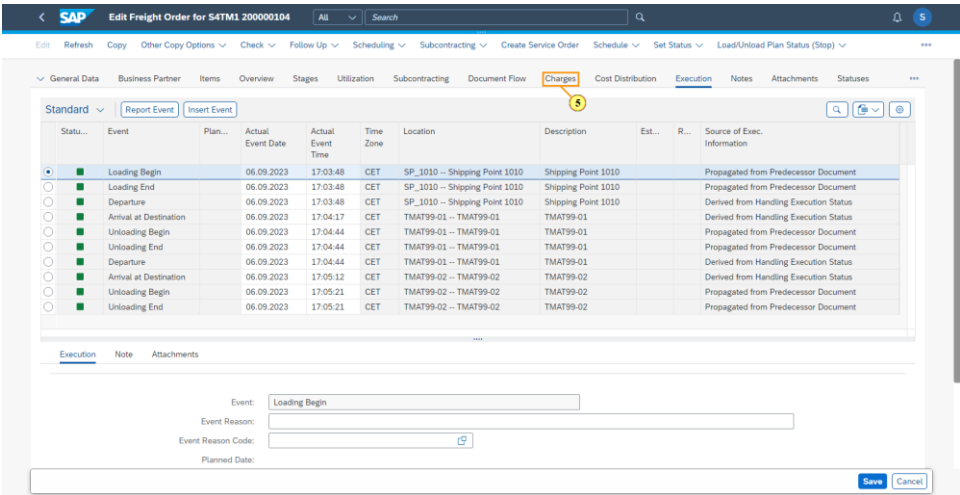

Explanation	Screenshot
3. On the General Tab of the freight order you get an overview about the freight order. You find cargo information here (weight, volume) as well as capacity related information (total, consumed, remaining) in different dimensions (weight, volume). Also logistical information like the total distance and duration of the freight order as well as the assigned carrier are available here. Navigate to the <i>Document Flow</i> to show related documents.	
4. This freight order transports two deliveries (8000160 and 8000161) that originate from two different sales orders (374 and 375). Check the execution of the freight order by navigating to the <i>Execution</i> tab.	

Explanation

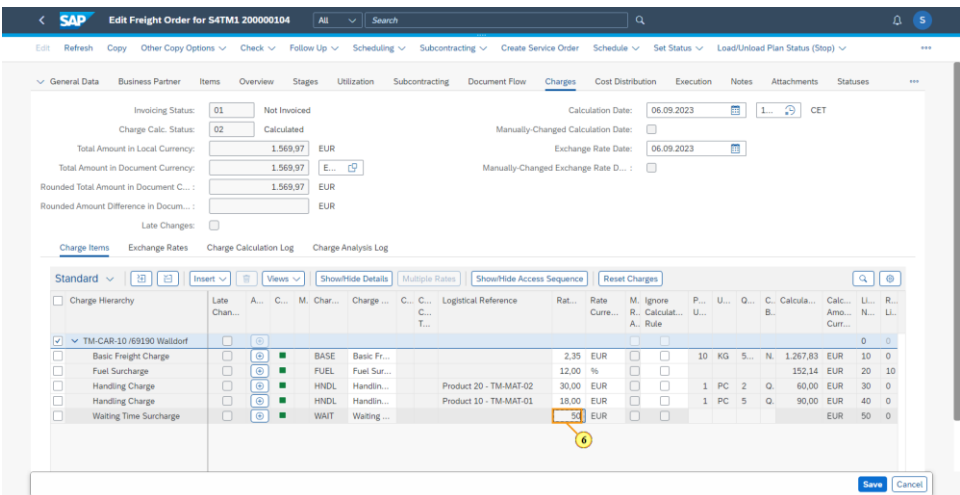

5. On the Execution tab you find that this freight order has already been executed. All events show an actual date and time. That means the two deliveries have been loaded at the shipping point and have been delivered to their respective destinations.

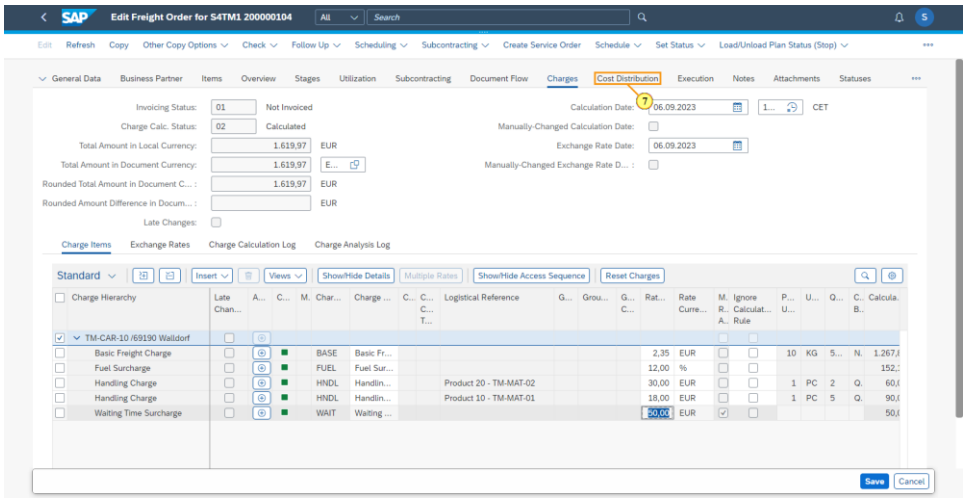

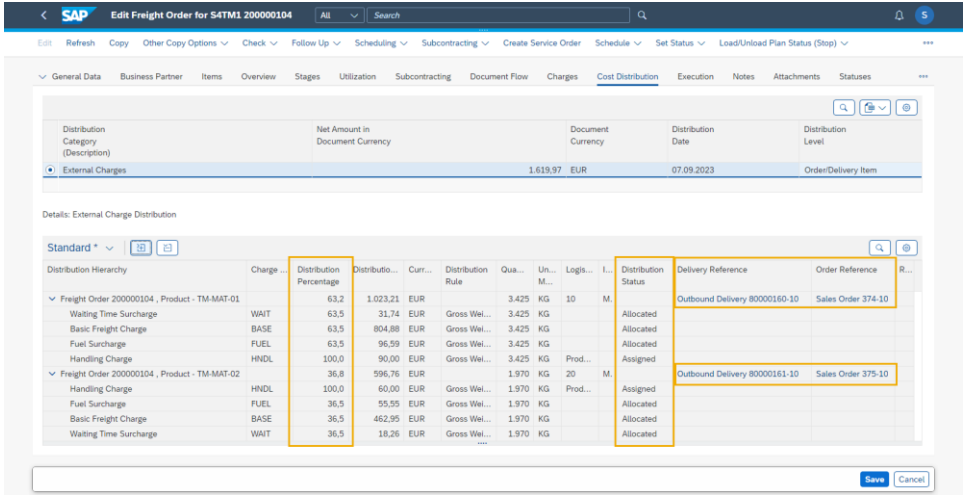

Choose *Charges* to navigate to the Charges tab.

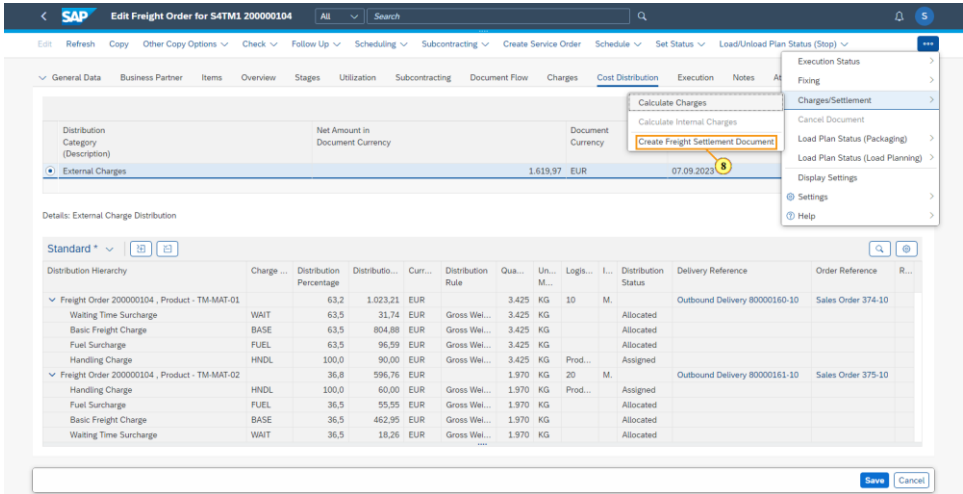

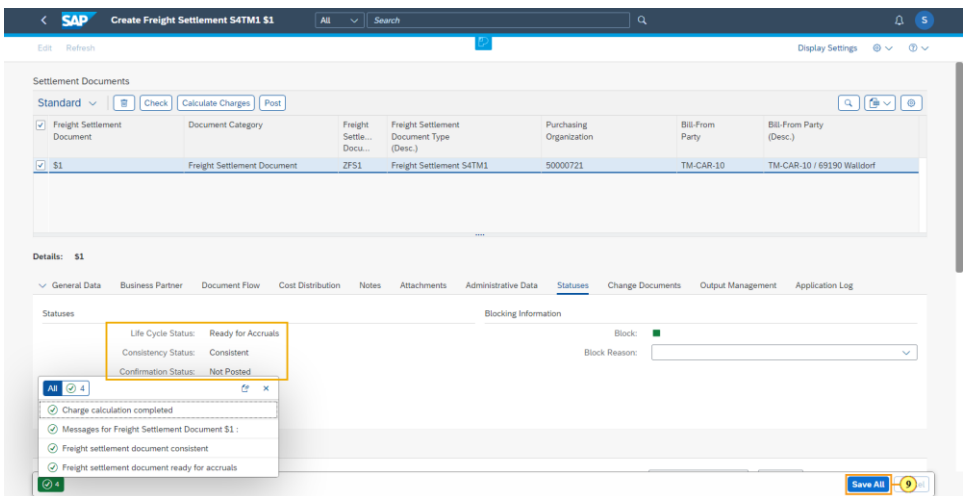

Screenshot

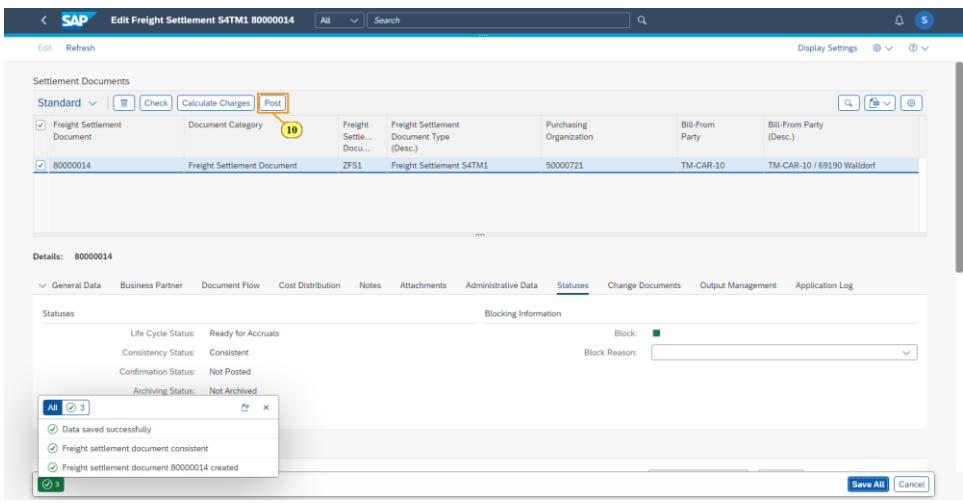

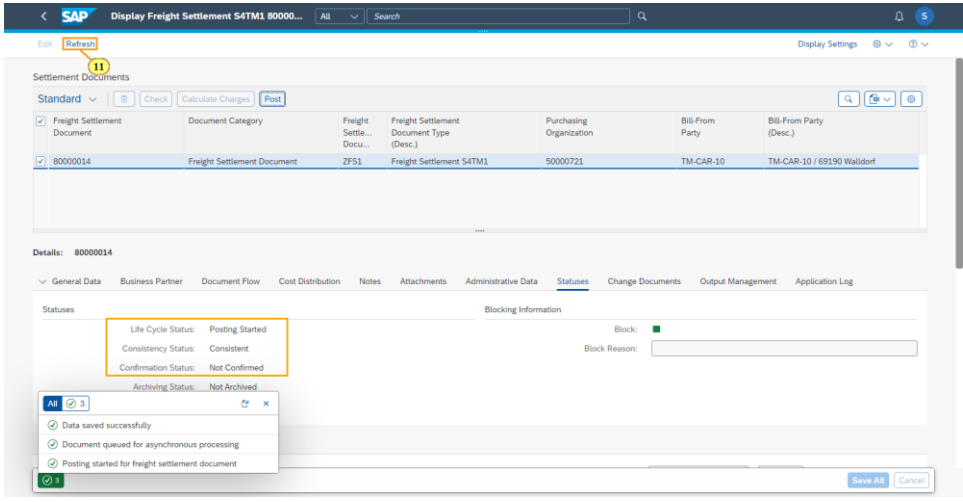

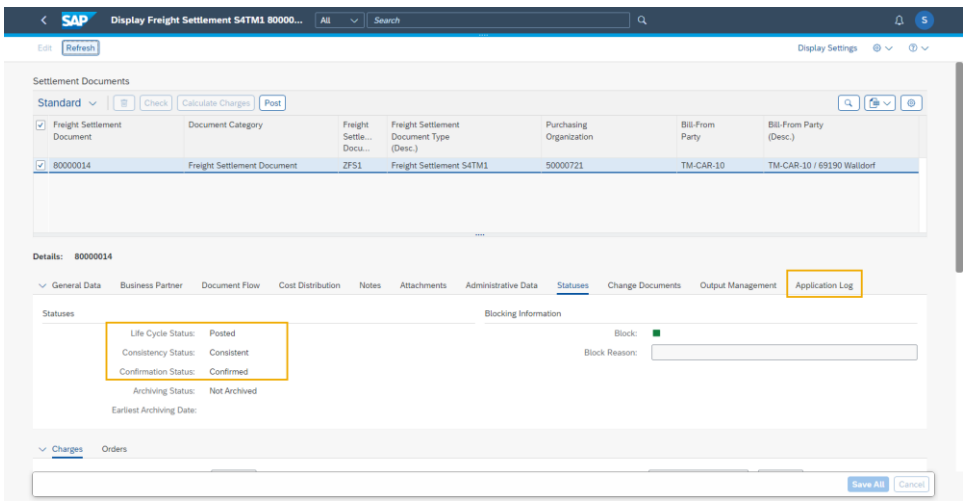

6. On the Charges tab you check whether all charges have been calculated correctly. You observe that the basic freight charge and fuel surcharge have been automatically calculated. You also spot the handling charges which have been calculated with different values for product TM-MAT-01 and TM-MAT-02 (logistical reference). Unfortunately, the warehouse was not ready to load when the carrier arrived. Your warehouse operator has notified

you about the same. Enter 50 in the box. Confirm your entry by pressing the Enter key.	
7. To check that the total freight charges are distributed correctly to the delivery items you navigate to the <i>Cost Distribution</i> tab.	
The cost distribution result shows how the total freight charges have been distributed among the delivery / sales order items that have been transported with this freight order. The basic freight charge, fuel surcharge and waiting time surcharge have been distributed proportionally by gross weight to the delivery/sales order items. The handling charges can be assigned	

Explanation	Screenshot
directly to the delivery/sales order item, because they have been calculated individually for the different materials. Choose <i>Next</i> to continue with the demonstration.	
8. In order to settle freight charges, you have to create a freight settlement document. This can be done interactively from the freight order or via a background report automatically. Choose <i>Create Freight Settlement Document</i> .	
9. The freight settlement document is initially Ready for Accruals. Choose <i>Save All</i> to save the freight settlement document.	

Explanation	Screenshot
10. By choosing <i>Post</i> , the accruals will be posted to FI/CO.	
11. The posting triggers an asynchronous process in the background. This is indicated by the life cycle status being Posting Started and confirmation status Not Confirmed. <i>Refresh</i> the screen to review whether posting was successful.	
 If the posting was successful, this is indicated by life cycle status Posted and confirmation status Confirmed. If posting was not successful, this would have been indicated by corresponding statuses and detailed messages on the Application Log tab.
