

Freight Unit Creation Based on Sales Orders and Deliveries

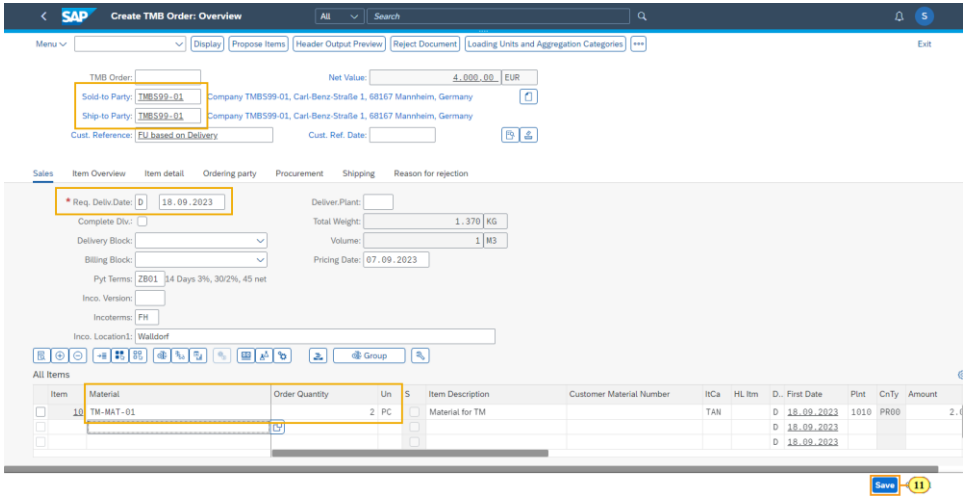

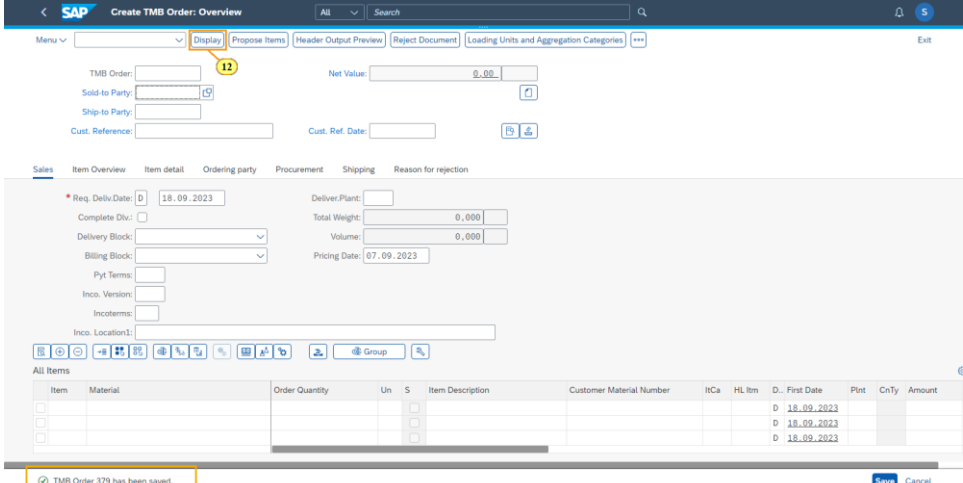

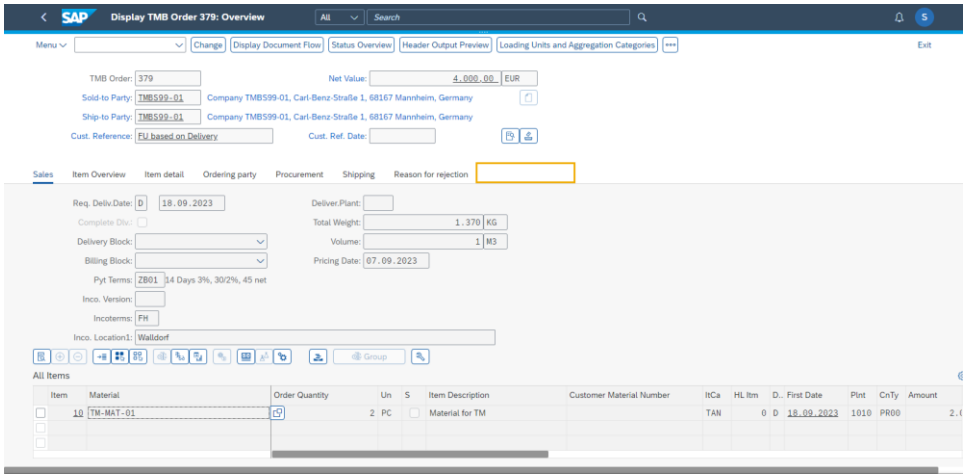

Explanation	Screenshot
 The purpose of this demonstration is to show how freight units are getting created based on sales orders and deliveries. Freight units are the basis for any transportation process and originate from their predecessor documents. Choose <i>Next</i> to continue.	
1. To create a sales order you open the Create Sales Order app.	

Explanation	Screenshot
2. Sales orders are created based on a specific order type and with reference to organizational units. Choose <i>Continue</i> to be able to enter the details of a sales order.	
3. Key information that needs to be maintained in a sales order are the ordering party (sold-to and ship-to), the requested delivery date and the material (type and quantity) to be sold. Once this information has been entered, the sales order can be saved. Choose <i>Save</i>.	

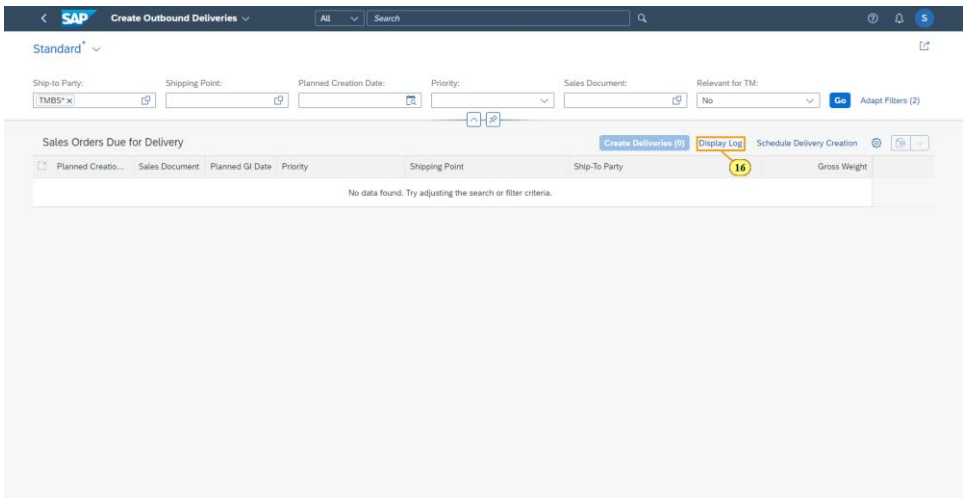

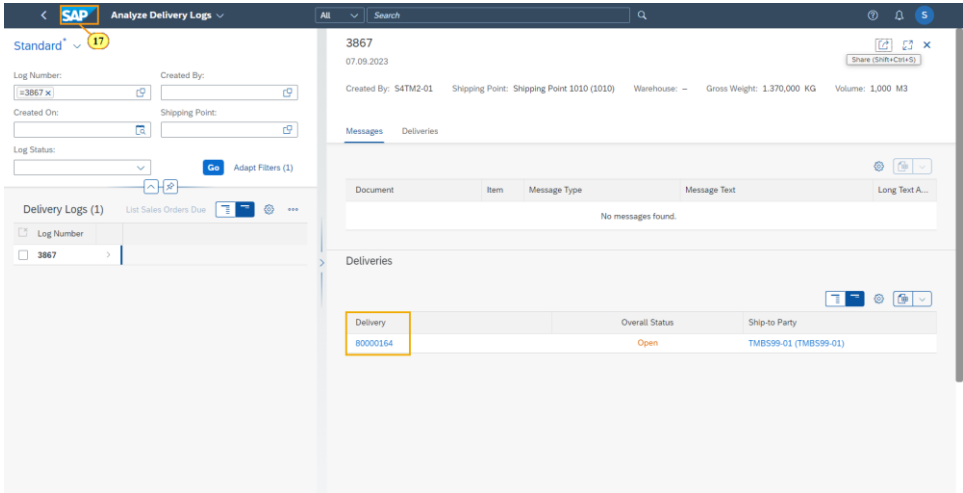

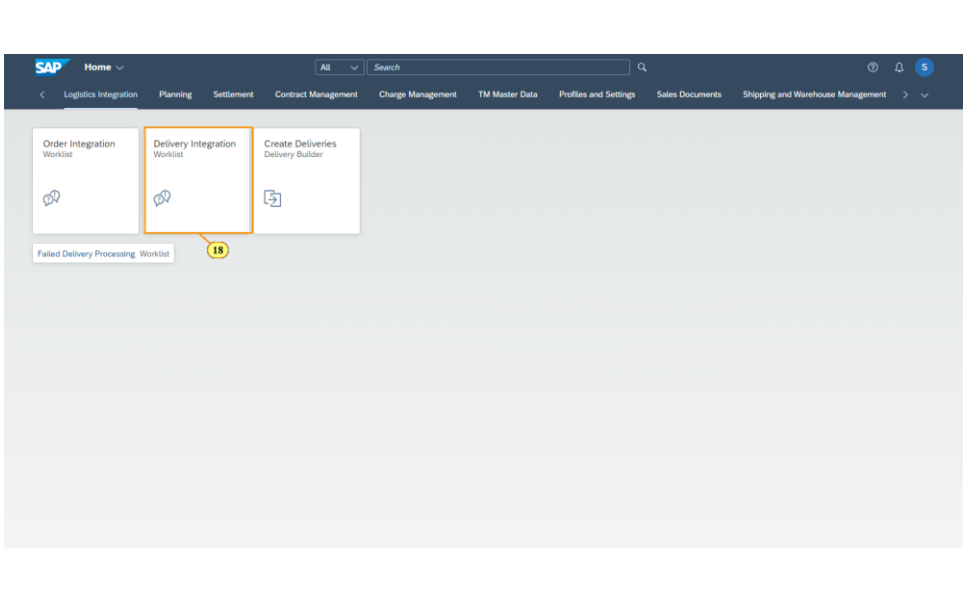

Explanation	Screenshot
4. To Display details related to the sales order 378, that has just been created, choose <i>Display</i> .	
5. In this case, sales order 378 is transportation relevant. Therefore, TM Status information is available, which can be displayed by choosing the <i>TM Status</i> tab.	
6. On the TM Status tab there is information available like the subcontracting status that indicates, whether the related transport for this sales order has been subcontracted to a third party, or the execution status, that indicates whether execution of transportation processes for this sales order have	

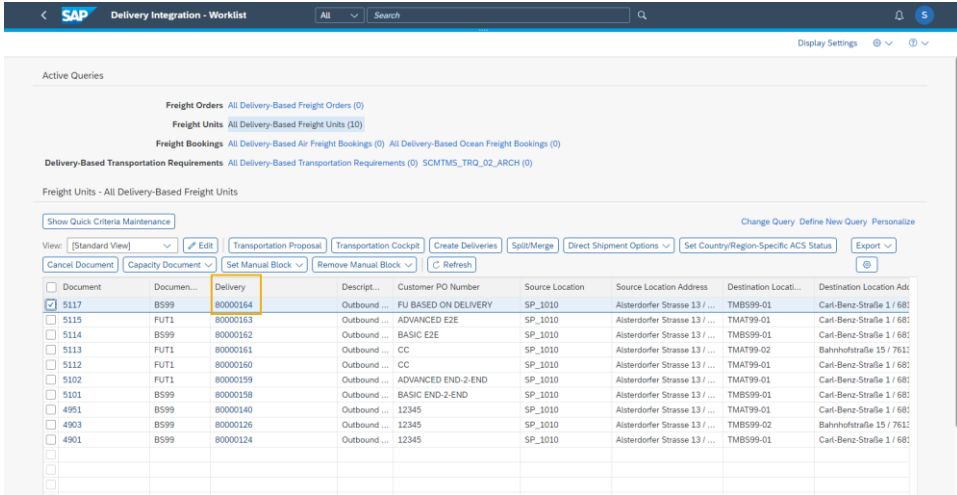

Explanation	Screenshot
started, are currently in process or have already been finished. Choose <i>SAP</i> to return to your home page.	
7. The order integration worklist shows all freight units, that have been created based on orders (sales order, purchase orders or stock transfer orders). It represents the workload for the transportation planner. Choose <i>Order Integration - Worklist</i>.	
8. The freight unit (5116) that has been created for sales order 378 shows on top of the order integration worklist. Choose <i>SAP</i> to return to the home page and conclude the first part of this demonstration.	

Explanation	Screenshot												
9. To create another sales order you open the <i>Create Sales Order</i> app.	 The screenshot shows the SAP Home dashboard. The 'Create Sales Orders VA01' app is highlighted with a yellow box. A yellow circle with the number 9 is positioned below the box. Other apps visible include 'Manage Sales Orders' (305), 'Change Sales Orders VA02', 'Display Sales Orders VA03', 'Manage Sales Inquiries' (0), 'Manage Sales Quotations' (4), 'Manage Sales Quotations Version 2' (4), and 'Manage Credit Memo Requests' (2).												
10. Sales orders are created based on a specific order type and with reference to organizational units. Note, that a different order type is used than before to illustrate the difference in the process between freight units based on orders and freight units based on deliveries. Choose <i>Continue</i> to be able to enter the details of a sales order.	 The screenshot shows the 'Create Sales Documents' app. The 'Order Type' is set to 'ztab'. The 'Organizational Data' section shows the following values: Sales Organization: 1010, Distribution Channel: 10, Division: 00 LV. A search results table is displayed below the organizational data. <table><tr><th colspan="4">Search Results</th></tr><tr><th>Dv</th><th>SOrg</th><th>DCh</th><th>Name</th></tr><tr><td>00</td><td>1010</td><td>10</td><td>Cross Division</td></tr></table> At the bottom right, there is a 'Continue' button and a yellow circle with the number 10.	Search Results				Dv	SOrg	DCh	Name	00	1010	10	Cross Division
Search Results													
Dv	SOrg	DCh	Name										
00	1010	10	Cross Division

11. Key information that needs to be maintained in a sales order are the ordering party (sold-to and ship-to), the requested delivery date and the material (type and quantity) to be sold. Once this information has been entered, the sales order can be saved. Choose Save.	 The screenshot shows the 'Create TMB Order: Overview' screen in SAP. The 'Sold to Party' and 'Ship to Party' fields are highlighted with a yellow box. The 'Req. Deliv. Date' field is also highlighted. The 'Save' button is circled in yellow.
12. To Display details related to the sales order 379, that has just been created, choose <i>Display</i>.	 The screenshot shows the 'Create TMB Order: Overview' screen in SAP. The 'Display' button is highlighted with a yellow box. A message at the bottom states 'TMB Order 379 has been saved.'
 In this case, sales order 379 is NOT transportation relevant. Therefore, no TM Status information is available, which can be displayed by choosing the TM Status tab. Choose <i>Next</i> to continue.	 The screenshot shows the 'Display TMB Order 379: Overview' screen in SAP. The 'TM Status' tab is highlighted with a yellow box.

Explanation	Screenshot														
13. Another process variant for starting the transportation process is the creation of the delivery. Choose the <i>Create Outbound Deliveries - From Sales Orders</i> app to initiate delivery creation.															
14. Filter the Sales Orders Due for Delivery list by the Ship-to-Party from your sales order to initiate delivery creation. Choose Go, if you are satisfied with your selection criteria.															
15. Choose Create Deliveries to initiate delivery creation for sales order 379.	<table><tr><th>Planned Creation Date</th><th>Sales Document</th><th>Planned GI Date</th><th>Priority</th><th>Shipping Point</th><th>Ship-To Party</th><th>Gross Weight</th></tr><tr><td>13.09.2023</td><td>379</td><td>15.09.2023</td><td>Normal (02)</td><td>Shipping Point 1010 (1010)</td><td>TMB599-01 (TMB599-01)</td><td>1.370.000 KG</td></tr></table>	Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight	13.09.2023	379	15.09.2023	Normal (02)	Shipping Point 1010 (1010)	TMB599-01 (TMB599-01)	1.370.000 KG
Planned Creation Date	Sales Document	Planned GI Date	Priority	Shipping Point	Ship-To Party	Gross Weight									
13.09.2023	379	15.09.2023	Normal (02)	Shipping Point 1010 (1010)	TMB599-01 (TMB599-01)	1.370.000 KG									

Explanation	Screenshot
16. Choose <i>Display Log</i> to find out the delivery number, that has been created.	
17. Delivery 8000164 has been created. Choose <i>SAP</i> to return to the home page.	
18. When the sales order is transportation relevant, we have found the freight units in the order integration worklist. A similar worklist is available when the process is initiated by the delivery. Choose <i>Delivery Integration - Worklist</i> to open the worklist.	

Explanation	Screenshot
 The delivery integration worklist shows all freight units, that have been created based on deliveries (outbound deliveries, inbound deliveries). It represents the workload for the transportation planner. The freight unit (5117) that has been created for delivery 80000164 shows on top of the delivery integration worklist. Choose <i>Next</i> to conclude this demonstration.	 The screenshot displays the SAP 'Delivery Integration - Worklist' interface. At the top, there's a navigation bar with the SAP logo and a search bar. Below this, a section titled 'Active Queries' lists various query types like 'Freight Orders', 'Freight Units', 'Freight Bookings', and 'Delivery-Based Transportation Requirements'. The main section is titled 'Freight Units - All Delivery-Based Freight Units'. It features a toolbar with buttons for 'Show Quick Criteria Maintenance', 'Change Query', 'Define New Query', and 'Personalize'. Below the toolbar, there's a table of freight units. The first row is highlighted, showing freight unit 5117, document B599, delivery 80000164, and description 'FU BASED ON DELIVERY'. The table includes columns for Document, Documen..., Delivery, Descript..., Customer PO Number, Source Location, Source Location Address, Destination Locati..., and Destination Location Adk.
